To monitor performance, an administrator has set thresholds on a system metric and notices that over time, the metric score has changed from green, to yellow, to red, and then back to yellow. Which system metric is the administrator monitoring? For Audit logging level for mobile service, select any value except for Minimal. The following logging levels can be specified to enable audit logging: Basic, Request, Trace, and Full. The Minimal logging level disables audit logging. An administrator sees that an environment has a long startup time and wants to remedy the issue. Which solution should be used? Set load balancing to cluster compatible. Increase the size of the JVM heap by selecting Large configuration. Reduce the size of the Content Store through archiving and removal. If your installation includes more than one dispatcher, you can specify the proportion of requests that each dispatcher handles by changing their processing capacity. This is commonly referred to as load balancing. You typically set the capacity for a dispatcher based on the CPU speed of the computer where it is installed. An administrator has set up audit logging but needs to diagnose, trace, and filter for a specific user during peak period of system usage. How can this be done? Delete the appended ipfclientconfig. Set up the Audit Reports package and open the "Users and Reports report", and filter on the user id. A detailed view showing the status of individual system metrics for a service References:

On the Configuration tab, click Query Service Caching. The status of the Clear cache command is displayed. If a cache is being used by one or more pending reports or queries, it is internally flagged as "stale" by this command and is automatically cleared as soon as this usage completes. At the same time, there is a need to control the memory usage and Clear Cache. How is this done? Control of the memory usage and scheduling of the Clear Cache is a default setup. To avoid using outdated data that might be stored in the cache, you can clear the cache. You might want to clear the cache manually if your data source metadata changes infrequently or if you want to clear the cache in between automatically scheduled cache clearing. When you clear the cache using the following steps, it clears everything in the cache. To monitor performance, an administrator has set thresholds on a system metric and notices that over time, the metric score has changed from green, to yellow, to red, and then back to yellow. Which system metric is the administrator monitoring? Percentage of successful requests B. A detailed view showing the status of individual system metrics for a service References:
