

Chapter 1 : Basic College Mathematics

Basic College Mathematics Plus NEW MyLab Math with Pearson eText - Access Card Package (12th Edition) (Bittinger Developmental Mathematics Worktext Series) Marvin L. Bittinger out of 5 stars

This latest edition continues the Bittinger tradition of objective-based, guided learning, while also integrating timely updates to the proven pedagogy. This edition has a greater emphasis on guided learning and helping students get the most out of all of the resources available, including new mobile learning resources, whether in a traditional lecture, hybrid, lab-based, or online course. You are purchasing a standalone product; MyMathLab does not come packaged with this content. MyMathLab is not a self-paced technology and should only be purchased when required by an instructor. It would have been easier to have her buy the book new in the school bookstore and avoided thye stress of buying the separate access card. Excellent condition, no lab By Jessica on Oct 03, The book itself was in beautiful condition and exactly what I needed. We still ended up saving money though so, all in all, it was awesome. I thought when I rented this the access code was The only reason I rented it was because I thought the code was with it. And loved the fact that I did not have to purchase it rentals are the best when you are doing refresher courses over the summer. Great for a refresher. Definitely worth to buy. Loved how each step is explained in the book. By Amazon Customer on May 23, Was perfect for my math class. Luckily the notes made where not on the problems I ended up doing. I hated math, but this book seemed to ease the difficulties of disliked instructors and actual applications regarding math. Bittinger , Judith A. Beecher , Barbara L. This particular edition is in a Paperback format. It was published by Pearson and has a total of pages in the book. To buy this book at the lowest price, [Click Here](#).

Chapter 2 : ISBN - Basic College Mathematics 12th Edition Direct Textbook

The Bittinger Worktext Series recognizes that math hasn't changed, but students-and the way they learn www.nxgvision.com latest edition continues the Bittinger tradition of objective-based, guided learning, while also integrating timely updates to the proven pedagogy.

The Editorial team at Pearson has worked closely with educators around the world to include content which is especially relevant to students outside the United States. The guide will help students identify the resources in the textbook, supplements, and MyMathLab that support their learning style. Learn the Skills and Concepts—Students have several options for learning and practicing the math concepts. In the Learning Path for Ready to Go MyMathLab courses, each chapter begins with a brief assignment on the prerequisite skills needed for the chapter, giving students the chance to refresh and practice. The textbook or eText is a great starting point for students to learn the material. The Guided Solution exercises are select margin exercises within the text that allow students to fill-in the blanks to learn how to work through the problem. These problem types are also assignable in MyMathLab, where the exercises are broken down into smaller steps for students to fill-in as they work through the problem. Notes, Practice, and Video Path workbook are also the perfect resources for helping students learn the material. Check Your Understanding—Students have frequent opportunities to check their work and confirm that they understand skills and concepts before moving on: Reading Checks at the beginning of each set of section exercises in the text ask students to demonstrate that they understand the material. Active Learning Figures are also a great resource to help students understand the concepts. Review and Test Your Understanding—Students have a variety of resources to check their skills and understanding along the way and to help them prepare for tests. Chapter Test Prep Videos are also available to show worked-out solutions to all the end-of-chapter tests. Reinforce Study Skills—Developing solid time-management, note-taking, test-taking, and other study skills is key to student success in math courses as well as professionally and personally. Instructors can direct students to related study skills resources as needed. This pull-out card at the front of the text is perforated, three-hole-punched, and binder-ready for convenient reference. It includes Your Guide to Success in Math course checklist, Student Organizer, and At a Glance a list of key information and expressions for quick reference as students work exercises and review for tests. Checklists of study skills—designed to ensure that students develop the skills they need to succeed in math, school, and life—are integrated throughout the text at the beginning of selected sections. This package includes MyMathLab, an online homework, tutorial, and assessment program designed to work with this text to personalize learning and improve results. With a wide range of interactive, engaging, and assignable activities, students are encouraged to actively learn and retain tough course concepts. Two MyMathLab course options are now available: Standard MyMathLab courses allow instructors to build their courses their way, offering maximum flexibility and control over all aspects of assignment creation. Ready to Go courses provide students with all the same great MyMathLab features, but also make it easier for instructors to get started with pre-built AND pre-assigned assignments. The Ready to Go courses also feature a new four-step Learning Path: 1. Learn the Skills and Concepts, 2. Check Your Understanding, 3. Do Your Homework, 4. Review and Test Your Understanding. Increased coverage of skill-building, conceptual, and applications exercises, as well as new assignable Guided-Solution exercises, Skill Checks, and Reading Checks. Active Learning Figures, available for key concepts, foster conceptual understanding and are especially helpful for visual and tactile learners. Instructors can create media assignments with the figures. To-the-Point Objective Videos include new Interactive Your Turn Exercises, where students solve exercises and receive instant feedback on their work. The videos also can be used hand-in-hand with the new MyMathGuide workbook. Notes, Practice, and Video Path is an objective-based workbook available in print and in MyMathLab that provides guided, hands-on learning. It offers vocabulary, skill, and concept review —along with problem-solving practice, where students can fill-in the steps to guided solution problems. It can be used together with the To-the-Point Objective Video program—and students can fill-in steps as they watch the videos, listen to the instructor lecture, or read the textbook. It is a loose-leaf workbook with space to

show work, write notes, and can serve as a good foundation for a hybrid or self-paced course notebook or lecture notes. This latest course release is compatible with the JAWS screen reader enabling print-disabled students to access and interact with numerous problems as noted by an icon within the assignment manager. The course also works with the ZoomText enlarger, and includes an HTML eBook that is compatible with JAWS and other Windows screen readers, allowing all students to access the same text, at the same place, and at the same price. Additionally, all videos include closed captioning. This new, interactive module is available in the left-hand navigation of MyMathLab and includes videos, activities, and post-tests for these three student success areas: Instructors can integrate these assignments with their traditional MyMathLab homework assignments to incorporate student success topics into their course as they deem appropriate.

Chapter 3 : ISBN - Basic College Mathematics 12th Edition Direct Textbook
