Chapter 1 : Science, ethics, and medicine (edition) | Open Library

Get this from a library! Science, ethics, and medicine. [H Tristram Engelhardt, Jr.; Daniel Callahan;] -- This book represents an initial attempt to do that which we at least can no longer avoid: to ask about the origin and validity of our moral assumptions, to see the way in which ethics and science.

Bioethics as a Plural Noun 2. The Intellectual Bases of Bioethics 3. The Principles of Bioethics 4. The Context of Health Care: Persons, Possessions, and States 5. The Languages of Medicalization 6. The Endings and Beginnings of Persons: Death, Abortion, and Infanticide 7. The Many faces of Freedom 8. Frustrations in the Face of Finitude 9. Reviews and Awards "Engelhardt has done it again--the second edition of *The Foundations of Bioethics* presents a powerful and controversial challenge and alternative to major frameworks of bioethics. It is not possible to do bioethics responsibly without close attention to this important book. Thoroughly recommended to anyone with a real interest in medical ethics. This is a religiously powerful and candid reading by the author of his more philosophical arguments in the first edition of *The Foundations of Bioethics*. In effect he resituates the discourse of the first edition by making candid the theological presuppositions that conformed it. This is the most important book that has been written since the beginning of that strange project called bioethics. His is a bioethics meant for moral strangers, not for moral friends. Since we do not agree with each other about what is good, we no longer have a moral foundation for determining what is right. Hence, we must settle for the next best thing: Using the powers of our will and what is left of reason, we can agree to cooperate and to live with the contradiction expressed in the words: The scope of the book is wide and Englehardt maintains a high standard of argument throughout The book is certainly challenging, and both radicals and conservatives will find parts of it uncomfortable and dangerous. Bioethics badly needs such danger, for the perils of thinking that the dilemmas of modern medicine can be navigated without risk are much greater. Excellent discussion of personhood and analysis of problems.

Oxford University Press is a department of the University of Oxford. It furthers the University's objective of excellence in research, scholarship, and education by publishing worldwide.

Knowledge, value, and belief by H. Tristram Engelhardt Book 6 editions published in in English and held by WorldCat member libraries worldwide Innovation and the pharmaceutical industry: Tristram Engelhardt 10 editions published between and in English and held by WorldCat member libraries worldwide Innovation and the Pharmaceutical Industry: Critical Reflections on the Virtues of Profit examines the central role of profit in the development of pharmaceuticals, medical devices, and health care generally. Recent efforts to understand this role have often underestimated and even dismissed its importance, arguing for its replacement by other means and mechanisms. However, as the essays in this volume attest, it would be impossible to account adequately for the range of pharmaceuticals and medical devices that have become part of everyday medicine without recognizing that the depth and scope of innovations are tied not simply to altruism, a concern for the common good, or the pursuit of knowledge for its own sake, but crucially to the pursuit of private good and of individual profit. Balancing a concern for theory and practice, the analyses and evaluations provided in these essays touch directly on many of the most heated and important debates in pharmaceutical ethics, such as profit margins, corporate social responsibility, drug advertising, litigation, patents, and parallel trade. Reflecting critically on the problems and prospects of medical innovation, they invite a rethinking of the foundations of the bioethics and business ethics of the pharmaceutical and medical device industries by focusing on the long-term impact of policy decisions for human health and well-being The law-medicine relation: Problems arising from this interaction have been addressed, in part, by previous volumes in this series. In fact, one such problem constitutes the central focus of Volume 5, *Mental Illness: Law and Public Policy* [1]. The present volume joins other volumes in this series in offering an exploration and critical analysis of concepts and values underlying health care. We do so out of a conviction that medicine and the law must be understood as the human creations they are, reflecting important, wide-ranging, but often unaddressed aspects of the nature of the human condition. It is only by such philosophical analysis of the nature of the conceptual foundations of the health care professions and of the legal profession that we will be able to judge whether these professions do indeed serve our best interests. As a consequence, this volume attends as much to issues in public policy as in the law. The law is, after all, the creature of human decisions concerning prudent public policy and basic human rights and goods Bioethics critically reconsidered: Tristram Engelhardt 17 editions published between and in English and Undetermined and held by WorldCat member libraries worldwide A Skeptical Introduction to Bioethics - H. Yesley -- The Genesis of a Totalizing Ideology: Paternalism, and Bioethical Principlism -- Aaron E. Cherry -- The "s" in Bioethics: Past, Present and Future -- Ana S. Iltis and Adrienne Carpenter. Some Critical Reflections -- H. The Incredible Search for Bioethical Professionalism: Tristram Engelhardt Book 25 editions published between and in English and Dutch and held by WorldCat member libraries worldwide This work contains the proceedings of the First Trans-disciplinary Symposium on Philosophy and Medicine, which examines the philosophical theory behind medicine and diseases Mental health: Moreover, in their diversity these papers point to the many descriptive, evaluative, and, in fact, performative functions of statements concerning mental health. Before introducing the substance of these papers in any detail, I want to indicate the profound commerce between philosophical and psychological ideas in theories of mental health and disease. This will be done in part by a consideration of some conceptual developments in the history of psychiatry, as well as through an analysis of some of the functions of the notions of mental illness and health.

