Founded in by James S. Coleman and Edward L. In the early years, CSOS focused largely on the effects of desegregation on schools, teachers, and students. The first Center report by James S. Coleman Race Relations and Social Change, Report 1, identified CSOS as a research center that would conduct rigorous research on issues that affect the quality of schools for all students. A few of the enduring innovations developed at the center include: Now, Success for All is one of the most studied and most implemented approaches for school improvement in the elementary grades. Presently, over 60 districts and more than schools in the U. TDS provides evidence-based components, tools, and services to the most challenged secondary schools serving the most vulnerable students in the country. Their development of early warning and intervention systems to identify and support middle and high school students at risk of dropping out is helping to increase the number of students who graduate from high school on time. The CSOS hallmark continues to be programmatic research, where one study raises new questions for the next. When many studies confirm effective structures and processes, the work moves on to the development and field testing of approaches that may be feasible for broad dissemination. CSOS faculty and staff have been building this bridge from research-to-policy-and-practice for 50 years and counting. The Early Learning program focuses on improving school readiness for preschoolers in Head Start programs. This team is studying how to close the vocabulary gap between groups of children by the time they enter kindergarten. These additions to CSOS all follow a programmatic path from research and development to dissemination for improving educational practice. Over 50 years, many researchers and staff contributed to CSOS programs and projects. We value every one. CSOS reports, publications, and products have influenced countless researchers, graduate students, policy leaders, and educators in this and other countries. To honor the history of the Center and to frame its future, we are celebrating CSOS at 50 with a series of monthly blog posts throughout this calendar year from the current CSOS faculty:

**Chapter 2 : Look Back to Get Ahead: Life Lessons from History's Heroes - Michael Anthony Jackson - Good**

*When it comes to the subject of healing, there is more than one way to [www.nxgvision.com](http://www.nxgvision.com) is the laying on of hands by a believer, the prayer of agreement by two or more, anointing with oil and the prayer of faith by an Elder as described in the Book of James.*

We always have our finger on the pulse and want you to be the first to know about the next big bakery trend before it goes mainstream. In our first blog post, we highlight the hottest bakery trends from and share our predictions for the year ahead! A Look Back From snacking to clean labels to healthy grains and pulse flours, was full of diverse and exciting opportunities that will continue to impact our industry for years to come. Here are a few of the highlights from As health and wellness becomes a priority for many Americans, the demand for transparency and healthy, better-for-you ingredients continues to grow. Grand View Research expects pulse flours to have a compound annual growth rate of Meanwhile, shops and restaurants featuring raw cookie dough and Instagram-worthy milkshakes drew huge crowds throughout A Look Forward Sustainability and functional ingredients will lead the way in the bakery and desserts trends this year. Meanwhile, the classic donut will get a modern, grown up makeover and chefs will experiment with nontraditional ingredients and savory flavor profiles. Sustainability From sourcing to packaging to processing, sustainability will have a huge impact on the bakery industry. A sustainable supply chain is now critical to the success of commercial bakeries. Manufacturers who work with suppliers to develop a more sustainable supply chain will be better equipped to cut costs, manage risk, generate new sources of revenue and boost the value of their brand. In addition to a more sustainable supply chain, recycled and eco-friendly packaging will be essential to attracting conscious consumers. Exotic, Functional Ingredients As the better-for-you ingredient trend continues to evolve, consumers will seek out functional ingredients that offer multiple health benefits such as anti-inflammatory and antioxidant properties. Functional mushrooms such as reishi and chaga will start popping up for their high fiber, immune boosting properties. Derived from an ancient form of intermediate wheatgrass, Kernza provides a similar nutritional profile to wheat and can be easily substituted for it in a wide variety of products. Powdered blue algae, aka Spirulina, will be used for both its nutritional and unique coloring properties. Extremely high in resistant starch and inherently gluten-free, green banana flour is expected to be big in Sweet Meets Savory Perhaps a result of the clean label trend, classic dessert recipes are being updated with nontraditional ingredients and in some cases are taking on savory flavor profiles in place of sweet. This year will showcase desserts made with less sugar, more spice, hearty grains and even naturally sweet vegetables, like beets. While seemed to be the year of better-for-you bakery ingredients and modern versions of classic recipes, appears to be taking those trends even further, with sustainability, functional ingredients and grown-up flavor and nutritional profiles taking center stage. As we watch these trends continue to evolve, it will be interesting to see how they impact the bakery and dessert industry. Let us know in the comments section below.

