The idea that parasites with long-lived infective stages may evolve higher virulence has received considerable attention. This idea is called 'the curse of the pharaoh' because of the hypothesis that the death of Lord Carnavon was caused by very long-lived propagules of a highly virulent infectious disease.

The curse of the pharaohs is an alleged curse believed by some to be cast upon any person who disturbs the mummy of an Ancient Egyptian person, especially a pharaoh. This curse, which does not differentiate between thieves and archaeologists, allegedly can cause bad luck, illness or death. However, the modern origins of Egyptian mummy curse tales, their development primarily in European cultures, the shift from magic to science to explain curses, and their changing uses—“from condemning disturbance of the dead to entertaining horror film audiences”—suggest that Egyptian curses are primarily a cultural, not exclusively scientific, phenomenon. These appear to be directed towards the ka priests to protect the tomb carefully and preserve its ritual purity rather than as a warning for potential robbers. Redford viewed it as "unadulterated clap trap". The tomb of Khentika Ikhekhi 9th–10th dynasty contains an inscription: I shall seize his neck like a bird I shall cast the fear of myself into him". They that shall break the seal of this tomb shall meet death by a disease that no doctor can diagnose. In , Louis Penicher wrote an account in which he recorded how a Polish traveler bought two mummies in Alexandria and embarked on a sea journey with the mummies in the cargo hold. The traveler was alarmed by recurring visions of two specters, and the stormy seas did not abate until the mummies were thrown overboard. His cousin died on that day, his uncle died on its first anniversary, and on the third anniversary his aunt died. Years later, when he excavated the tombs of the builders of the pyramids at Giza, he encountered the curse: May the hippopotamus be against them in water, the scorpion against them on land. However, he later was involved in the removal of two child mummies from Bahariya Oasis to a museum and reported he was haunted by the children in his dreams. The phenomena did not stop until the mummy of the father was re-united with the children in the museum. He came to the conclusion that mummies should not be displayed, though it was a lesser evil than allowing the general public into the tombs. Thereafter, the boy read everything he could find on Ancient Egypt, especially the Hyksos period. Loudon and published anonymously in Austin, — have similar plots, in which a female mummy takes magical revenge upon her male desecrator. Jasmine Day therefore argues that the modern European concept of curses is based upon an analogy between desecration of tombs and rape, interpreting early curse fiction as proto-feminist narratives authored by women. The famous Egyptologist James Henry Breasted worked with Carter soon after the first opening of the tomb. He reported how Carter sent a messenger on an errand to his house. On approaching his home the messenger thought he heard a "faint, almost human cry". Upon reaching the entrance he saw the bird cage occupied by a cobra , the symbol of Egyptian monarchy. He had been bitten by a mosquito , and later slashed the bite accidentally while shaving. It became infected and blood poisoning resulted. Two weeks before Carnarvon died, Marie Corelli wrote an imaginative letter that was published in the New York World magazine, in which she quoted an obscure book that confidently asserted that "dire punishment" would follow any intrusion into a sealed tomb. Morton , "I give him six weeks to live. The report points out that the Earl was only one of many to enter the tomb, on several occasions and that none of the others were affected. Pneumonia was thought to be only one of various complications, arising from the progressively invasive infection, that eventually resulted in multiorgan failure. To him shall come fire, water and pestilence. A study showed that of the 58 people who were present when the tomb and sarcophagus were opened, only eight died within a dozen years. All the others were still alive, including Howard Carter, who died of lymphoma in at the age of Kinnaman who died in , a full 39 years after the event. Howard Carter opened the tomb on 16 February , and died well over a decade later on 2 March ; however, some have still attributed his death to the "curse".

