

Chapter 1 : Dr. Kent Hovind's Creation Seminar 2: The Garden of Eden, part b

This is part 2 of Kent Hovind's creation seminar. The title of this one is, "The Garden of Eden". To buy this or the whole seminar on DVD, go to.

We are going to continue now talking about the garden of Eden and what it was like. The Bible says in Genesis 1: Things are falling apart. We now have an incredible genetic load. We are mentally and physically deficient compared to Adam and Eve. Things are not getting better, but we all teach the kids in the textbooks: Is it possible for an ape-like creature to turn to a human? Well it depends what you mean by caveman, ok. There are people today who live in caves, ok. Was your ancestor an ape-like creature? Nebraska man Nebraska man was used for years as evidence for evolution. All they found for Nebraska man was one tooth. That is the entire Nebraska man Then they built an entire man from that one tooth, and later made him a wife. Now you have to really be good to know what his wife looks like from his tooth. Later they found out the tooth actually came from a pig. Piltdown man How about Piltdown man, named after the gravel pit it was found in, in Piltdown, England. In they discovered the Piltdown man. It was in the New York Times: It was gonna be used in at the Scopes monkey trial as part of the evidence for evolution , but the judge said: The teacher was John T. Scopes down here in Dayton, Tennessee. But, Piltdown man was a hoax. Filed the teeth down! For 40 years it was in the textbooks as proof for evolution. It was a fraud; exposed as a fraud, Neanderthal man is still in your textbooks used in your town here in Knoxville, Tennessee! Neanderthal man Long story about the Neander Valley, named after Joachim Neander that wrote the song in the songbook: Back in , they found a skeleton petrified. A man petrified in this valley; called the Neander Valley; and they named it Neanderthal man. The back was bent over. About Neanderthals have been found. Their brains are bigger than ours. Their bone structure was incredibly strong. They said they had so many muscles, that the average Neanderthal could probably pick up the average NFL linebacker and fling him over the goal post. Phenomenal strength in the Neanderthals! They gave the same skull to 9 different artists and said: Would you like him ape-like or human-like? You tell us what you want. He came and spoke at our conference a few weeks ago at the boot camp we had in Pensacola. He studied the actual Neanderthal skulls in Europe. So if you could live to be 3 or 4 hundred years old, your eyebrow ridge would stick way out! It pulls on the bone. The Neanderthals are perfectly normal humans that are living to be 2 or 3 hundred years old. See the eyebrow ridge sticking out. There are a lot of different shapes of heads. You could line up the folks in Knoxville, Tennessee and prove evolution, just by the shape of the skull. Why on earth is that considered a missing link? It was proven wrong in Thirty years ago proven wrong! Why are they keeping that in the textbooks as evidence for evolution? How many of you have every heard of Lucy before? Donald Johanson found Lucy, , Ethiopia. He had gone there with a grant to look for missing links. Somebody gave him some money, said: Lucy was three feet tall; it was obviously a chimpanzee of some kind. Now the bones of the skull were crushed thoroughly. Very popular back then. Which by the way has initials LSD, which they must have been on when they found this thing. But the knee joint is the best evidence they have that Lucy was becoming a human. Because an ape has the lower and upper leg that are in a straight line with each other. A human leg goes up to your knee and angles off to the side, because your hips are wider than your knees. What he found was a tree-climbing monkey. The bones of a Clydesdale are slightly bigger than a regular horse. What he found was a heavy duty chimpanzee. There are big horses and little horses today, by the way. Louis Zoo put human feet on their Lucy display. Not one foot bone or hand bone was found. Professor Menton at Washington University said: I prefer smaller words. The zoo director said: We cannot be updating every exhibit based on every new piece of evidence. We look at the overall exhibit and the impression it creates, and we think this impression it creates is correct. You mean your theory is more important than the facts? They will lie to the kids going through these science centers and zoos, to make them believe this evolution theory! And there are lies in the textbooks; like 60 of them! We cover that on video 4, Lies in the Textbooks. Perfectly normal human footprints! They studied the footprints and said: He went and found a place where people never wear shoes. They never wear shoes ever! And he studied their footprints. He had them run through the mud,

walk through the mud, you know, jog through the mud, trot, and skip. He said the footprints of these people that never wear shoes are exactly like the footprints found in Laetoli, Africa. And then he said: Well how do you know better? Now keep in mind not one bone was found. No bones are found. If you find perfectly normal human footprints, what would justify you putting dark-skinned, apelike creatures walking there on your drawing? And if I was African American, I would be upset that they always use dark skin on the missing links! And why did they add this toe separation? Notice the big toe is separated away from the rest of them on the picture. Apes have a toe that sticks off to the side like a thumb. If you want to practice that, I suggest that you start on a low branch for practice, ok. Because you are gonna hurt your head. And they gave every one of these so-called missing links human feet. Because the foot is a serious problem for the evolutionists. Lucy 2 Charles Oxnard studied Lucy and said: He did a computer multivariate analysis of the bones, ok.