Get the most important digital marketing news each day. We respect your privacy. Look Back To Look Ahead: Columnist Melissa Feemster offers some takeaways from past holiday seasons, as well as some affiliate marketing tips to get you prepared. Melissa Feemster on October 2, at Key Trends From Holiday Timing Is Everything Looking at what occurred in is one of the easiest ways to anticipate holiday shopping trends. With that in mind, this year, we should expect peak shopping days to take place in the middle of the week. Last year, five of the top 12 online shopping days were Tuesdays or Wednesdays, a change from previous years, when traffic was heavily concentrated on Mondays. This indicates retailers have even more opportunities throughout the week to reach key consumers. That said, in Q4 , mobile devices represented 45 percent of the holiday season Web traffic, a 26 percent increase over the previous year. I predict that this holiday, mobile traffic to most retailers will top 60 percent of their share. Last year, tablets still led smartphones in terms of actual purchases made on the platform during the holiday season, but this year, mobile phones will outpace tablets in share of purchases. The demand for buy online, pick up in-store services is huge particularly for electronics, housewares and apparel , so retailers must look to provide this purchase option or risk getting left behind. This season, we can expect to see even more crossover. Brick-and-mortar stores need to mobilize their omni-channel strategies to perform at peak this season, especially with consumers expecting relevant discounts wherever they shop, wanting personalized experiences both across devices and in-store, and relying more on their mobile devices than they do on retail sales associates. Affiliate Marketing Tips For Holiday 1. Who were your top partners? What did your marketing calendar look like? Were there missed opportunities? Spend time to answer these questions. They will provide insight into where to promote offers. Leverage the data as a benchmark, and plan your placements on days with high traffic, as well as those with high sales. Reach out to new or top-performing partners now, and make sure your content is easy to promote and competitive compared with promotions earlier this year. Affiliates are already gathering Black Friday promotions, and real estate fills up rapidly, making it more difficult to acquire new partnerships or to optimize existing relationships as the year progresses. To maximize sales, provide publishers with accurate product information. Consider longer-term offers and increased commissions, particularly for loyalty sites that reward customers with cash-back incentives. Provide early notice of best-of-Web pricing, and allow publishers to opt-in early. Verticals like computers and electronics tend to experience the greatest increases in sales around this time, as consumers aggressively hunt for deals on expensive items like tablets, cameras, smartphones and other gadgets. Blog and content publishers have the ability to upload offers quickly and promote them multiple times across social networks. Develop strong and specific content for your blogger partners and inform them of upcoming events with timely communications. Affiliate Success Comes Down To Partnerships Holidays are stressful for everyone, and the heightened nerves of last-minute shoppers force purchases and shipping to fall on just a few days. To make it through, nurture partnerships now, so that you have strong relationships during hectic times. The importance of having everyone on the same page cannot be understated. In a relationship, this means wanting and expecting the same things. One idea is to gather your publishers together to deliver information about upcoming promotions by hosting a webinar. Always remember that affiliate marketing is a people-centric business. Building and maintaining strong relationships with affiliate partners is crucial to having a successful holiday season. Going the extra mile for your partners always pays off, and it can turn your Q4 into what truly is the most wonderful time of the year. And, with that, I wish you a prosperous holiday season ahead, filled with record-setting sales days. **Chapter 4 : GIVEAWAY: Look Back to Get Ahead | OnBalance**

*With the Dow Jones now trading around the 25, level, to equal the percentage drop experienced 31 years ago, on Black Monday, the market would have to fall nearly 5, points in a single session.*

