Jeremy Schmidt interview re: An unexpected development for those of us used to thinking of Sinoia Caves as a side-project! Thanks to Femke van Delft for having taken some very cool photos, previously unseen, of Jeremy over the years, unveiled, as far as I know, for the first time here I have tons of questions about the process of scoring the film! How did Panos contact you? Did you see the film with a temp soundtrack, before scoring it? What did they use? Were there suggestions from Panos as to the sounds he wanted? Did you provide him cues, which he then fit to the film, or - I suspect the latter - did you work closely, looking at images, and fitting music to them? How hard a taskmaster was Panos? If you could walk me through your early involvement with the project I came on board after most of the filming was done and they were on to the editing phase. I think we established a rapport early on, based on a mutual appreciation for some of the key touchstones and reference points within the film. This was kind of indicative of our ensuing collaboration. What gear did you use? How closely did you work together? Were other people involved Panos? Do you have your own favourite film soundtracks that inspired or guided you, either in scoring this film, or in thinking about how sound and images interact? Risky Business seems to be an ever-regenerative source of influence for me also! And of course I absolutely love John Carpenter. Also some Sunn 0 and Popul Vuh whom I also love Are these manipulated samples or entirely synthesized? I assume no actual singers were used All those "voice" parts were done using a Mellotron. I like how mechanical, yet fluid the characteristics of the Mellotron can be - definitely one of my favourite musical instruments of all time. Any "tricks" that might not be immediately apparent to the naked ear, or that might only be noticeable for instance to someone in an altered state of consciousness? Yeah, I noticed that at home but not at the theatre! Psychedelia in one form or another seems to have always been at the center of my musical orbit, so to speak.. I would love to OWN a recording of the soundtrack for this film; are there plans to release one? I do listen to Venom now and then, but It may have a nasty bite to it, but no venom.. A few final questions. What about those caves made you want to name your project after them? Is Sinoia Caves officially just you? The soundtrack is credited to Sinoia Caves, but could equally be credited to Jeremy Schmidt, right? Any reason you chose to give credit to your project name, instead of your own name? It is just me. I figured the music I was making for the film was synonymous with what I usually record as Sinoia Caves, so I just named it as such..

**Chapter 2 : Beyond the Black Stump Mountain Bike Trail - Canberra**

*Beyond the Black Mountain Â· Michel Whalen The Sea of Tranquility â€” Spout Multimedia (a division of Michael Whalen Music) Released on: Auto-generated by YouTube.*

At Swannanoa Gap, just south of the range, archaeologists have uncovered evidence of habitation dating to the Archaic period BC , the Woodland period BC - AD , and the Mississippian period c. The Mississippian-period village of Joara was located near the town of Morganton to the southeast. Both expeditions spent considerable time at Joara. By , however, the Cherokee had signed away ownership of the Black Mountains to the United States, and Euro-American settlers moved into the Cane and South Toe valleys shortly thereafter. The early settlers farmed the river valleys and sold animal furs, ginseng , tobacco, liquor, and excess crops at markets in nearby Asheville. The early farmers also brought large herds of cattle and hogs, which thrived in the valleys and mountain areas. In , the state dispatched North Carolina professor Elisha Mitchell â€” into the western part of the state to measure the elevation of Grandfather, the Roan Highlands , and the Black Mountains. Using a crude barometer , Mitchell gained measurements for Grandfather and Roan with apparent ease, although he struggled to discern which of the Blacks was the highest. Two local guides one of whom was William Wilson, a cousin of the later renowned mountain guide, Thomas "Big Tom" Wilson led Mitchell up a bear trail to what they believed to be the highest summit. Although exactly which mountain they summited has long been disputed, it was likely Mount Gibbes, Clingmans Peak, or Mount Mitchell. Several surveyors visited the Blacks in subsequent years, including Nehemiah Blackstock â€” in , Arnold Guyot â€” in , and Robert Gibbes in the early s. Clingman reported his findings to Joseph Henry, the head of the Smithsonian Institution. The two bickered back and forth in the local newspapers throughout , each claiming to have been the first to summit and measure the higher Black Dome. The debate was intensified by the political climate of the s, as Mitchell was a Whig supporter and Clingman had recently left the Whig party to join the pro-secession Democrats. Finally, in , Mitchell returned to the Blacks in an attempt to gain still more accurate measurements. One evening, while attempting to reach the Cane River Valley, he slipped and fell into a gorge along Sugar Camp Fork, near the waterfall that now bears his name. His body was found 11 days later by the legendary mountain guide Thomas "Big Tom" Wilson â€” Zebulon Vance led a movement to verify Mitchell as the first to summit the highest mountain in the Eastern United States, and to have the mountain named for him. Vance convinced several mountain guides to change previous statements and claim the route they had taken actually led to Black Dome, rather than Mount Gibbes. Clingman continued to deny that Mitchell had measured Black Dome first, but was unable to overcome the shift in public sentiment. By the s, a lodge had been established in the southern part of the range, and locals such as Jesse Stepp and Tom Wilson had built several rustic cabins on the higher mountain slopes and were thriving as mountain guides. The American Civil War â€” brought a temporary halt to the tourism boom, but by the late s, the industry had recovered. In the s, brothers K. Between and , northern lumber firms, namely Dickey and Campbell later Perley and Crockett , Brown Brothers, Carolina Spruce, and Champion Fibre, bought up timber rights to most of the Black Mountains and began a series of massive logging operations in the area. In , Dickey and Campbell managed to construct a narrow-gauge railroad line connecting the Swannanoa Valley with Clingmans Peak. Other narrow-gauge lines quickly followed. Between and , much of the forest on the upper slopes and crest was cut down. An increase in demand for red spruce during World War I led to the rapid deforestation of much of the spruce-fir forest in the higher elevations. As forests were removed, forest fires caused by the ignition of dried brush and slash left by loggers and erosion denuded what was left of the landscape. After the North Carolina state legislature rejected an initial attempt to create a state park at the summit of Mount Mitchell in , Craig began negotiating with and may have threatened Perley and Crockett to preserve the forest atop Mitchell while he and Holmes lobbied for the creation of a state park. The state legislature finally approved the purchase of a stretch of land between Stepps Gap and the summit of what is now Big Tom in , which became the core of Mount Mitchell State Park. The Pisgah National Forest, established in , also began buying up and replanting lands that had been logged over. The Black Mountains, like many other ranges in the Appalachians, are

currently threatened by acid rain and air pollution. A more significant threat to the firs, however, is the balsam woolly adelgid, an insect which may have an easier time killing the firs than it normally would due to them being weakened by the acid rain. These too are under attack by an introduced pest, the hemlock woolly adelgid. Arriving only in the last few growing seasons, the health of the hemlocks in the region is rapidly declining. Research is currently underway in releasing predator beetles that will, hopefully, eat enough adelgids to balance their population and allow the hemlocks to flourish. The area around the Black Mountains is also experiencing rapid population growth as retirees from other states pour into the region. Due to a lack of zoning laws, this has resulted in rapid development of ridgetop cabins, large second-homes on the lower ridges, and deforestation that threatens the natural beauty of the region. And although many people visit the Black Mountains for their legendary scenic views, visibility has been greatly reduced due to particulate matter in the air, mainly coming from large TVA coal-fired powerplants "upstream" of the Black Mountains in the Midwest.
