

Chapter 1 : More Than Enough : The 10 Keys to Changing Your Financial Destiny by Dave Ramsey | eBay

Keys #2 and #3 work hand in hand to help you take control of your financial destiny. When you construct financial plans that are set in anticipated dollar amounts, rates of returns, and timeframes, you will have the criteria with which to judge whether.

As a best practice, Microsoft recommends that you create new Azure subscriptions for use with Customer Key. For example, using your work or school account that has global administrator privileges in your Office organization. For detailed steps, see [Sign up for Azure as an organization](#). In order to achieve this, you must create two Azure subscriptions. As a best practice, Microsoft recommends that you have separate members of your organization configure one key in each subscription. In addition, these Azure subscriptions should only be used to administer encryption keys for Office. This protects your organization in case one of your operators accidentally, intentionally, or maliciously deletes or otherwise mismanages the keys for which they are responsible. We recommend that you set up new Azure subscriptions that are solely used for managing Azure Key Vault resources for use with Customer Key. There is no practical limit to the number of Azure subscriptions that you can create for your organization. Following these best practices will minimize the impact of human error while helping to manage the resources used by Customer Key. Once you have submitted a request through the FastTrack web portal, Microsoft verifies the Azure Key Vault configuration data and contact information you provided. The selections that you make in the offer form regarding the authorized officers of your organization is critical and necessary for completion of Customer Key registration. The officers of your organization that you select in the form will be the used to ensure the authenticity of any request to revoke and destroy all keys used with a Customer Key data encryption policy. To submit an offer to activate Customer Key, complete these steps: Using a work or school account that has global administrator permissions in your Office organization, log in to the Microsoft FastTrack portal. Choose Offers, and review the list of current offers. Choose Learn More for the offer that applies to you: Exchange Online and Skype for Business: On the Offer details page, choose Create Request. Fill out all applicable details and requested information on the offer form. Pay particular attention to your selections for which officers of your organization you want to authorize to approve the permanent and irreversible destruction of encryption keys and data. This process can take up to five business days once Microsoft has been notified of your request. Continue on to the mandatory retention period section below. Register Azure subscriptions to use a mandatory retention period The temporary or permanent loss of root encryption keys can be very disruptive or even catastrophic to service operation and can result in data loss. For this reason, the resources used with Customer Key require strong protection. All the Azure resources that are used with Customer Key offer protection mechanisms beyond the default configuration. Azure subscriptions can be tagged or registered in a way that will prevent immediate and irrevocable cancellation. This is referred to as registering for a mandatory retention period. The steps required to register Azure subscriptions for a mandatory retention period require collaboration with the Office team. This process can take from one to five business days. Previously, this was sometimes referred to as "Do Not Cancel". Before contacting the Office team, you must perform the following steps for each Azure subscription that you use with Customer Key: Log in to your Azure subscription with Azure PowerShell. For instructions, see [Log in with Azure PowerShell](#). Run the Register-AzureRmProviderFeature cmdlet to register your subscriptions to use a mandatory retention period. Resources Contact Microsoft to have the process finalized. For Exchange Online and Skype for Business, contact exock@microsoft.com. The Service Level Agreement SLA for completion of this process is five business days once Microsoft has been notified and verified that you have registered your subscriptions to use a mandatory retention period. Include the following in your email: Subscription IDs for which you want to have the mandatory retention period finalized. Once you receive notification from Microsoft that registration is complete, verify the status of your registration by running the Get-AzureRmProviderFeature cmdlet as follows: KeyVault" Create a premium Azure Key Vault in each subscription The steps to create a key vault are documented in [Getting Started with Azure Key Vault](#), which guides you through installing and launching