Chapter 2 : Creation Seminar 7 - Questions and Answers (Part 2 of 2)

Seminar 2: The Garden of Eden. Introduction. Well thank you for joining us. My name is Kent Hovind. I taught high school science for fifteen years; and now for sixteen years I've been doing seminars on creation, evolution, and dinosaurs.

Tips and tricks July 3, Video: Kent Hovind " www. And I recommend that magazine. I disagree with a couple of things in them; but, you know, I disagree with everybody about something, except me. They have a good article about the Green River Formation, if you want to read that. Or you can go to their website "Creation Ministries International" at: The Green River Formation is a layer of rock in Wyoming that contains possibly hundreds of thousands, if not millions, of finely stratified layers. Well, if you go to our museum, you can get that little glass thing with two pieces of glass and different colors of sand in between. You flip it over, and it makes dozens and dozens of layers in a matter of a few seconds. They call them annual layers because of the pollen. Well, the truth of the matter is, all those things would sort very rapidly, just like the thing in our museum sorts things very rapidly. There are only two densities of colored sand in there " black and white; but it will make, you know, 40 layers in a few seconds; multiple layering, massive layering forms quickly. If you dig through this Green River Formation, you find layers of ash in there, from apparently a volcanic eruption. As they drill down through the ash, they count the number of layers between the two ash layers. The numbers of layers of Green River Formation. You drill one hole, you have got layers; you drill another hole, you only got, you know, 60 layers. Why would that be if those layers are really annual cycles? Then they should be consistent throughout the whole thing, but it simply is not. So get the article from "Creation" magazine. If somebody ever says to you that the Green River Formation proves that the earth is millions of years old. The idea that there has been life on Mars has been around for decades. Well, the Mars Rover went up there. More than one have gone up there- quite a few failed, you know. Good proof against evolution. But, they sent this multi-billion dollar machine up. It landed on Mars, tested the soil, and could not even find a trace of a germ on Mars. Now Walt Brown says in his book, "In the Beginning" if there is anything found on Mars, and there may be bacteria found on Mars, he says he predicted that , it came from Earth during the Flood when the fountains of the deep broke open. He said there would be enough pressure of 10 miles 16 km of rock pushing down on water to shoot things into orbit from earth, that would then float around for a few hundred or a few thousand years, until they happened to get caught in a gravitational pull of whatever. He thinks there might be stuff on Mars, and it would have come from planet Earth. But there have been 35 missions to Mars. Two thirds were complete or partial failures. Lots of money we have spent trying to prove life on Mars. Well, I think the whole purpose of the space program anymore is to prove evolution. This little rock you see a picture of here, sample ALH Now this rock was actually found near the South Pole. On that rock there is a little wiggly line right there in the red circle. That little line they said looks like a fossilized bacteria. This is under a microscope, highly magnified. I mean, quite a distance from the Earth. The closest they ever get in their orbits is about one-half an astronomical unit AU. Or about 45 million miles 75 million km. If we shrank all the planets down to the size of tomatoes, and Earth was an average four-inch 10 cm tomato, Mars would be a two-inch 5 cm tomato. And the closest it ever gets in its orbit would be about a third of a mile away at that scale. They say something hit Mars and knocked that rock over to Earth. I want you to shoot a two-inch tomato, so that a piece of it splatters a third of a mile away, and lands on a four-inch tomato. There ought to be something to indicate it was blasted that hard to shoot something that far. Well, basically what happened was that NASA was trying desperately to get their grant money through Congress. They claimed the rock came from Mars; they claim it broke off 16 million years ago, drifted through space, and finally landed 13, years ago near the South Pole. The truth of the matter is, that this rock was in the closet in NASA for about 7 years. My questions would be, what did this bacteria eat for these 16 million years, while it was flying around through space? How did it survive the impact of the initial thing blasting it out; the vacuum of space; the re-entry too. Going to melt the whole thing; and then be frozen for 13, years, near the South Pole? It was a NASA funded team that did the research on the rock. The hidden agenda was always present,

