Chapter 2 : Soo-Hoon Lee - Old Dominion University

Theoretical Developments and Future Research in Family Business. A Theoretical Framework on the Role of HRM Practices in Family Business Succession, Soo-Hoon Lee.

RD also highlights a number of strategies that organizations can utilize to deal with problematic dependence relationships; empirical research in this tradition has largely focused on this catalog of strategies. This bibliography is organized by the topic areas covered in External Control and displays representative and impactful work associated with each topic. Foundational Works RD was an attempt to synthesize two somewhat divergent views concerning the context of organizational change: Yuchtman and Seashore also linked power to resources in the external environment in a way that anticipated RD. Thus, while External Control is widely considered the crystallizing statement in resource dependence, the theory is crucially informed by a number of earlier works. Power and dependence are the obverse of each other: B is dependent on A to the degree that A has power over B. Power is not zero-sum: A and B can each have power over each other, making them interdependent. Schneck, and Johannes M. The authors argue that power accrues to those subunits in the organization best able to reduce uncertainties for the organization. This general line of argumentation informed much of the discussion of intra-organizational power in External Control. Yuchtman, Ephraim, and Stanley E. The imperative for organizations to avoid dependence on external parties is also implicit in their argument. A Framework for Comparative Analysis. Vanderbilt University Press, Organizations are both economic and political systems, and power and authority are dispersed throughout the web of interactions comprising its environment. Pfeffer and Salancik leveraged these insights to argue that firms should engage in political activity to alter their environment. Banegil Palacios Universidad de Extremadura Ramon Sanguino Galvan Universidad de Extremadura Abstract Family businesses are created due to the entrepreneurial behavior of one or more founders, who find and exploit one opportunity. It is necessary that this Entrepreneurial Orientation EO is transmitted to the next generation. We argue that knowledge management within the family business is positively related to entrepreneurial orientation and, therefore, related to firm performance. A scale for measuring the knowledge transfer has been defined in order to determine the degree of relationship between the above elements. The measuring instrument is original because previous measuring scales do not exist in the literature which measure, on the one hand, the subconstructs that might lead knowledge transfer and, on the other hand, the relationship between this and the other variables. As a result of causal relationship analysis, it concludes with a scale, with a sample of Spanish family firms, and it is the first empirical validation of these dimensions we know so far. Chapter 4 : John Butler | Shidler College of Business |

This paper examines critical challenge of succession in Australian family business and shows that business size is the professional component supported by incumbent, successor, and nonfamily members as having a significant impact on succession process.

A volume in the series: Research in Entrepreneurship and Management. Butler, Hong Kong Polytechnic University. Published Until recently, research in family business has been confined to a sub-group of entrepreneurship scholars, labor economists, and sociologists. These issues are typically framed in terms of the generational transfer of wealth, management succession, or the interplay between the economic system of a family and its sociopolitical system. The phenomenon is clearly widespread but for some reason continues to be poorly understood. We believe that progress on the empirical front has been hampered by a lack of accepted theoretical frameworks. For example, attempts to employ agency theory, geographic agglomeration and spill overs, social networks, sense making, bargaining and other frameworks have been scattered. In our view, the extant research has not created the theoretic ballast that can withstand repeated empirical verification. More fundamentally, researchers are beginning to ask, "Is family business theoretically distinctive or a convenient phenomenon for exploiting familiar theories with new data? Review articles grounded in economics, sociology, psychology and political economy and that offer multidisciplinary implications are especially sought. Theory based empirical papers are also welcomed. We believe that there are exciting opportunities for theory development and so encourage authors to focus on this in their submissions. In sum, the focus of this volume is on showcasing and advancing the latest research in family business. Wither the Family Enterprise? Suggestions for Future Research, Phillip H. Phan and John E. No Family is an Island: Butler, and Borje O. Family Involvement in Family Firms: Antecedents and Moderators, Hung-Bin Ding. Chapter 5 : IAP || Book || Theoretical Developments and Future Research in Family Business

This study addresses the importance of understanding business succession planning by proposing and empirically verifying a model of succession planning and firm effectiveness in the family business.

Chapter 6 : Resource-Dependence Theory - Management - Oxford Bibliographies

Re-framing the status of narrative in family business research: Towards an understanding of families in business pp. Eleanor Hamilton, Allan Discua Cruz and Sarah Jack The effect of intrafamily agency conflicts on audit demand in private family firms: The moderating role of the board of directors pp.

Chapter 7 : Recent Journal of Family Business Strategy Articles - Elsevier

This paper explores a theoretical framework for HRM that we term "employee equity." Adapting the customer equity concept from marketing, the framework shifts the primary unit of analysis from tasks to people.