Azure PowerShell, connecting to your Azure subscription, creating a resource group, and creating a key vault in that resource group. When you create a key vault, you must choose a SKU: The cost of operations with keys of either type is the same, so the only difference in cost is the cost per month for each HSM-protected key. See Key Vault pricing for details. For each Office service with which you will use Customer Key, create a key vault in each of the two Azure subscriptions that you created. Use a naming convention for key vaults that reflects the intended use of the DEP with which you will associate the vaults. See the Best Practices section below for naming convention recommendations. Create a separate, paired set of vaults for each data encryption policy. For Exchange Online, the scope of a data encryption policy is chosen by you when you assign the policy to mailbox. A mailbox can have only one policy assigned, and you can create up to fifty policies. For SharePoint Online the scope of a policy is all of the data within an organization in a geographic location, or geo. The creation of key vaults also requires the creation of Azure resource groups, since key vaults need storage capacity though very small and Key Vault logging, if enabled, also generates stored data. As a best practice Microsoft recommends using separate administrators to manage each resource group, with the administration aligned with the set of administrators that will manage all related Customer Key resources. Important To maximize availability, your key vaults should be in regions close to your Office service. If your Exchange Online organization is in Europe, place your key vaults in Europe. Use a common prefix for key vaults, and include an abbreviation of the use and scope of the key vault and keys e. Vault names are globally unique strings within Azure, so you may need to try variations of your desired names in case the desired names are already claimed by other Azure customers. As of July vault names cannot be changed, so a best practice is to have a written plan for setup and use a second person to verify the plan is executed correctly. If possible, create your vaults in non-paired regions. Paired Azure regions provide high availability across service failure domains. This means that an Azure resource that is placed in one region is automatically gaining fault tolerance through the paired region. For this reason, choosing regions for two vaults used in a DEP where the regions are paired means that only a total of two regions of availability are in use. If possible, choose two non-paired regions for the two vaults used with a DEP. This benefits from a total of four regions of availability. Azure Paired Regions for a current list of regional pairs. Assign permissions to each key vault For each key vault, you will need to define three separate sets of permissions for Customer Key, depending on your implementation. For example, you will need to define one set of permissions for each of the following: Key vault administrators that will perform day-to-day management of your key vault for your organization. These tasks include backup, create, get, import, list, and restore. Important The set of permissions assigned to key vault administrators does not include the permission to delete keys. This is intentional and an important practice. Deleting encryption keys is not typically done, since doing so permanently destroys data. As a best practice, do not grant this permission to key vault administrators by default. Instead, reserve this for key vault contributors and only assign it to an administrator on a short term basis once a clear understanding of the consequences is understood. To assign these permissions to a user in your Office organization, log in to your Azure subscription with Azure PowerShell. This set of key vault contributors needs to be granted the Contributor role on your key vault. You can assign this role by using Azure Resource Manager. The administrator who creates a subscription has this access implicitly, as well as the ability to assign other administrators to the Contributor role. Setting permissions for Exchange Online and Skype for Business: You need to enable this configuration, referred to as Soft Delete, before you can use your keys with Customer Key. Enabling Soft Delete allows you to recover keys or vaults within 90 days of deletion without having to restore them from backup. To enable Soft Delete on your key vaults, complete these steps: Log in to your Azure subscription with Windows Powershell. In this example, vaultname is the name of the key vault for which you are enabling soft delete: If soft delete is configured properly for the key vault, then the Soft Delete Enabled? Creating a key directly in Key Vault is the less complicated method, while importing a key provides total control over how the key is generated. Tip Name keys using a similar naming convention as described above for key vaults. This way, in tools that show only the key name, the string is self-describing. Some organizations prefer this approach to establish the provenance of their keys, and the this method also provides the following: The toolset used for import includes attestation from Thales that the Key Exchange Key KEK

that is used to encrypt the key you generate is not exportable and is generated inside a genuine HSM that was manufactured by Thales. This attestation proves to you that Microsoft is also using genuine Thales hardware. Check with your security group to determine if the above attestations are required. For detailed steps to create a key on-premises and import it into your key vault, see [How to generate and transfer HSM-protected keys for Azure Key Vault](#). Use the Azure instructions to create a key in each key vault. Check the recovery level of your keys Office requires that the Azure Key Vault subscription is set to Do Not Cancel and that the keys used by Customer Key have soft delete enabled. You can confirm this by looking at the recovery level on your keys. Backup Azure Key Vault Immediately following creation or any change to a key, perform a backup and store copies of the backup, both online and offline. Offline copies should not be connected to any network, such as in a physical safe or commercial storage facility.

