Sky News - First for Breaking News, video, headlines, analysis and top stories from business, politics, entertainment and more in the UK and worldwide. 'I was lucky the monkeys behaved' Gemma.

The third member of Fluke, Tournier, was introduced to the group when he undertook work on a collaboration with Fugler entitled "Skin". The first of these, the industrial music single " All Aboard ", was released in under the name The Lucky Monkeys. This was an asset which, according to Fugler, proved invaluable in co-ordinating the "wider pool of people €" musicians and friends €" that we draw on to help". The album was removed from stores after the band denounced it, saying they had not given permission for the songs to be remixed. Six Wheels On My Wagon[edit] After a two-year break, Fluke returned with what became a breakthrough into mainstream popular music when, in , they released the single " Slid ". This became an instant club classic when it was picked up by DJ Sasha who liked it so much that he included three separate remixes of it on his Renaissance album. This new album was a distinctly house music production, with uplifting riffs and ambient effects, as opposed to the techno style of their previous release. The album was structured so that the more accessible "pop" tracks were to be found at the beginning of the album and the more ambitious ambient works towards the end. Though this could have produced a stagnating effect, it was received favourably by critics, with Billboard magazine labelling it "groundbreaking". Though born out of the groove, the pieces on Six Wheels On My Wagon have a melodic flow which manages to combine elements of surprise and innovation with a hedonistic serenity. This CD was a selection of tracks from two live sessions recorded on 18 November and 10 December Fluke were invited to perform two further, unreleased, Peel Sessions after this CD. One was broadcast on 10 November and the other was performed live on 8 December In terms of style, Oto was somewhat darker than Six Wheels on my Wagon, focusing on the downbeat ambient effects which were present in the second half of Six Wheels, and the band completely removed the uplifting house style that characterised their previous work. Owing to the decreased accessibility of the album as a result of this, only two singles were deemed suitable for release from Oto; " Bullet " and " Tosh ". In spite of this, "Bullet" was chosen by Dominic Pride of Billboard magazine as one of his top ten picks of The album was named Risotto after the risotto food dish because, like its culinary counterpart, it contained a mix of "ingredients". These included the pre-released singles "Atom Bomb" and "Absurd", new tracks "Goodnight Lover" and "Kitten Moon", the post-album single " Squirt " and reworked older tracks such as "Mosh", a remix of " Tosh " from Oto. Sometimes, on Absurd, Atom Bomb and especially the top-notch Squirt, it takes a terrier-like grip on your concentration, with the muted vocals hissing in your head like Martian broadcasts arriving through your fillings. Both releases were packaged with artwork from "Just Your Average Second On This Planet" , Discotheque by David Bethell The box-set contained black, red, white and blue versions of the same original cover art, and had a poster of the silhouette image on one side and all other album covers on the back. This included many of the tracks intended for the album Puppy , with only the track "Liquid" being excluded in the end. Speculation about a new album was furthered when, after a break of six years, the remaining members of Fluke released two singles forming the basis of this next album. In , Fluke finally demonstrated their ability to survive without Tournier when they released their fifth studio album, Puppy, six years after Risotto. The album was not received well critically with most of the critics labelling the album as dated. Andy Gill of The Independent wrote: With their endlessly cycling layers of fizzing synths and those big filter-sweeps that were de rigueur a few years back - when the music recedes to nothing, then surges back again - tracks such as "My Spine" and "Hang Tough" could have been made at any time in the past six or seven years. Maybe they were; whatever, they sound a tad cumbersome compared with the leaner garage beats favoured now. In "Snapshot", the juddering synth riff is the techno equivalent of the bar blues, a standard form that has become all too easy for lazy musicians to slip into. The track was used on the soundtrack for the Electronic Arts video game Need For Speed Underground 2 but achieved nowhere near the critical or popular acclaim of the singles from Risotto, not even appearing in the UK top This track retained the rough vocals and electronic feel that was by now characteristic of Fluke, but had a stronger emphasis on live playback and

real instruments. Mainstream popularity[edit] Although Fluke has been producing music for the better part of two decades they remain relatively unknown to a large scale audience and the band members themselves are even less recognisable. Among the more prominent of these appearances was the film, *The Matrix Reloaded* , using the Fluke track "Slap It" renamed to Zion for compatibility with the film. *Tomb Raider* soundtrack which tied in with a commercial deal for Ericsson who sponsored the film and then went on to use "Absurd" in its commercials. Unable to attract major crowds, Fluke resorted to "festival-style" tours along with other acts to draw in a sizeable audience, as was seen with their participation in the "Electric Highway" tour in where they were joined by The Crystal Method and the " Pukkelpop " festival where they headlined with Metallica amongst others.

Chapter 2 : Who Is Lucy the Australopithecus? 5 Facts You Need to Know | www.nxgvision.com

Lucky Monkeys in the Sky by Michele J. Gerald, June, iUniverse edition, Paperback in English.

Life timeline and Nature timeline French geologist and paleoanthropologist Maurice Taieb discovered the Hadar Formation for paleoanthropology in the Afar Triangle of Ethiopia; he recognized its potential as a likely repository of the fossils and artifacts of human origins. Taieb formed the International Afar Research Expedition IARE and invited three prominent international scientists to conduct research expeditions into the region. An expedition was soon mounted with four American and seven French participants; in the autumn of the team began surveying sites around Hadar for signs related to the origin of humans. The lower end of a femur was found near it, and when he fitted them together, the angle of the knee joint clearly showed that this fossil, reference AL, was an upright walking hominin. This fossil was later dated at more than three million years old—much older than other hominin fossils known at the time. The site lay about 2. Then, on the morning of 24 November, near the Awash River, Johanson abandoned a plan to update his field notes and joined graduate student Tom Gray to search Locality for bone fossils. On a hunch, Johanson decided to look at the bottom of a small gully that had been checked at least twice before by other workers. Near it lay a fragment from the back of a small skull. They noticed part of a femur thigh bone a few feet about one meter away. As they explored further, they found more and more bones on the slope, including vertebrae, part of a pelvis, ribs, and pieces of jaw. They marked the spot and returned to camp, excited at finding so many pieces apparently from one individual hominin. Johanson assessed it as female based on the one complete pelvic bone and sacrum, which indicated the width of the pelvic opening. Lucy the pre-human hominid and fossil hominin, captured much public notice; she became almost a household name at the time. Some nine years later, and now assembled altogether, she was returned to Ethiopia. An even more complete skeleton of a related hominid, Ardipithecus, was found in the same Awash Valley in Excavation, preservation, and analysis of the specimen Ardi was very difficult and time-consuming; work was begun in, with the results not fully published until October. These efforts were hindered by several factors: The Lucy skeleton occurs in the part of the Hadar sequence that accumulated with the fastest rate of deposition, which partly accounts for her excellent preservation. Fieldwork at Hadar was suspended in the winter of. When it was resumed thirteen years later in, the more precise argon-argon technology had been updated by Derek York at the University of Toronto. By Aronson and Robert Walter had found two suitable samples of volcanic ash—the older layer of ash was about 18 m below the fossil and the younger layer was only one meter below, closely marking the age of deposition of the specimen. These samples were argon-argon dated by Walter in the geochronology laboratory of the Institute of Human Origins at 3. Please help improve this article by adding citations to reliable sources.