The Dow Jones Industrial Average also has enjoyed a stellar quarter, up 9. Small-cap stocks, as well as mid-cap stocks, did well in Q3, although both segments lagged their larger-cap brethren. The broad gains in domestic equities during Q3 were largely driven by strong economic data, solid earnings growth and improved clarity on global trade. Perhaps not surprisingly, those positive factors often were overlooked, as news headlines focused on various political firestorms and the continued trade uncertainty between the United States and China. Yet, in what has become a recurring theme for the market, positive economic and corporate fundamentals once again outweighed the admittedly unnerving political headlines. To put that in its proper context, the last time the U. Prior to that, it was late ! Yes, concerns about the U. In July, the United States and the European Union reached a trade agreement that would prevent retaliatory tariffs and promised to investigate ways to further promote free trade. As mentioned, we started the third quarter with four areas of trade-related concerns, and now we have just one albeit the biggest area of concern – China. And while the U. As things stand right now, U. Will we see volatility in Q4? I think we can safely say that this quarter will be more volatile than Q3, simply because last quarter, stocks just kept pushing the gas pedal. Markets need to brake now and then, so look for some slowing over the next couple of months remember, September and October are traditionally down months for stocks. As for the big questions facing markets in the fourth quarter, they include: Can the United States and China strike a trade deal? Will corporate earnings growth continue to meet expectations? Will disruptive political events from Washington personnel turnover, midterm elections, the Mueller investigation put a fear bid in on stocks? Yet as has shown us so far, uncertainty is not, by itself, enough to offset strong fundamentals in the U. Also remember that markets always face uncertainties, especially at the start of a new quarter. Yet, over the long term, it is core economic and corporate fundamentals that drive market returns – and not the seemingly omnipresent waft of uncertainty generated by media headlines. If so, then I invite you to check out my Successful Investing advisory service, right now!

**Chapter 5 : What does God's Word say about "looking back to look ahead" ?**

*Leaders: Look Back to Get Ahead September 6, By Jennifer Ledet Leave a Comment For leaders in our 24/7 connected world, with over TV channels, social media, hour news, and a constant bombardment of information, it becomes very easy to take in scads of information, but never reflect on it.*

Look Back To Get Ahead! There is the laying on of hands by a believer, the prayer of agreement by two or more, anointing with oil and the prayer of faith by an Elder as described in the Book of James. There is the working of miracles and the gift of healing administered by a believer as the Spirit directs, just to name a few. Well, before you read any farther, I want you to put a smile on your face, get an open mind, and prepare your heart to receive from the Lord. He believed that Jesus could heal, but the man was not sure if Jesus was willing to heal him. The reply of Jesus, "I am willing," removed the doubt of the leper. Make no mistake about it, healing is the will of God! When she had heard of Jesus, came in the press behind, and touched his garment. For she said, If I may touch but his clothes, I shall be whole. And straightway the fountain of her blood was dried up; and she felt in her body that she was healed of that plague. She had endured pain and suffering for 12 years, sought every way possible to get relief, spent all of her savings and But someone told her about Jesus. Someone told her that Jesus was compassionate, that He was a miracle worker, that He could make the impossible possible. When she heard that report, faith began to rise up on the inside of her and she began to see herself healed, whole and made completely well by the Master. If I can just touch His clothes, I shall be made whole. It represents the finished work. Jesus is the living Word John 1: We need to see the promises in the Word of God as finished. Your healing is a finished work. Many needing healing will say, "Lord when are you going to heal me," or " I believe the Lord is going to heal me. The price has been paid for your right to be healed. The problem is, instead of putting our faith into a future work, we need to look back to the work of the cross and apply our faith to the finished work that the Blood of Jesus purchased for us at Calvary, thanking the Lord for what He has done and laying claim to it as ours. What we are really saying when we are looking to a future work is that we are counting on Jesus to come down again from heaven and die on the cross all over again for our present affliction. When we receive salvation, we do not say, "I believe the Lord will grant me salvation someday, I believe someday the Lord will allow me to become a Christian. We become a Christian by accepting the finished work of Calvary, by looking backwards to what has already been provided and not to some future work. I also, at one time, was looking to a future work of healing and the Lord revealed this precious truth to me. Resist discouragement and take a firm stand of faith, expecting the Lord to do what He has promised.

