Types of Mantel There are four different types of electric fireplace mantels, namely standard wall mantel, corner mantel, rolling mantel, and media console mantel. Standard Wall Mantel - The standard mantels for electric fireplaces are what most people look for as they fit most of their needs. A standard unit is designed to be placed flat against a wall so the entire fireplace and mantel package looks as if it is a traditional fireplace. Corner Mantel - A corner mantel is for people with limited floor space. It is paired with, as you might have guessed, corner electric fireplaces, which maximize floor plans. A corner mantel with corner electric fireplace is perfect in bedrooms and small family rooms. There are models with added versatility as they can convert from a corner unit to a standard wall mantel as needed. Rolling Mantel - You may need a portable mantel that can be easily moved from one room to another. If so, then your best option is a rolling mantel which is useful in apartments, condos, lofts, and trailers. Media Console Mantel - This is a combination of two furniture pieces to create the best addition to rooms. They serve several purposes apart from creating a warm, inviting setting. They offer ample media storage and clever cable management! A wooden fire surround comes in various finishes and colors. The most common types of wood used in making electric fireplace surrounds are oak, pine, and dark mahogany. Other common materials used in making surrounds are limestone and marble. Limestone is a stunning stone with a honed finish. Marble, on the other hand, has a darker vein compared to limestone but it also has a matte finish. Its frame is horizontally grooved at the top and at the bottom. This fireplace especially matches walls of stones in greys. It look like real and it makes your interior more cozy without mess. It features durable and practical cabinets. The central part includes a fireplace with a classic construction that plays decorative role in any design. Crafted of birch plywood, the casing features a beautiful design, with a rectangle base, and a large enough top to place some decorations on it.

Depending on height, it has two to five shelves inside a frame of five pieces of wood--two sides, a top, a back, and a bottom. However, building a book shelf around a fireplace requires more than slapping five pieces of wood into a serviceable frame and placing the shelves. A book shelf surrounding a fireplace. Freestanding There are two options when building a book shelf around a fireplace: While a freestanding book shelf can be taken with you when you move, a built-in stays in the wall when you leave. The decision between building a freestanding or a built-in book shelf comes down to personal choice. In one version of the freestanding design, WoodDance Studio built a mantle for the fireplace to connect the two book shelves on either side. Two additional options are solid woods such as pine, poplar or oak, or medium-density fiberboard MDF. Each has its benefits and pitfalls, with strength and cost the major differences--solid wood is strongest, followed by plywood and MDF. Solid wood also costs more than the other options. The screws or nails, besides holding the book shelf together, will also serve as clamps while the wood glue dries. Construction Measure the space around your fireplace and on either side. Cut your wood to the measurements you want for the top, bottom, sides, back, and shelves. For a built-in book shelf, find the studs to which you plan to attach the book shelf. Mark where you want the bottom of the book shelf to be. If you want space underneath the book shelf, be sure to include it in the measurement. Cut the top and bottom to size. Glue the top and bottom to the sides before nailing or screwing them together. Mark the spacing for each of the interior shelves, ensuring you leave enough room for the tallest book you intend to shelve in the unit. Glue the interior shelves into position, and then nail or screw them into place. Spread wood putty over the nail or screw holes so the fasteners are covered, then sand smooth. Nail the metal runners to the sides of the book shelf. Place metal spring clips into the slots of the metal runners where you want your shelves to rest. Nail or screw the back of the unit onto the main body. This is the last step for a freestanding book shelf before you move it into place. Repeat the previous steps for the second book shelf. Place both book shelves on either side of the fireplace. If your plan calls for a mantelpiece, attach it to both sides using screws or nails. Connect the tops of the book shelves with whatever type of header you want. It could be another series of shelves or a simple arch. For a built-in book shelf, bolt or screw it into the wall through the back of the book shelf before attaching the mantelpiece and the header between the tops of the book shelves. To finish the unit, either stain or paint it with the color of your choice. Stain offers a chance to enhance the color and grain of the natural wood, while paint may match or complement the walls of the room.