"Send more money to do more research. If only we had more money, we could do it. As soon as the announcement was made about the Mars rock, the grant money was released. Congress voted to give NASA 40 billion dollars. But thanks for the grant money. It is just simply a carbonate crystal that forms naturally on rocks. The Bible says Eve is the mother of all living. I do not believe that there is life on other planets. There is no evidence at all of any life on any other planet, except right here on Earth. A question that frequently comes up is, what about theistic evolution? Well, of course that depends on what you mean by God. Osama Bin Laden believes in God. Mormons believe in God. When they say, "Our Heavenly Father," they are praying to Adam. So what do you mean by God? The God that would create by using process of evolution would be cruel, wasteful and retarded. The weakest is destroyed in evolution, not protected. Jacques Monod, a Nobel Prize winner said, "Natural selection is the blindest and most cruel way of evolving new species and more complex organisms. The struggle for life and elimination of the weakest is a horrible process, against which our whole modern ethics revolts. An ideal society is non-selective, where the weak is protected, which is the opposite of the so-called natural law. He said, "I am surprised that a Christian would defend the idea that this is the process which God set up, to have evolution. What kind of God do they have anyway? Philosopher David Hull said, "Whatever the God implied by evolutionary theory and the data of natural history may be, he is not the Protestant God of waste not, want not. He is not even the awful God portrayed in the book of Job. The God of Galapagos is careless; he is wasteful; he is indifferent; he is almost diabolical. And I would have to agree. Charles Darwin in his book said, "From the war of nature, from famine and from death, the most exalted object we are capable of conceiving, the production of higher animals, directly follows. But there are people who teach theistic evolution. He made it right the first time. So I do not believe God would use evolution to get us here, for several reasons. I think they are talking about a different God. This is not the character of the God of the Bible. And He finished His works from the foundation of the world. Over and over it calls it the seventh day, and the Bible says real clearly that man brought death into the world I Corinthians. If theistic evolution is true, then death brought man into the world. Or death was here before man arrived, and the Bible says clearly man brought death into the world. So if the original created man was some kind of animal that slowly evolved, then what does God look like? You know, is He a baboon? And it certainly, number four, it nullifies the need for the death of Christ. Everything about evolution is backwards to the Bible. You can look at the chart there, and see, everything is backwards. The Bible says "man brought death into the world. Evolution says "death brought man into the world. The Bible says "God created man. Evolution says "man created God. Does evolution match the Bible?"

Chapter 3 : Creation Seminar by Dr. Kent Hovind

Kent E. Hovind (or, use his full academic title Kent E. Hovind, inmate) is a young Earth creationist, promoter of imminent millennialism, and convicted felon.

