Chapter 1 : Explode The Code: Books | eBay

I know that Explode the code has been a round for a while. But to me this is new as my oldest is in Kindergarten now. I was unsure which book would be appropriate for him and I guessed that 3 would be the right one for him.

You can do it, too. Have a great time. Starting at the very beginning, Mrs. Hopkins has boiled the entire process down into eight steps. The package contains the Happy Phonics Guidebook, "My Big Book" an almost-to-the-end-of-the-program-reader and lots of printed, brightly colored paper and cardstock â€" flashcards, game components, first little readers and spelling lists. The Guidebook contains the Eight Steps along with specific how-to instructions for each step. The essence of the program is to introduce the phonics concepts a few at a time and then play games for retention. The author suggests that lesson time be about 10 minutes a day, but you may want to factor in more time to play the games over and over just because the student wants to. The Guidebook is extremely user-friendly and written in first-person, mom-to-mom form. The step-by-step instructions are straight-forward and easy to follow. All references to the games and other supplementary material are coded with little symbols found on the colored sheets. And, of course, the teaching aids are clearly marked for each unit. The teaching progression is common sense. Alphabet song; capital letters match lowercase letters; the main sound for each letter; blend letter sounds to form a word; teach common non-phonetic sight words; teach vowels that can make a second sound; teach through the phonic units; READ. In fact, she changed her original letter presentation order used with her older children to conform to the Explode the Code books for her younger children and in this program. She also suggests various supplementary readers. The games and other reinforcement activities are obviously a central component of this program. Some preparation is involved, usually just cutting cards apart. The games include some adapted favorites like Phonics Bingo and a number of creative originals like the Y Not? The line art of the game components is not high tech graphics but still communicates the concept and looks inviting. This program fits into the "complete program" category of phonics instruction, as it includes systematic phonics, reinforcement, and reading practice. The program gets your student reading on his own in an enjoyable way. But it is an enjoyable program that will build the confidence of a newbie and provide ease of instruction for busy homeschooling mothers. All for a very reasonable price!

Chapter 2 : Explode The Code 3

But for a young child, it can seem nearly impossible to crack the system of syllables and syntax that is language. The authors of the Explode the Code series of phonics instruction books approach the teaching of reading and writing practically, providing students with the skills they need to read and understand words. The process of decoding is the process of learning to recognize letter-sound relationships and letter patterns so that the learner can begin to read any word they encounter by putting the sounds together. Explode the Code uses a highly visual decoding system to aid such recognition. Overall, this is an engaging program for kids just learning to read or those in need of remedial-level work, and one of our most recommended phonics curricula. How Do These Work? Explode the Code is a series of consumable worktexts. Students should complete levels per year. The first three Books A-C provide a foundation of consonant sounds, reinforcing sound-recognition with learning to write each letter in manuscript form and with exercises that emphasize critical thinking. These are generally appropriate for preschoolers, though you can start them later. Book 1 provides consonant review and moves on to short vowel sounds. From there, the series takes students through the different phonics sounds and blends, including suffixes and prefixes in the later books. Besides the first three "primer" books, there are eight levels of Explode the Code. Each text follows the same basic format, with similar exercises that continue to increase in difficulty, as well as periodic cumulative review. The teachers guides one for levels 1 and 2, another for levels 3 and 4, etc. Lessons are typically about 8 pages longâ€"some kids have no problem completing one lesson a day or more , while others need to pace themselves a bit slower. While the teacher guides might not seem like much at first glance, there is a lot of information in each one. The student texts themselves are fairly self-explanatory, so the teacher guides may not be necessary, especially if the instructor is confident teaching phonics. The four Beyond the Code books to be used after every second Explode the Code text follow the same phonetic structure as the Explode the Code series, but focus on reading comprehension. While there are elements of reading comprehension within the Explode the Code series, it is more thorough in Beyond the Code. This is a very light-hearted curriculum. But it is also very effectiveâ€"though the authors would prefer students smile through lessons rather than grimace, they also want to ensure that they learn how to read well. Those who have used the program say their kids have excellent spelling skills as a result, and many testify that their students actually want to do more lessons than they have to. This is good news for those who want their kids to enjoy learning, and not just to memorize the necessary facts. This is not an elaborate system. While some might feel their kids need those extra trappings, a minimalist approach seems more straightforward, and the uniform structure of each book should make for ease of use that will keep kids from frustration. After the last book in this series, your child will know how to read, so the possibilities from here are nearly limitless. One of the best choices would simply be to have them start reading great literature and helping them learn to analyze it. Get Ready for the Code covers letters b, f, k, m, r, and t. Get Set for the Code covers letters d, h, j, n, p, and s. Go for the Code covers letters c, g, l, q, v, w, x, y, and z. Book 1 includes consonant review and covers short vowels. Book 2 covers initial and final consonant blends. Book 5 covers word families all-alk, old-olt-oll, ild-ind; qu words; three-letter blends thr, shr, scr, str, spr, spl; diphthong -ey; and three sounds of -ed. Book 6 covers vowel plus r words; ar, or, er, ir, ur, wor, war; diphthongs oo, ea, ie, oi-oy, ou-ow, au-aw, igh, and ew-ui-ue-ou. Book 8 covers suffixes and endings.
