

Chapter 1 : Interactive Science Notebook Worksheets - Printable Worksheets

Build your own interactive notebooks using downloadable parts in PNG, PDF, or PPTX formats.

Yes, I am enjoying my summer vacation, but, there is always that part of my brain reserved for school, the part I cannot shut off or ignore. I stopped trying to ignore it years ago! I have always been intrigued by the idea, and I decided to give it a try towards the end of this past school year. My first graders enjoyed being interactive notebook guinea pigs! For several weeks, my students completed numerous activities in their notebook and we all loved the experience SO much, that I decided to dedicate my life to making interactive notebooks that align with our Journeys reading program. AND since I know many teachers do not use Journeys, I also made a set of grammar and phonics notebook activities for first graders who are not using the series. During the weeks that my students were guinea pigs, they were ALL so attentive and eager to participate in the activities. There were no moans, no spaced out looks, and definitely no complaints. This type of learning and these types of activities involve so much more than just listening to the teacher. They are also using their creative side, and cutting, gluing, coloring, writing, thinking, and planning. When I first introduced the activities, we did them all whole group. Once they got the hang of it and I saw how much they enjoyed it, I put some of the activities at their stations. Not the reading activities though. I will always do the reading activities as a whole group lesson. Here are some pictures I snapped while my students were working. Since I took these pictures, I have changed the labels at the top of each page and fine-tuned some other things. My students were very helpful in telling me what worked well and what needed to be changed. I listened to them and used their ideas when I created my activities. I also repeated a lot of the activities throughout the lessons. Although the skills change, the template remains the same. If they forgot how to do something, they just looked back to a previous lesson for assistance. Using interactive notebooks is a great way for children to learn and interact with new information, as well as, review and practice skills already introduced. In addition, having all of this important information in their notebooks served as a very useful and necessary learning tool. My students were able to refer back to their notebooks if they forgot something and needed a refresher. They really took pride in their notebooks, and were very proud to share their work with others. Unlike completing worksheets or other printables, which go home right away, these books are always available to the children. I made interactive notebook activities that align with ALL 30 lessons in the Journeys reading program. For each lesson, there are sight word, phonics, grammar, and reading activities that will definitely excite and engage our students. Each activity comes with a label that includes an I can statement. All lessons are labeled with the lesson number to help keep you and your students organized. Also included, are explicit instructions on how to complete each activity and the common core standard it covers. In some cases, the photo shows a different skill being taught, but the interactive template is the same. There are also quite a few different notebook covers for you to choose from. I plan on keeping all of the activities in one notebook, but I know some teachers would prefer to have separate notebooks for sight words, grammar, phonics, and reading. I bundled them together at a discounted price. Only Unit 1 and the bundle contain the sight word dictionary. The dictionary consists of six different pages, all containing the sight words for the year. My students will glue this into the front of their notebook during the first week of school. As I introduce the new words each week, the children will highlight them in their notebook. This will help them remember which words were taught and keep them accountable for spelling them properly. If they forget how to spell a word, they can refer to their notebook. The last page contains blank lines for them to add in words that are important to them and that they want to spell properly. As mentioned earlier, in addition to the interactive Journeys activities, I also took the SAME grammar and phonics activities and made interactive notebook pages for those who do not follow Journeys, but are looking to use interactive notebooks with your first graders. If you click [here](#) and [here](#) , you can see all the grammar and phonics skills included in these packs. I urge you to give interactive notebooks a try! Your students will definitely benefit from keeping these notebooks. In addition, they will learn valuable organizational skills. The only prep work for you is to print and copy. Imagine not having to plan your daily grammar, phonics, sight word, and reading lessons? Sounds good to me! Journeys Interactive Notebook Links.

Chapter 2 : Math “ Notebooking Fairy

This alphabet interactive notebook is intended to supplement your teaching for letter recognition and phonetic awareness. It is intended to be assembled over a period of multiple days (or even weeks if you prefer to do the coordinating pages as you learn the letters).

But I was completely wrong. They are personal tools for students to process ideas and concepts. The more students interact with the information have multiple senses connected with it , the more they can retain knowledge. This makes sense to me because even though I love technology and would never want my students to be without access to their laptops, I still firmly believe writing with a pencil and reading a physical paper book helps my students remember and connect more deeply with the text. I created a variety of resources and have bundled them all together here: My bundle includes all of the following original products from my store. I created these tabbed mini-books to use with both fiction and nonfiction text: They also cover these reading informational standards and language standards: These are handy for using with individual stories and novels. Students can easily refer back to them later and compare two texts with one another. Plus, they are easy to put together: Students can just assemble the pages and staple them. They can be affixed inside an existing notebook or not. Teachers can add as many or as few pages to the books. This can be helpful for the plot analysis events and the vocabulary analysis book, both shown above. Even if your state does not use the CCSS, you can still utilize these resources. The skills practiced still involve essential reading and critical-thinking skills. I separated the foldables by standards, but they are not labeled on the templates themselves. It includes over 90 different activities, which are scaffolded for introducing skills and differentiated for progressing into more advanced skills. One of the more difficult activities for my students over the past few years has been analyzing an event to see how it provokes a decision, propels the action, and reveals aspects of a character. The foldable above has students write each response on a clock face, then stack on top of each other and staple for a complete analysis of an event below. Reading standard 9 Secondary students may also appreciate graphics they can relate to. A secondary interactive bundle would not be complete without the Bard, right!? Comment below with your experience using interactive notebooks in your classroom. Thanks for stopping by and sharing!