The Passover and the Plague of the Firstborn Exodus A number of commemorations were held, ranging from memorial services for those killed or injured to demonstrations protesting the use of nuclear weapons. Underlying most of these commemorations there was a reaction to the killing of thousands of people who were not personally involved in the military forces of Japan, many of whom were women and children. Not too long before, there was a very strong reaction to the visit of President Reagan to a German cemetery, where some Nazi soldiers were buried. It was felt by many that it was inappropriate for our president to dignify the deaths of those involved in the mass slaughter of Jews, based solely on their race. Here as well, those who died were not military combatants, but civilians, among whom were many women and children. It is with such protests in mind that we must seek to interpret and apply the killing of every firstborn in Egypt, not only of men, but of the animals as well. Our text informs us that this slaughter no need to use a more euphemistic term was directed at the Egyptians alone, and without regard to social or economic status. While every Egyptian home suffered loss cf. The nation Israel did not suffer so much as a dog bark or bite, Exod. The slaughter of the Egyptians took place a long time ago, and thus we do not have the kind of emotional reaction to this account as we have seen to the bombing of Hiroshima or the Nazi death camps of Germany. Nevertheless, we must come to grips with the tremendous moral issues which this account raises. Not only is the slaughter of the Egyptian firstborn the means God used to release His people from slavery, it is the angel of the Lord who smote the firstborn. Not only are innocent children slaughtered by God here, but the occasion is the basis for an annual celebration by Israel, one that is to be carried on forever Exod. While the deaths of innocent Jews and Japanese are protested, in our text God is to be praised, partially on the basis of the slaughter of the Egyptians. In our study of this text we will seek to face these moral issues squarely. I must say at the outset that Christians are obliged to praise and worship God, regardless of whether or not we understand His actions, and that, as God He is free to act in any way He chooses. It is a holy God whom we serve, and this text will remind us of that fact as we come to it with reverence and sincerity. Let us each ask God to prepare our hearts to take the lesson of this incident seriously. The Structure of the Passage In the final verses of chapter 10, Pharaoh angrily demands that Moses and Aaron leave his presence, threatening that to do so again will mean their death v. Moses tells Pharaoh that he is right, that he will never see his face again v. The solution to this apparent discrepancy is to observe the way this text as well as others in Exodus is structured. In chapter 11, verses and are parenthetical explanations. Verses are cited before the announcement of Moses to Pharaoh that the firstborn of Egypt will be slain. This explains how Moses knew that this was the final plague, and why Pharaoh will nonetheless reject the warning. It also informs us that Moses had nothing to say to Pharaoh, but that which God had commanded him to speak. Verses 9 and 10 are also a parenthetical explanation of why Pharaoh stubbornly refused to heed the warning of the plagues. In chapters 12 and 13 there is constant alternation between first the instructions God gave Moses, and these same instructions as Moses conveyed them to the people. There is not a great concern for a smooth flow chronologically as there is for laying, as it were, a historical and theological foundation for the ordinance of the Passover. The purpose of this revelation thus dictates its form. Since the purpose is not merely a chronological review of history, chronological smoothness is set aside in deference to theological explanation. Let us remember that when we come to the Passover celebration and the plague of the firstborn, we are now dealing with the tenth and concluding plague which God has brought upon Pharaoh and the Egyptians. Thus, this plague is the capstone, as it were, of the plagues. It is the final blow of the ten plagues there is yet to be the drowning of the Egyptian army which will compel Pharaoh to release the Israelites. The Plague of the Firstborn and the First Passover The first is the pronouncement to Pharaoh by Moses that this plague is about to come upon all of Egypt. Finally, there is a brief account given of the plague itself, just as God had said through Moses. As I understand the sequence of