The Bible dates put the creation about years ago. Kids riding dinos God made a beautiful creation with no suffering or death. And he said, I heard thy voice in the garden, and I was afraid, because I was naked; and I hid myself. And he said, Who told thee that thou wast naked? Hast thou eaten of the tree, whereof I commanded thee that thou shouldest not eat? And the man said, The woman whom thou gavest to be with me, she gave me of the tree, and I did eat. And the woman said, The serpent beguiled me, and I did eat. And the LORD God said unto the serpent, Because thou hast done this, thou art cursed above all cattle, and above every beast of the field; upon thy belly shalt thou go, and dust shalt thou eat all the days of thy life: And I will put enmity between thee and the woman, and between thy seed and her seed; it shall bruise thy head, and thou shalt bruise his heel. And unto Adam he said, Because thou hast hearkened unto the voice of thy wife, and hast eaten of the tree, of which I commanded thee, saying, Thou shalt not eat of it: And God looked upon the earth, and, behold, it was corrupt; for all flesh had corrupted his way upon the earth. Make thee an ark of gopher wood; Gen. Why did God use a flood and not just have all the bad people die? Things to consider concerning the flood. The flood left evidence where a miracle would not. The warning time gave them a chance to repent. There are several theories about what caused the flood. I will share my theory in a few minutes. We first need to understand what the original earth was like. This is explained in detail on video 2 The earth was created with water under the crust. And the rain was upon the earth forty days and forty nights. When I made the cloud the garment thereof, and thick darkness a swaddlingband for it, And brake up for it my decreed place, and set bars and doors, And said, Hitherto shalt thou come, but no further: Merrill Earth Science p. The shapes of the continents seem to fit. Similar fossils found on opposite sides of oceans. This is evidence of a flood! The evidence given to support continental drift 1. Magnetic reversals in the mid-Atlantic ridge. Mexico and Central America are gone. McGraw Hill Earth Science, p. Europe and South America have been rotated counterclockwise and Africa clockwise. The earth has a solid crust. It is not hollow under the oceans! Holt Earth Science p. The water rushed into the cracks, cooling the basalt and locking in a stronger magnetic signature. Walter Brown has more on this. Also Scientific Creationism by Henry Morris p. Walt Brown- Hydroplate theory. Brown, there is no place on the ocean floor where a north seeking compass will point south! Merrill Earth Science, p. There is only enough sediment in the ocean for a few thousand years of erosion. Textbooks teach that the continents are moving apart as fast as your fingernails grow. Scott Foresman Earth Science p. They have always been moving. The rate has always been what we see today. Students should be told of other options instead of being brainwashed to believe only the evolutionist option. If I see someone headed east on I 10 at 70 mph Does that prove they started in L. Continental drift theory is trying to avoid two problems for those who want the earth to be billions of years old: The magnetic field is getting weaker making the earth less than 25, years old. There is very little sediment in the ocean. What about the Ice Age? Where does that fit in the Bible? The earth certainly had at least one Ice Age. There are several theories about how it fits the Bible. Beresovka Mammoth found Holt Earth Science, p. In the Beginning Walt Brown p. Undigested food in their mouth and stomach 3. Died of suffocation- no water found in lungs 4. Small ice crystals in blood Probably froze in less than 5 hours. He told me they had recently drilled through feet of permafrost and then drilled straight through a tree, feet tall, standing up! Many scores of people have influenced my thinking on the subject of the flood over the years. Some of the most influential have been: I alone must bear the responsibility if it is wrong. See James 3 Science review 1. The inverse square law The Inverse Square Law: When the distance is halved between two attracting bodies, the force of attraction is quadrupled. The Inverse Square Law: D The force of attraction between two objects is inversely proportional to the square of the distance between them. When the Gravity distance is Light halved the force Magnetism of attraction is quadrupled. Hovind at 10 feet. Hovind at 5 feet.

At this distance the force of attraction overpowers all resistance! The inverse square law 2. The spinning top A spinning top wobbles for a while when struck, then stabilizes. The colonnade aimed at the summer solstice. The famous Australian astronomer George Dodwell did a study of the solstice shadows recorded by the ancients. Eudoxus, Amen-Ra, Stonehenge, etc. This is what causes our seasons. While the earth remaineth seedtime and harvest, and cold and heat, and summer and winterâ€¦ shall not cease. The spinning top 3. There is little or no water on Mars. Glenco Earth Science , p. When that crater filled up, said geologist Ross Irwin, the water eroded away a ridgelike barrier and was sent rampaging across a plain. The force and volume of the water was enough to carve a valley 6, feet 2, meters deep and miles kilometers long within a matter of months, he said. Irwin said the study presents more evidence that Mars, now a cold, dusty place with water existing only as buried ice, was once wetter and warmer. He said some researchers have estimated that up to 40 percent of the Martian surface could have been covered with water, although that estimate will take more research to confirm. The water is thought to have come from precipitation â€” rain or snow â€” from a warm atmosphere. Mars now has only a very thin atmosphere. Irwin said a detailed analysis of pictures from the Mars Global Surveyor show the planet once had a lake that covered more than , square miles 1. This lake spilled into and filled up a nearby, mile-wide kilometer-wide impact crater. The Martian valley has a broad riverbed on its floor, miles in width, in contrast to the relatively narrow riverbed on the floor of the Grand Canyon. The Mysner effect A train in Japan suspended on super-conducting coils. Physical Science A Unified Approach p. The Mysner effect 5. Comets in space 6. The pre-flood world was different layer of water above atmosphere SFES p. The pre-flood world was different 8. The pre-flood world had a layer of water under the crust.

The cavemen. What is meant by 'caveman'? We are going to continue now talking about the garden of Eden and what it was like. On seminar part 2b here, we're gonna talk about the cavemen, and quite a few other topics.

