Nominations[edit] Nomination forms are sent by the Nobel Committee to about 3, individuals, usually in September the year before the prizes are awarded. These individuals are generally prominent academics working in a relevant area. Regarding the Peace Prize, inquiries are also sent to governments, former Peace Prize laureates, and current or former members of the Norwegian Nobel Committee. The deadline for the return of the nomination forms is 31 January of the year of the award. All nomination records for a prize are sealed for 50 years from the awarding of the prize. This, along with the list of preliminary candidates, is submitted to the prize-awarding institutions. Their decision, which cannot be appealed, is announced immediately after the vote. Except for the Peace Prize, which can be awarded to institutions, the awards can only be given to individuals. This has occurred twice: Since , laureates must be thought alive at the time of the October announcement. There has been one laureate, William Vickrey , who in died after the prize in Economics was announced but before it could be presented. Steinman , had died three days earlier. Early on, the awards usually recognised recent discoveries. For example, Johannes Fibiger was awarded the Prize in Physiology or Medicine for his purported discovery of a parasite that caused cancer. The Literature Prize is typically awarded to recognise a cumulative lifetime body of work rather than a single achievement. For example, laureate Martti Ahtisaari was awarded for his work to resolve international conflicts. Sometimes, this takes decades â€” for example, Subrahmanyan Chandrasekhar shared the Physics Prize for his s work on stellar structure and evolution. Some discoveries can never be considered for a prize if their impact is realised after the discoverers have died. The award ceremonies and the associated banquets are typically major international events. It is said that he changed his mind once his attention had been drawn to the publicity value of the prizes for Sweden. Apart from the laureate, guests include the President of the Storting , the Swedish prime minister, and, since , the King and Queen of Norway. In total, about guests attend. Nobel lecture[edit] According to the statutes of the Nobel Foundation, each laureate is required to give a public lecture on a subject related to the topic of their prize. The laureate is only obliged to give the lecture within six months of receiving the prize. Some have happened even later. In , the Mint of Norway, located in Kongsberg, made the medals. The Nobel Prize medals are registered trademarks of the Nobel Foundation. The medals for physics, chemistry, physiology or medicine, and literature have identical obverses, showing the image of Alfred Nobel and the years of his birth and death. The reverse sides of the medals for chemistry and physics share the same design. All medals made before were struck in 23 carat gold. Since then, they have been struck in 18 carat green gold plated with 24 carat gold. The weight of each medal varies with the value of gold, but averages about grams 0. The diameter is 66 millimetres 2. When Germany invaded Denmark, Hungarian chemist and Nobel laureate himself George de Hevesy dissolved them in aqua regia nitro-hydrochloric acid , to prevent confiscation by Nazi Germany and to prevent legal problems for the holders. After the war, the gold was recovered from solution, and the medals re-cast. Each diploma is uniquely designed by the prize-awarding institutions for the laureates that receive them. None of the Nobel Peace Prize laureates has ever had a citation on their diplomas. The purse has increased since the s, when the prize money was , SEK per prize c. If there are three, the awarding committee has the option of dividing the grant equally, or awarding one-half to one recipient and one-quarter to each of the others. Among other criticisms, the Nobel Committees have been accused of having a political agenda, and of omitting more deserving candidates. They have also been accused of Eurocentrism , especially for the Literature Prize. This led to the resignation of two Norwegian Nobel

Committee members. However, when the award was announced, both sides were still engaging in hostilities. Ahnlund resigned, alleging that the selection of Jelinek had caused "irreparable damage to all progressive forces, it has also confused the general view of literature as an art". According to The Washington Post , many US literary critics and professors were ignorant of her work. The previous year, Dr. Walter Freeman had developed a version of the procedure which was faster and easier to carry out. Gandhi could do without the Nobel Peace prize. Whether Nobel committee can do without Gandhi is the question". He consulted staff and later replied that he would. At the same time, Chairman Gunnar Jahn.