events in chapters 10 and 11, Pharaoh had just demanded that Moses leave his presence, and warned that to return would mean death. Verses of chapter 11 inform us of a revelation God had given Moses sometime before, in which the details of the final plague had been outlined. In verses 1-3, Moses declared the essence of this revelation to Pharaoh, as it related to him. No grief will have ever been greater for the Egyptians, and yet not the least evil would fall upon the Israelites. Hot with anger, Moses then left the presence of Pharaoh. Chapter 12 can be divided into four major sections. Since we will not attempt to cover all the material contained in chapter 12 in this message, I want to point out that the structure of the chapter links the instructions given by God to Moses verses 1-3 and the instructions from God spoken by Moses verses 4-10. God would have Israelites and the reader of New Testament times as well know that the institution of the Passover was done in accordance with direct divine revelation. This was not a feast which Israel devised on her own, but one which God designed and very carefully prescribed. The instructions for the celebrations of the first Passover were specific, and dealt with several aspects of the feast. We will briefly review these: A new religious calendar was given to the nation at this time. Since the Passover was the commencement of a new life, the month of Abib, cf. Exodus 12:2. The Passover lamb was to be purchased or selected on the 10th day of the month, and slaughtered at twilight on the evening of the 14th. The Passover animal was to be a male yearling, either a goat or a sheep. There was to be one sacrificial animal per household, unless the family was too small to consume one. Under such circumstances, two families could share one. There was to be provision of enough meat for each person to be adequately supplied. The blood of the animal was to be put on the sides and tops of the door frames where the animal was to be eaten. This blood was to serve as a sign, which would protect the Israelites from the death angel. The Passover meal was largely provided by the Passover sacrifice. The animal was to be roasted whole over the fire, not boiled or eaten raw. The meat was eaten along with bitter herbs and unleavened bread. Surplus food was not to be kept overnight, but was to be burned. This is why the meal was to be eaten with an atmosphere of readiness and anticipation. They were to eat the meal in the same way we would eat in an airport restaurant, knowing that the departure of our flight was about to be announced. In our day, we would have our coats on and our briefcase in hand. In that day, they were to have their cloak tucked in so they could hurry without tripping over it, their sandals on their feet, and their staff in hand. The Passover was a corporate celebration in that all Israel observed the meal, just as Moses had instructed them. On the other hand, the meal was a family matter. Each family was responsible for its own sacrificial animal, its own act of placing the blood on the door frame, and its own celebration of the meal. There is no specific mention of any Egyptians celebrating the first Passover, although this is possible, even likely. This possibility is enhanced by the report that some Egyptians had taken heed of previous warnings 9: Also, in the instructions God gave concerning the future observance of Passover, foreigners who placed themselves under the Abrahamic Covenant as signified by circumcision were allowed to participate, with no distinctions made between them and other Israelites. Those who did not refrain from eating leavened bread were to be banned from the congregation of Israel, whether or not he was a native Israelite cf. Exodus 12:19. There is absolutely no sensationalism here, but only the most cursory account of the fulfillment of the Word of the Lord, spoken through Moses. At midnight, the firstborn of the Egyptians were slain, from the king of Egypt to its cattle, from the firstborn of the Pharaoh to that of the prisoner. The weeping and wailing that night was not like anything ever heard in the land before. There is no need to elaborate further. The Passover and Related Ceremonial Observances The initial Passover meal was the first of endless annual celebrations. The instructions concerning the Passover celebration alternate between the present and the future. What Israel did on that first Passover night was a prototype for all future Passover observances. We shall therefore now consider the future implications of the first Passover celebration, as outlined in our text. The firstborn of all the Egyptians were smitten, while those of the Israelites were spared. We must acknowledge that God had the right as He still does to smite the firstborn of Egypt. Indeed, He had the right to smite the firstborn of Israel as well, and this would have happened apart from the provision of the Passover lamb and the shedding of its blood. God therefore struck down the Egyptian firstborn while He spared the Israelite firstborn. Because the sparing of the Israelite firstborn was not a matter of merit, but of grace, God owned them. Since He had spared their lives, He possessed them. The rite of redeeming the firstborn was a constant reminder to the Israelites of

all subsequent generations that the firstborn belonged to God, and that this was due to the sparing of the firstborn at the Exodus. The first Passover meal was to consist of the roasted sacrificial animal, bitter herbs, and unleavened bread. The hasty departure of the Israelites did not afford the time required to bake leavened bread. The Passover celebration was to commence the Feast of Unleavened Bread. On the first day of the feast, all presence of yeast is to be removed from the house. On this first and last of the seven days, a sacred assembly is held. On these two days, no work was to be done, other than cooking. For the entire seven days, no leavened bread was to be eaten. The entire week of celebration was to serve as a reminder to Israel of the day on which God brought them out of Egypt. The Purposes of Passover Celebrations. There were several purposes for the Passover celebration, some of which were to be understood at a later time. We will briefly survey the principle purposes of the Passover.

Chapter 4 : CinemaSpection: October Horrors #7: The Curse of the Mummy's Tomb ()

Lavishly illustrated with full-color photographs and filled with fascinating facts about ancient Egypt, Curse of the Pharaohs brings to life the very real thrills and dangers associated with the field of archaeology.

Pharaoh is from , when adventure design seems to have been heading away from the sandbox and towards Curse of the Azure Bonds and Dragonlance Adventures. Pharaoh starts badly, the box text becomes too silly even for something like ASE. The key to a good gonzo game is that the silly is deadly seriousness for the characters. In the past I have suggested that a good example is having a character hunted by a giant rooster, a T-Rex sized cock. Visually I think this is pretty funny: Subjectively this would also be terrifying. A page of box text the charges against the PCs provides this dumb story. Perhaps these poor hooks are simply the product of mid-level adventure design. Still, if one is going to have royal forces strong arm a party of hardened murder hobos undoubtedly packing magical artillery a squadron of lancers on fast horses is unlikely to do it. As a module there are elements in Pharaoh that are nice to see after the messier B series. Random encounter tables are also nested and include a few non-monster hazards, such as acid rain. The best of the art is architectural style elevations of special rooms and traps, which are always useful. The maps are also quite nicely produced and have some interesting elements, such as many round or oddly shaped rooms, but suffer from being symmetrical or nearly symmetrical, and filled with a lot of empty rooms. The adventure itself, a trek across a desert with the required sandworm three kinds, two new and the purple worm encounters, some lost caravans, good desert raiders in conflict with band of good pegasi mounted noble types who will be snide and unhelpful. The desert is a hex crawl of sorts with two locations of note that are mapped out. The first of these locations is a city, sunken beneath the sands. While the entrance to the city falling through the ceiling of a buried dome, while reading the plinth of a maudlin statute, is interesting enough, but a very short trip through sand filled ruins to release a nasty efreet is all it leads to. The main adventure location is a pyramid, the empty tomb of a cursed evil pharaoh. The plundering of ancient relics is a good deed, the cure to an ancient curse. The ghost is fine, that he is indestructible rather he comes back every night, or the GM can let a competent cleric blast him and deal with the consequences of having no clues is lame, but worse, how he is presented is silly. Encounters with doomed spirits that want to talk are great, they are a lesson to party members not to attack everything, and if handled right offer clues and hints - not the pitch for one of the Scorpion King movies. The ghost here is an excuse for bad genre fiction. This is concept art from The Mummy III, it is more evocative of an ancient desert tomb, and presents more interesting perils than the entirety of I4. It is set in a Indian style temple filled with crocodiles. The pyramid tombs themselves have some good ideas in them, the false tomb is especially nice and that the place is crawling with lost adventurers is amusing, but the reliance on magical trickery, teleportation and lengthy areas where nothing happens and nothing is to be found are a problem. Treasure is a worse problem though. Monetary treasure is likewise dull piles of GP. This is a desert tomb of an ancient pharaoh, one of the few locations actually based on a historical treasure trove. Yet every monster in Pharaoh is a coin collector: The tomb is largely a maze of magic, confusing, light dampening mist, designed to be wandered and unmappable. The cues to survival and finding a way on are found in sounds and smells. Of course a party with plenty of rope adventurers with rope "what never! Plus the cues the scent of rotting, falling water are boring. This whole adventure is boring in fact. Some encounters, like a pack of sneaky doppelgangers, are decent enough, but compared with the sort of thing the day job working non-professional I play with online cobble together weekly this is a fundamentally dull adventure. Other encounters are terrible. After traveling onward endlessly through tunnels of boring encounters and finally reach an area where undead priests lurk. Indeed this whole are, with small gangs of weak undead, seems like it would be a mere annoyance to a party with a level cleric. In looking over the whole thing, before I forever delete it, I think the worst part was the treasure. Pharaoh mummies need to be clad in bandages that when unraveled act as a scroll of insect plague, they need to have coffins studded with rubies carved into eyes, and a floor of gold tiles engraved with dread symbols of withering. Well the maps might be salvageable. This was the Mummy Lich we wanted. Posted by Gus L at.