Money “we never seem to have enough of it and are always looking at ways to spend less of it. Few people take true control of their financial destiny. One way to have greater control over how much money you have is to be an entrepreneur. While not the right option for many if not most people, being your own boss has been the key to financial security for a large group of people. If you are looking for a way out of the grind of your 9-to-5, you might consider being your own boss. While the risks involved are many, the potential payout is exponentially greater than anything most people will ever see working for the man. Below are some pros and cons of being an entrepreneur: Pros to Being Your Own Boss It is easier to get a raise when you are in control versus being an employee. Your entrepreneurial success is generally tied to how hard you work. When working as an employee, most times your hard work is not recognized. Employees that work hard are rewarded the same as those that do the bare minimum to get by. There is no greater freedom from being your own boss, having the ability to do what you want, when you want, without someone telling you what to do. The upside has a huge potential. If you are a successful entrepreneur, you can have huge financial gains that are beyond the imagination of the typical employee. As a matter of fact, most small businesses fail in the first 5 years. Uncertain income can lead to a great deal of stress. Most likely, you will have to put in a lot of time and effort before you see any results. A successful outcome is never guaranteed, even if you put in the time and effort. You never really get away from your business. Even when you are on vacation, you are the person in charge. There is no such a thing as getting rich overnight as your own boss. Most people are not cut out to work for themselves. Most people should be employees, working for someone else. But, for the fortunate few that take the risks and become a successful entrepreneur, the potential payoffs are worth the pain it took to get there. Take Control of Your Financial Destiny While you are clipping your coupons and shopping for the best deal to try to stretch your dollars, just keep in mind that there may be another answer for you. Maybe you should take some time and consider if being an entrepreneur might be something that would be a good fit for you. Fortunately, you can explore your options while you keep your day job. You can even get your feet wet while you continue to work for the man, though doing so will be equivalent to working two full-time jobs, at the very least. Entrepreneurs control their financial destiny. They spend their time building a business that will give them the financial freedom they yearn for and deserve. You have the choice if you want to be an employee or if you want to be the boss. Choose wisely, as the decision you make will greatly impact your financial future. Guest post by Marshall Davis of Business Service Reviews , a website that reviews products and services that help entrepreneurs start, grow and maintain successful small businesses. His new interview series, Talking Small Biz , will shed some light on how different entrepreneurs are finding success in their chosen field.

Planetary numerologist, John Davis, has an important message for you: Neither was the name given to you by your parents. Both of these were determined by the unique energy you brought with you into this life. In other words, your destiny is encoded in your birth date and name. Have you ever felt that there MUST be a reason why things happen as they do? Have you wondered what you were meant to do with your life? And have you wished there was a clear pathway to success in life? Yes, I have the tools to help you discover these answers! Numerology is an ancient science. In fact, older than every other science now known to mankind. Originally set forth by Pythagoras, numerology is based on the idea that nothing happens by chance. Most numerologists tend to reduce your name and your birthdate to a single digit each. In other words, far too general to apply to you and you alone. A few numerologists may expand this with a half-dozen other single-digit numbers, but even this is far too general. In the history of this planet, there has never been another person exactly like you, and there never will. Any numerologist who reduces everything down to a single digit is throwing away valuable data. Every digit has meaning, as does every letter of your name. Furthermore, the relationships between the digits and letters carry additional meaning. Your personal reading will reveal the true keys to your destiny. John is also the director of Coptic Fellowship International, a modern philosophical organization based on the mystery schools of ancient Egypt. John has taken 29 tours to Egypt. John is also director of the Spiritual Unity of Nations S. This numerology scientific profile is a blueprint for the potential opportunities as well as challenges, karmic patterns, and hidden abilities. The secret language encoded in the name indicates past lives. The date of birth is the physical destiny. A new feature of his personality profiles pinpoints a hidden spiritual purpose given to each soul exactly nine months after their birth. All readings are recorded on a CD for your convenience. You may also use the Contact Form here on the website to start the process. John will need your date of birth as well as your full birth name. BTW - Numerology readings make excellent birthday and Christmas gifts!

Chapter 4 : Controlling your data in Office using Customer Key | Microsoft Docs

Few people take true control of their financial destiny. One way to have greater control over how much money you have is to be an entrepreneur. While not the right option for many (if not most) people, being your own boss has been the key to financial security for a large group of people.
