Chapter 2 : land use simulation for europe by john stillwell ebooks preview

Pdf file is about land use simulation for europe by john stillwell is available in several types of edition. This pdf document is presented in digital edition of land use simulation for europe by john stillwell and it can be searched throughout the net in such search engines as google, bing and yahoo.

Productive resources are limited. Therefore, people cannot have all the goods and services they want. As a result, they must choose some things and give up others. Living in a world of scarcity, we are continually faced with choices about how to use our limited resources, and we must recognize that our decisions impose opportunity costs. Choosing among uses of resources necessitates evaluating the costs and benefits of the alternatives. This role play simulates a common environmental dilemma as community members trying to decide where to locate a new school are faced with the costs “the alternative uses that must be given up” of any particular school location. The simulation consists of two rounds of decision-making, the second constrained by the introduction of existing environmental law and regulation. The debriefing questions help students to distill from their experience and articulate the implications of the basic economics concepts of scarcity, choice, and cost content standard 1. All choices impose costs and confer benefits. People choose and their choices are always rational. They choose the alternative they believe to have the greatest excess of benefits over costs. Resource management decisions are made by people not by organizations, governments, or societies acting as individuals, or as members of groups. Changes in rules and laws affect decision-making by changing costs and benefits. Display the site map on the overhead projector, pointing out the various features listed in the map key. Display the school prototype on the overhead projector and identify the components. Divide the class into small groups of students. Distribute copies of the instructions for the school siting committee, the site map, the map key, and 2 plastic school-prototype disks. Only 1 disk is necessary for the activity, but having a second help more visual students compare alternative sites. Allow groups approximately 10 minutes to discuss the problem and make a recommendation. Reconvene the large group. Where did you locate the school? Why did you choose this location? What values were most important to you in choosing a location? Expect a variety of answers. Some may value attracting business so that the town will experience economic growth and higher standards of living. Some may value environmental quality above all other things. What alternate sites did you consider? Encourage students to identify alternatives. This is not an all-or-nothing exercise, and in choosing a site, they have dismissed all other sites. The concept of opportunity cost requires recognition of the next-best alternative. What trade-off did you accept in locating the school where you did instead of in the alternate site? Encourage students to think in terms of costs and benefits. In recommending one location, they trade-off or give up the benefits of the alternate site. Explain to students that a lawyer on the town council has put together a packet of information about the laws and regulations that apply to the land being considered for the school. Wishing to avoid future problems, the council has asked the site selection committees to reconsider their decisions in light of the regulatory information. Ask students to return to their small groups. Where did you locate the school and is this a change from the first location you recommended? Why are you recommending this location? Also, anticipate that some students may have re-ordered their values and priorities based on the information they gained from the land use descriptions. What trade-off or opportunity cost did you accept in recommending this location? Again, focus on changes in the costs and benefits. Accept a variety of answers, focusing on how particular regulations or current land use changed perceptions of costs and benefits. Of choosing the alternative site you considered? How did the rules of the game constrain your thinking? Were there other solutions you might have considered had the rules been different? In what way do the rules support the values of your group members? In what ways do the rules undermine or conflict with the values of your group members? Who is very pleased with their final choice? Expect few to say that they are very happy. Seat the council members at the front of the room, with access to the overhead. Place the school prototype disks on the locations that have been recommended by the committees. The remaining students will role play community members attending the town forum on the new school. Give them the role cards so that they may read over their lines while the other students are setting up

the classroom for the council meeting. The secretary will help the council president conduct the meeting by calling speakers from the list of people who have signed up to address the council. Allow approximately 10 to 15 minutes for the council discussion. As a follow-up, ask the council to discuss and report their decision, or assign a brief assessment for homework in which students write paragraphs explaining how they would vote as members of the council and why.

Land use swap is pushed by means of various forces, together with spatial regulations formulated at supra-national, nationwide, nearby and native degrees. the main target of this booklet is to contextualise, clarify and illustrate a brand new technique for simulating land use switch in numerous elements of Europe.

Chapter 4 : Land Use Simulation Game - Pictured Rocks National Lakeshore (U.S. National Park Service)

Get this from a library! Land Use Simulation for Europe. [John C H Stillwell; H J Scholten;] -- Land use change is driven by a variety of forces, including spatial policies formulated at supra-national, national, regional and local levels.

Optional procedures may require additional class time Subject: Biology, ecology, social studies, economics Skills: Discussion, group participation, analyzing, public speaking Group size: For example, "During this investigation, we are going to participate in a simulation game concerning land use in a hypothetical community. We will analyze what we have done and present some ideas to enable you to develop your own simulation game based on local environmental issues or concerns. Students assume roles of decision-makers in a simulated environment, and compete for certain objectives according to specified procedures and rules. Inferring, recording and classifying possible uses of land. Distribute Task A, Centerplace City land use problem. The issue concerns possible uses of one square mile acres of county farmland, four miles northeast of the city. Questions and discussion I. Do not paraphrase unless the comment is too wordy; if so ask, "How shall I write that on the chart? Number the items as you go along to simplify identification later. Stop when you get 15 to 20 items. Stop when most items are designated with a letter, or group seems to run out of thoughts. Develop and give presentation. Divide the class or group into the number of categories decided on in 1-III. Limit each group to students. Assign each group to one of the use categories. Each group is to represent the special user group assigned. Distribute Task B and inform the students they have 10 minutes to list and analyze possible uses for the vacant land in the assigned category. They may consider those listed on the board in their category plus any other possible uses they can think of for the category. As an option, allow more time for this part of the activity such as time for research or drawings to make the presentations more realistic. At the end of 10 minutes, go on to the next step. Tell the group, "Now go on to Task C. You have 20 minutes to plan a strategy and develop a three minute presentation to be made to the County Board of Commissioners. Distribute Task C cards. Ten minutes into Task C, have each group select one of its members to meet together as the County Board of Commissioners. Take the board into another room and tell them they will be responsible for hearing the presentations and deciding upon the best one. Their job in the next 10 minutes is to: Develop the criteria to use in evaluating the proposals. Develop a matrix to record their evaluations while the presentations are being given. Elect a chairperson to preside during group presentations. Distribute the criteria guide. Twelve minutes after groups start planning Task C, remind them they have eight minutes left to have their verbal and visual presentations ready. Let groups have five more minutes to finish if needed. Have the Board of County Commissioners enter the room and sit up front. Appoint a timekeeper to limit all presentations to three minutes. The board may question the presenters after the initial three minutes. After completion of the presentations, the board may retire to choose best proposal. County Board announces their decision and gives reasons for this decision. County Board reads their criteria aloud. Examples may include topography, vegetation, economy, transportation.