Shadows of Anubis Nefertiti Nefretiti is the first boss. You have to kill her at the end of The Lady of Grace main quest. Place the artifact into her throne to summon this boss. That artefact is obtained during the mission that takes place in Aaru. Nefretiti uses two blades. She runs towards Bayek and jumps on him when you try to move away from her. The best way to defeat her is to use melee weapons. Use special attacks to deal great damage. Akhenaten Bossem konczacym misje Odstepca jest Akhenaten. Tutankhamun Tutankhamun is the boss that appears at the end of The Curse of the Pharaohs main quest. He guards Duat and is the hardest enemy and his level is Just like Akhenaten, Tutankhamun attacks by swinging his weapon and using spin attacks which means that you have to stay away from this boss. Fire bombs are useful against him. Remember to throw a new one at him when the previous bombs lose its effect. The best weapon against Tutankhamun is a bow. Keep your distance and aim at his head with your best weapon of that type. Remember that the arena is inside of a building. Also, campfires burn near the walls - you can easily get hurt by them. Ramesses The final boss of the King of Kings mission is Rameses. He guards Heb Sed. In order to summon him, you must complete a number of main quests. Rameses, similarly to other pharaohs, attacks by flailing his weapon around his own axis. However, he can also charge at the character. It is highly advised to attack him at that moment with an adrenaline attack, as it will stop his charge. When he is not attacked, he summons sandstorms. You should also note that the battle takes place in an enclosed area - the sings of the wall will appear only when you approach the boarder. They both have level 55 and will drop a legendary weapon once killed. Those bosses can appear in any place on the map. The encounter should be initiated by attacking them with a hidden blade. This will take a considerable part of their health bars. Shadows of Anubis can summon soldiers.

Much of the distinguished evolutionary theory has, however, focused on each of transmission component separately. Herein, we use the framework of adaptive dynamics to study the evolutionary consequences of mixed transmission. We find that environmental transmission can select for increased virulence when direct transmission is low. Increasing the efficiency of direct transmission gives rise to an evolutionary bi-stability, with coexistence of different levels of virulence. We conclude that the overlooked contribution of environmental transmission may explain the curious appearance of high virulence in pathogens that are typically only moderately pathogenic, as observed for avian influenza viruses and cholera. Chapter 7 : Dungeon of Signs: REVIEW OF I3 - PHARAOH

The curse of the pharaohs refers to an alleged curse believed by some to be cast upon any person who disturbs the mummy of an Ancient Egyptian person, especially a pharaoh. This curse, which does not differentiate between thieves and archaeologists, allegedly can cause bad luck, illness or death.