The three heavens So, Genesis chapter 1 says: Some people say it must be the dirt, you know, because the dirt keeps the water away from the water. Read down, in verse 20, and it says: The birds do not fly in the dirt, ok. The birds fly in the air. The Scripture interprets itself. The second heaven is where the sun, moon, and stars are. The third heaven is only mentioned once in the Bible, right here in II Corinthians chapter 12 v. The Apostle Paul is telling the story about the time he got rocked to sleep, I mean, stoned to death, and he said he was caught up to the third heaven. Three heavens, mentioned in the Bible: The first heaven, where the birds fly; Second heaven, where the stars are; Third heaven, where God lives. Lutherans take off first, pheww Then He divides it up into three slices, first heaven, second heaven, third heaven. The Bible says the Lord sits on many waters. Maybe this whole thing that we see, this huge universe with all these bazillions of stars. Maybe the whole thing is surrounded by water. That you pick up and you shake once in a while, you know, and the snowflakes float around, you know. But Isaiah tells us: Christians have never taught the earth is flat. Some heathens have believed that and tried to blame it on the Christians. The Bible says God made the earth first, and then the stars. So the question is, How did the stars get from here to there? Not how did the light get from there to here? We cover more on that on video 7. But He stretched out the heavens. There used to be a 7th layer. It was a layer of water or ice above the atmosphere. All we can do is make a theory about it. This is called the Canopy theory, which says there was a layer of water or ice, probably ice, above the atmosphere. I happen to believe it was probably 10 or 20 inches of ice, super-cold ice, suspended by the magnetic field. You know how a magnet can float on top of another magnet? We cover more on that on video 6. But the earth could have had a canopy of ice suspended in the magnetic field, which would float it above the earth. This ice or water would block out UV light, some of it; it would increase air pressure. Today the air is about a hundred miles thick. It would squeeze it all down probably to 10 or 20 miles and double the air pressure on the surface. And the ice clouds float to the North and South Pole and hover there about 50 miles above the arctic. Ice clouds that are floating! But, article about that here. Probably super-cold ice, ok. There was not only a canopy of water above the earth, there was water in the crust of the earth. But inside the crust of the earth, there was water. Water under the crust of the earth By the way, there is still lots of water in the crust of the earth. Otherwise you could not have hot water vents shooting up into the bottom of the ocean. If you have hot water squirting up into the bottom of the ocean, where does it have to be coming from? Still huge hot water vents in the bottom of the oceans! We cover more of that in the hydroplate theory on video 6. But, I think the earth today still has cracks, where it broke open at the time of the Flood. I taught earth science for years. None of them are my fault. The question is, When did all this happen? Now the evolutionist will tell you: I was debating an atheist one time; and during Q and A time, this student stood up and said: But this canopy of water that used to be there in the original creation would make the whole earth like a big greenhouse. How many know what a greenhouse is? You have to dress in the basement, if you live in a greenhouse! Well, scientists are still finding lots of water in space between the stars. A lack of oxygen? Why would they say that? Well, they had a big symposium in A bunch of scientists got together to study the apatosaurus. An foot Apatosaurus had nostrils the same size as a horse. How is an foot 24 m animal going to get enough air, through nostrils the same size as a horse? Well, apparently they did breath, because bones of dinosaurs are found all over the planet, even in Antarctica and Alaska. I mean, dinosaurs lived everywhere, ok. So how could an foot animal get enough air? But I think before the Flood came, they had this canopy of air or of water or ice, that would increase air pressure. Plus, they had richer oxygen. You know when they drill into the amber How many saw the movie Jurassic Park? You know, where they drilled in to get the mosquito blood out? We cover all that on video 4 about how life began. It could not have evolved with oxygen, or without oxygen! Or mother-in-law, by the way Actually, my wife had a great mother-in-law. I think before the Flood came, I think things were a whole lot different. With increased oxygen you would heal up much faster. Eighteen months old, her left leg

DOWNLOAD PDF HOVIND SEMINAR PART 2

slipped down into a pipe, her right leg came up behind her, and she did the splits as she slid down inside an 8-inch steel pipe. They tore up the whole neighborhood trying to get that kid out of that well. It was on the news about every 15 minutes, remember that? Her right leg was totally black because it had been twisted around and stuck in her face from behind, doing the splits. One of the doctors said: They put Jessica in one of these chambers, filled it up full of pure oxygen, and pumped it up to double normal pressure. Within a few hours her leg turned pink. They saved her leg. They did have to amputate half of her little toe, ok. It beats losing a leg by a long shot! By the way, you know what you call a girl if one leg is shorter than the other? Just a little bit of trivia there, ok. There is a hyperbaric chamber in Pensacola, Florida. This one in Pensacola holds 30 people in an emergency. A lot of hospitals are getting these hyperbaric chambers. Does UT Medical Center have a hyperbaric chamber? Do you know how big it is? Is it a one- or two- or three-person chamber? In England they are treating multiple sclerosis. They treat all kinds of diseases with these hyperbaric chambers. In India they are treating leprosy, and getting incredible results. Here is a kid being treated for cerebral palsy with hyperbaric oxygen.