The family was impoverished, and only Alfred and his three brothers survived past childhood. He invented veneer lathe and started work on the torpedo. Now prosperous, his parents were able to send Nobel to private tutors and the boy excelled in his studies, particularly in chemistry and languages, achieving fluency in English, French, German and Russian. There he met Ascanio Sobrero, who had invented nitroglycerin three years before. Sobrero strongly opposed the use of nitroglycerin, as it was unpredictable, exploding when subjected to heat or pressure. But Nobel became interested in finding a way to control and use nitroglycerin as a commercially usable explosive, as it had much more power than gunpowder. Nobel and his parents returned to Sweden from Russia and Nobel devoted himself to the study of explosives, and especially to the safe manufacture and use of nitroglycerin. Nobel invented a detonator in 1863, and in 1864 designed the blasting cap. Dynamite was patented in the US and the UK and was used extensively in mining and the building of transport networks internationally. Nobel invested in these and amassed great wealth through the development of these new oil regions. During his life Nobel was issued patents internationally and by his death his business had established more than 90 armaments factories, despite his belief in pacifism. One French newspaper published an obituary titled "Le marchand de la mort est mort" "The merchant of death is dead". Nobel read the obituary and was appalled at the idea that he would be remembered in this way. His decision to posthumously donate the majority of his wealth to found the Nobel Prize has been credited at least in part to him wanting to leave a better legacy. Though her personal contact with Alfred Nobel had been brief, she corresponded with him until his death in 1896, and it is believed that she was a major influence in his decision to include a peace prize among those prizes provided in his will. They were released only in 1954, to be included with other biographical data. He also developed sufficient literary skill to write poetry in English. The entire stock except for three copies was destroyed immediately after his death, being regarded as scandalous and blasphemous. The first surviving edition bilingual Swedish– Esperanto was published in Sweden in 1908. The play has been translated into Slovenian via the Esperanto version and into French. Nobel later combined nitroglycerin with various nitrocellulose compounds, similar to collodion, but settled on a more efficient recipe combining another nitrate explosive, and obtained a transparent, jelly-like substance, which was a more powerful explosive than dynamite. Nobel Prizes Main article: Alfred Nobel, who became rich by finding ways to kill more people faster than ever before, died yesterday. For many years, the Swedish Academy interpreted "ideal" as "idealistic" idealistisk and used it as a reason not to give the prize to important but less romantic authors, such as Henrik Ibsen and Leo Tolstoy. In his one-page testament, he stipulated that the money go to discoveries or inventions in the physical sciences and to discoveries or improvements in chemistry. He had opened the door to technological awards, but had not left instructions on how to deal with the distinction between science and technology. Since the deciding bodies he had chosen were more concerned with the former, the prizes went to scientists more often than engineers, technicians or other inventors. It was dedicated in 1994 to mark the 90th anniversary of the first Nobel Prize presentation. Melua has provided funds for the establishment of the monument J. The abstract metal sculpture was designed by local artists Sergey Alipov and Pavel Shevchenko, and appears to be an explosion or branches of a tree. The Norwegian Nobel Committee. The privileged 'Nobel Foundation' was an organization, that was used to administer the finances that are related to Nobel Prize based on the will of the scientist Alfred Nobel. This prize is hosted in Sweden and Norway combined with an award ceremony.

Chapter 8 : Great Achievement Awards | Awards | LibraryThing

A medal of Alfred Nobel is pictured prior to the beginning of a press conference to announce the winner of the Nobel Prize in Medicine on October 2, in Stockholm. The only thing more interesting than the colourful history of Nobel Prize laureates is the founding story of the Nobel Prize itself.

Chapter 9 : Top 10 Famous Awards of the World

From the beginning, the Nobel Prize attracted public attention in a way that no other scientific award had. In the early days, it was worth about 20 years of an academic salary, and was the prototypical 'genius award' that allowed scholars to freely pursue their interests.