This Best Practices Commentary, like all of the Sedona publications, was written by a committee of expert members of The Sedona Conference, who agreed upon the content and wording. The Search Commentary is carefully considered and well written. For instance, the Search Team acknowledges that most people consider: So much for the gold standard. They contend that a new consensus is forming in the legal community: There is growing consensus that the application of linguistic and mathematic-based content analysis, embodied in new forms of search and retrieval technologies, tools, techniques and process in support of the review function can effectively reduce litigation cost, time, and error rates. This leads to the Practice Point 1 of 8: In many settings involving electronically stored information, reliance solely on manual search process for the purpose of finding responsive documents may be infeasible or unwarranted. In such cases, the use of automated search methods should be viewed as reasonable, valuable, and even necessary. The automated search method of choice today is the almost-as-venerated process of keyword search review. It involves the use of select keywords that you think the documents you are looking for will contain. The manual review then frequently leads to adjustments in the query terms and repeat of the keyword search. In my experience, most attorneys think they have a similar, if not better, success rate. It was a tremendous innovation in its day. Dabney, *The Curse of Thamus*: Since the mere possession of writings does not give knowledge, how are we to extract from this almost incomprehensibly large collection of written records the knowledge that we need? The Sedona Search Team agrees: This is because simple keyword searches end up being both over- and under-inclusive in light of the inherent malleability and ambiguity of spoken and written English as well as all other languages. On the other hand, keyword searches have the potential to miss documents that contain a word that has the same meaning as the term used in the query, but is not specified. Finally, using keywords alone results in a return set of potentially responsive documents that are not weighted and ranked based upon their potential importance or relevance. In other words, each document is considered to have an equal probability of being responsive upon further manual review. This is also what I am seeing. Here is how they summarize the herald of coming good: Alternative search tools are available to supplement simple keyword searching and Boolean search techniques. These include using fuzzy logic to capture variations on words; using conceptual searching, which makes use of taxonomies and ontologies assembled by linguists; and using other machine learning and text mining tools that employ mathematical probabilities. This requires a new kind of team synergy that I often talk about in this blog, a combination of Science, Technology and the Law. The Sedona search group concludes with a similar recommendation: The legal community should support collaborative research with the scientific and academic sectors aimed at establishing the efficacy of a range of automated search and information retrieval methods. There is strong demand for new, improved search technologies, and this is becoming big business. Billions of dollars are now pouring into search technology research. Curse of the Pharaoh topic Dark Shadows: Curse of the Pharaoh is a Big Finish Productions original dramatic reading based on the long-running American horror soap opera series Dark Shadows.