Chapter 3 : Engelhardt, leading bioethicist and longtime philosophy professor, dies at 77

Science, ethics, and medicine by H. Tristram Engelhardt, Daniel Callahan; 1 edition; First published in ; Subjects: Medical ethics, Science, Moral and ethical.

Bishop In this original and compelling book, Jeffrey P. Thisground-breaking work in bioethics will provoke thought and argument for all those engaged in medicine, philosophy, theology, and health policy. He defends this claim decisively and with urgency. To say this book is the most important one written in the philosophy of medicine in the last twenty-five years would not do it justice. This book is destined to change the way we think and, hopefully, practice medicine. Public Policy, Biotechnology, and the Kass Council Adam Briggie Several presidents have created bioethics councils to advise their administrations on the importance, meaning, and possible implementation or regulation of rapidly developing biomedical technologies. Bush, was under the leadership of Leon Kass. The Kass Council, as it was known, undertook what Adam Briggie describes as a richer understanding of its task than that of previous councils. The council sought to understand what it means to advance human flourishing at the intersection of philosophy, politics, science, and technology within a democratic society. The second part treats the Kass Council as a case study of a federal institution that offered public, ethical advice within a highly polarized context, with the attendant charges of inappropriate politicization and policy irrelevance. *Creating Life, Destroying Life, and Protecting the Rights of Conscience* Christopher Kaczor Questions about the dignity of the human person give rise to many of the most central and hotly disputed topics in bioethics. Finally, what are the duties and prerogatives of health-care professionals who refuse in conscience to take part in activities that they regard as degrading to human dignity? Few authors approach bioethics from a natural law perspective, and few do it as well as Christopher Kaczor. The book should be of interest not only to natural law philosophers and their students, but also to anyone interested in bioethics. *A Pellegrino Reader* Edited by H. Pellegrino has played a central role in shaping the fields of bioethics and the philosophy of medicine. In this anthology, H. Arguing that bioethics should not be restricted to topics such as abortion, third-party-assisted reproduction, physician-assisted suicide, or cloning, Pellegrino has instead stressed that such issues are shaped by foundational views regarding the nature of the physician-patient relationship and the goals of medicine, which are the proper focus of the philosophy of medicine. Pellegrino and a comprehensive Introduction by the editors. The carefully selected essays show Dr. Pellegrino in action, working to articulate his guiding vision as well as draw out its implications, always at the same time tying his speculations to clinical experience. There simply is no one else who has been doing this at anything like the intellectual level of Dr. The single most important physician-philosopher in that rebirth has been Edmund Pellegrino. His contributions to virtue theory, the concept of beneficence, the dispute over the internal and external sources of a morality for medicine, and the role of the Hippocratic tradition are all critical. The essays collected in this volume have changed the history of the philosophy of medicine. He shows that philosophy of medicine can be done with both passion and compassion. Pellegrino, Adam Schulman, and Thomas W. Adam Schulman is a tutor at St. Daniel Davis, Daniel C. George, Paul Weithman, Daniel P. Some argue that human dignity has lost its traditional meaning. Others, by contrast, hold firmly to the view that dignity is an essential identifying and irreducible element of human nature. Still others take a more biological than philosophical or theological viewpoint on the question of the meaning of human dignity. An appreciation of the variety of these views is critical, if we are to understand the divergences in how we think and act in response to the challenges posed by contemporary bioethics.