Comments Share The need for digital transformation has reached a new sense urgency for numerous industries, but never more so than the technology, media, and telecom sectors. Those that succeed in providing a seamless digital customer journey in an omnichannel environment will see significant returns for their investments. The challenges The problem is that successful digital transformation can be quite difficult to execute and is exacerbated by the increase in bundled offerings, disparate legacy systems and billing environments. At the same time, advances in technology are not slowing down. Distribution channels keep growing, face-to-face agents are now supported with hand-held or tablet-based guided workflows, while chatbots are incorporating artificial intelligence, and the smart speaker channel is next. Yet, resources that could be leveraged to create simple and intuitive digital experiences are instead being deployed to maintain and modify all of this plumbing. Learning by example Looking back years will help us understand how to solve this problem. When companies rushed to get onto the web years ago, website designers created an abundance of hypertext markup language HTML code. Content creation and management was extremely difficult because of the need to work within this code. When new content became available, all the code had to be updated through scheduled releases, which required a lot of coordination. Moreover, the cost of maintaining all that content prevented companies from delivering great designs. This is when the content management system CMS was born. CMS provided a graphical user interface GUI that allowed users to control the creation, modification and removal of digital content from websites without needing to know anything about HTML. It solved a big problem by simplifying content creation and management. The path forward As great an idea as it was, CMS did not go far enough. Truly great digital customer experiences cannot be created with content alone. Instead, great digital customer experiences need to be delivered in the context of a customer journey and at every touchpoint the customer has with your company. This includes not only content, but also actions and sequencing. Companies need to focus on what customers are thinking, doing and feeling because a customer journey is the full storyline, not just common subjects and objects. Looking forward, a firm's need a unified method of delivering true omnichannel customer experiences throughout the entire customer journey. It must be an easy-to-use, low-code platform that is supported by rich data abstraction and integration capabilities, and designed to create, modify and optimize customer journeys across all channels for any type of product or service. Only when channels are decoupled from backend integrations to enable business functions, flows and experiences to live within a customer journey, instead of being hard-coded in multiple channels, will providers will be free to focus on the experience, not the plumbing. We win and the customer wins.

**Chapter 7 : Look Back To Look Ahead: Tips For A Lucrative Holiday Shopping Season - Marketing Land**

*If a potential employer ran a background check on you, what would he or she discover? Sheila Grosdidier, BS, RVT, a partner and consultant with VMC Inc., says she recommends checking out your report before your future boss does. "Electronic background checks are becoming a lot more common, and it's.*

Therefore, we could have used this pattern to match the whole string instead of the dot-star. Generalizing this result, if you must check for n conditions, your pattern only needs to include n-1 lookaheads at the most. Often, you are even able to combine several conditions into a single lookahead. Indeed that was the case. But we could also have converted any of the other three lookaheads to match the entire string. For instance, taking the lookahead? The pattern would have become: In general, not so: After this, the string may have line breaks and many more line. In this particular pattern, the first lookaround? If one lookahead is more likely to fail than the other two, it makes little sense to place it in third position and expend a lot of energy checking the first two conditions. The resulting match would be the same, but it could take a lot more time. For instance, suppose the third lookahead whose job it is to assert that the string contains at least one digit fails. After failing to find a match at the first position in the string, the engine advances to the second position and tries the lookaheads again, one after the other. Once more, the third lookahead is bound to fail to find a digit. After each failure, the engine will start a new match attempt starting at the next position in the string. Even when the two first lookaheads succeed and they may fail, as the uppercase or lowercase letter they check for may have been the lone one in the string, and at a position already passed, the third lookahead will always fail to find a digit. As the password validation example made clear, lookarounds stand their ground. Therefore, do not expect the pattern A? Many beginners assume that the lookahead says that "there is a 5 somewhere to the right", but that is not so. After the engine matches the A, the lookahead? If you want to check if there is a 5 somewhere anywhere to the right, you can use? Many beginners assume that the second lookahead looks to the right of the first lookahead. It is not so. At the end of the first lookahead, the engine is still planted at the very same spot in the string, after the A. If you want to check that the 5 is followed by an uppercase letter, just state it in the first lookahead: They mean "look at the text immediately to the left or to the right". If you want to inspect a piece of string further down, you will need to insert "binoculars" inside the lookahead to get you to the part of the string you want to inspectâ€”for instance a. Validation The password validation section showed how the combination of several lookaheads can impose a number of conditions on the string to be matched, allowing us to validate it with a single pattern. There are several ways to do it without lookarounds: Not only is this solution easy to read, it is also easy to maintain if we ever decide to exclude the letter K instead of Q, or to exclude both: Using the same idea, if we wanted to match one character in the Arabic script as long as it is not a number, we could use this pattern: NET and Java, you would use?! For instance, to match one character in the Arabic script as long as it is a number, we transform the negative lookahead above to a positive lookahead. Needless to say, you can interchange the content of the lookahead with the token to be matched: Instead of removing characters from a class, it restricts the scope within which a token is allowed to match. Using a negative lookahead, we can use: This technique is called tempered greedy token on the Quantifiers page. This technique appears in the Explicit Greedy Alternation section of the Quantifiers page. Delimiter Do you have a string where you want to start matching all characters once the first instance of START is passed? No problem, just use a lookbehind to make a delimiter: Or would you like to match all characters in a string up to, but not including the characters END? Make a delimiter using a lookahead: To make it easier to read, you want to insert a space at each position between a lowercase letter and an uppercase letter. This regex matches these exact positions: How does it work? The lookbehind asserts that what immediately precedes the current position is a lowercase letter. And the lookahead asserts that what immediately follows the current position is an uppercase letter. Once again, the regex? In most languages, when you feed this regex to the function that uses a regex pattern to split strings, it returns an array of words. You can do it with this single regex: At the first position in the string before the A, the engine starts the first match attempt. The lookahead asserts that what immediately follows the current position is one or more word characters, and captures these characters to