Now, therefore, please let your servants live in the land of Goshen. It is alluded to in Acts 7: This land was known as being a fertile pasture land. It is also called "the best of the land," vv. The rabbis say that he took the weakest and ugliest so that Pharaoh would not draft his brothers into military service, but this seems dubious. The Anchor Bible Commentary asserts the exact opposite, "he took the outstanding ones" p. There is a real possibility that the number "five" had special significance to the Egyptians because it is used so often in these chapters cf. Sons were expected to follow in the avocation of their father. Shepherds of cattle were looked down upon with some contempt in Egypt cf. This implies that 1 through the racial arrogance of the Egyptians and 2 the cultural aversion to shepherds, the children of Jacob would be left pretty much alone. This was very significant because it is obvious from Genesis 38 that they were becoming amalgamated into the Canaanite culture. Therefore, the sojourn in Egypt was really a chance for them to collect themselves as a distinct national religious entity. Pharaoh should be addressing the five brothers, not Joseph. This may have been just another way of showing his care for them because of Joseph. Or, it may have been his desiring the physical prosperity that was connected with the God of these people cf. Some say it is simply the normal Oriental opening and departing greetings cf. However, it seems unusual that it is mentioned twice here. The superior always blesses the inferior cf. Martin Luther says that Jacob preached the gospel to Pharaoh and that he and his court were converted. Because of the divine blessing on the family of Abraham and those connected to them, this blessing to such a supportive Pharaoh seems appropriate cf. The Jewish Study Bible, p. The mentioning of Rameses is either 1 a later addition by a scribe or 2 there was a city there by this name before the Hebrews rebuilt one there in honor of Rameses II. Rameses II seems to be the Pharaoh of the Exodus experience and seems to confirm the date as being b. This is not only true because of the location of the Egyptian capital during the Hyksos period being relatively close to the land of Goshen, but also for the archaeological evidence of the invasion of Palestine around b. The rabbis say that children waste a lot of bread and this is an idiom to show that Joseph provided abundantly for them. It is possible that the term "little ones" is an intimate family metaphor for all the members of the covenant family cf. For our money is gone. There is nothing left for my lord except our bodies and our lands. Buy us and our land for food, and we and our land will be slaves to Pharaoh. So give us seed, that we may live and not die, and that the land may not be desolate. However, Joseph acted on the common theological assertion that Pharaoh, as the representative of the sun god Re, owned the land of Egypt, and brought it into reality. Its basic meaning is "to faint. It is affected by the curse of Gen. This control of the weather is also reflected in the "cursing and blessing" section of Deuteronomy cf. The famine was severe cf. Now, their livestock was in jeopardy. Really, the taking of the livestock, which they could not feed and which were going to die anyway, is an aspect of governmental mercy, not exploitation. Therefore, they did not sell their land. Actually, they became serfs cf. We know, not only from the Code of Hammurabi, but also from the archaeological discoveries at Ugarit and the Nuzi Tablets, that serfdom was a common, cultural plight of the people of the ANE. Verses show how he personally benefitted Pharaoh in his bureaucratic control of Egypt. This entire experience has been "somewhat" documented from Egyptian historical records. This translation is followed by the Revised Standard Version and seems to fit the context of both vv. Rashi says that he made them move to the city in order to prove to them that they did not own their own land. The Peshitta and Targum Onkelos have "he removed them from town to town," which is exactly opposite from the MT. From Mesopotamian and other historical documents we know that from forty to sixty percent was not uncommon. Joseph was treating these people with great fairness. They knew that, as v. It is interesting that Jacob thought he was going to die long before he actually did, just as his father, Isaac, had in Gen. This shows that although these were great men of God, they still had physical problems associated with old age as well as psychological doubts. To know God does not exempt one from the problems of aging. Please do not bury me in Egypt, 30but when I lie down with my fathers, you shall carry me out of Egypt and

bury me in their burial place. Then Israel bowed in worship at the head of the bed. There is no "grim reaper," only an angel of God. Death is not an enemy, but a reunion for those who have a relationship with YHWH. In the Bible it is not death that is a tragedy, but an early death or a violent death. After the fall of Genesis 3 cf. Genesis 5 death is the natural end of physical life. When one is aged, death is a blessing! There are two possible orientations to this gesture: The point of this maneuver seems to be an emphasis on the descendants of Jacob as a true object of oath taking. Apparently this was caught up in the covenant promises of God for seed, going back to Canaan, cf.

Prologue Annotations [1] "Long ago, when the pyramids were still young," A deep voice speaks, and a stone eye opens, revealing a small, golden box on a pedestal. It blasts, then darts to the side, attempting to flank Yugi, who stands opposite him on Curse of Dragon. He was always up for a challenge. Then he goes to draw. His innocent, round face is set with determination. He solved the Puzzle," The golden box is full of irregularly-shaped puzzle pieces just as gold and glittery. Yugi is enchanted with the challenge of fitting them together. Finally, only the last piece remains-- the center one, with the upraised symbol of the eye. From a grey void appears swirling lines, strange symbols, rushing wind, and a column of blue-white light, in which there appears a figure. This presence radiates power, confidence, and strength. Yami switches in, resolute. Pegasus and the chair recede into the distance, and duel cards, all facedown, scroll across the screen, an impregnable wall between Pegasus and any attempt to challenge him. At their center stands a teardrop-shaped monument, crowning the Daedalus Bridge. The Crimson Dragon dives upward into the swirling cloud, spreading its wings over the Kaibadome, shining brighter and brighter like a beacon.