Group 1. The lookahead succeeds, and so does the match attempt. It also returns what was captured by Group 1: ABCD The engine then moves to the next position in the string and starts the next match attempt. Again, the lookahead asserts that what immediately follows that position is word characters, and captures these characters to Group 1. The match succeeds, and Group 1 contains BCD. The engine moves to the next position in the string, and the process repeats itself for CD then D. NET, which has infinite lookbehind, you can find overlapping matches from the other side of the string. For instance, on the same string ABCD, consider this pattern: Usually, lookaheads, lookbehinds, anchors and boundaries appear in patterns that contain tokens that do match characters, allowing the engine to return a matched string. The resulting match is called a zero-width match because it contains no characters. This can be a useful technique, and we have already seen some applications of zero-width matches in the section on uses for lookarounds. To bring them together under one heading, here are some of their main uses. Validation If you string several lookarounds in a row, you can validate that a string conforms to a set of rules, as in the password validation technique. We saw that when you have n conditions, if you also want to match the string, you usually need n-1 lookarounds at the most as one condition can be removed and used in the matching section of the pattern. But if all you want to do is validate, all the conditions can stay inside lookarounds, giving you a zero-width match. Inserting You can use a zero-width match regex to match a position in a string and insert text at that position. For instance, by matching? Likewise, we saw how the zero-width pattern? Splitting We saw how the same zero-width pattern? Overlapping Matches We saw how an unanchored lookahead that contains capture groupsâ€”such as? Usually, one of the options is more efficient because it requires less work of the engine. To illustrate this, here are examples for each kind of lookahead. I borrowed them from the lookarounds section of the main syntax page, where they are discussed in greater detail. What may not be so clear is that each of these lookarounds can be used in two main ways: These two ways have a slightly different feel. When you compare each pair, the two methods have a different feel. The point of the examples is not to make you memorize "the right position", but to expose you to those two basic feels. With a bit of practice, the efficient way of positioning your lookarounds will probably come to you naturally. We have already seen three ways to do this: I call it the "back to the future lookbehind. We can position our back-to-the-future lookbehind before or after the digits. The lookbehind asserts that what immediately precedes the current position in the string is an underscore, then a position where the lookahead? This is interesting for several reasons. First, we have a lookahead within a lookbehind, and even though we were supposed to look backwards, this lookahead jumps over the current position by matching the two digits and the trailing underscore. Second, note that even though it looks complex, this is a fixed-width lookbehind the width is one character, the underscore , so it should work in all flavors of lookbehind. However, it does not work in Ruby as Ruby does not allow lookaheads and negative lookbehinds inside lookbehind. Another interesting feature is how the notion of "current position in the string" is not the same for the lookbehind and for the lookahead. Are we breaking that rule? The lookbehind makes an assertion about what can be matched at that position. But within the lookbehind itself, we enter a different little world. You can imagine that outside that world the engine is red, and inside the little world of the lookbehind, there is another little engine which is yellow. That yellow engine keeps track of its own position in the string. The yellow engine therefore starts its work before the leading underscore. It is that position that the lookahead refers to when it asserts that at the current position in the string according to the little world of the lookbehind and its yellow engine , what immediately follows is two digits and an underscore. After the digits Here is a second version where the "back-to-the-future lookbehind" comes after the digits: This too is a fixed-width lookbehind the width is three character, i.

## Chapter 8 : Moving Forward Quotes ( quotes)

*D. Gardner: So I need to go back to my email and get it. Let's go alphabetically. Let's go alphabetically. And yes, this is time to take notes because we don't have a graphic for this one.*

## Chapter 9 : Look Back, Look Around, Look Ahead

*Looking Back To Look Forward quotes - 1. I thank God for everything and everyone because no matter what the situation he was always there. I am done with the pain, sorrow and hatred.*
