

Chapter 1 : How to Convert a Movie Maker File | It Still Works

In the case that your MAKER file doesn't open, it is highly likely that you do not have the correct software application installed on your PC to view or edit MAKER file extensions. If your PC opens the MAKER file, but it's the wrong application, you'll need to change your Windows registry file association settings.

Windows Vista[edit] The next version of Movie Maker was released as part of Windows Vista and " like most Windows components " reported version number 6. It included new effects and transitions, support for playback on the Xbox , [5] and support for the DVR-MS file format that Windows Media Centre records television in. However, the Windows Vista version of Windows Movie Maker removed support for importing video from an analog video source such as an analog camcorder , VCR or from a webcam. This version included the old effects and transitions, and is basically the same as Windows Movie Maker 2. Installation requires Windows Vista and is only intended for use on computers where the hardware accelerated version cannot be run. Windows Live[edit] A new version of the software, renamed Windows Live Movie Maker , was released as a beta on September 17, , and officially released as a standalone product through Windows Live Essentials suite on August 19, This was effectively a completely new software, as it could not read projects created by earlier versions and did not support custom XML transitions written for the previous versions. In addition, a great many features were removed. As the previous version of Windows Movie Maker was no longer included with the operating system, the only way to obtain Movie Maker on Windows 7 and later was through the Windows Live Essentials suite, [4] [11] although some manufacturers pre-installed the application on new PCs. An updated version, Windows Live Movie Maker , was released on August 17, , adding features such as webcam capture, support for high-definition video, the ability to upload videos directly to SkyDrive and Facebook , and the ability to add media files stored on network shares to projects. Support for recording voice-overs was restored, along with an audio mixer and integration with several free stock music services. When in Storyboard view, the video project appears as a film strip showing each scene in clips. In each bar, clips can be added for editing e. Still images can also be imported into the timeline and "stretched" to any desired number of frames. The accepted formats for import are. This feature is based on Windows Image Acquisition. Video support in Windows Image Acquisition was removed in Windows Vista, as a result importing analog footage in Windows Movie Maker is no longer possible. That is, at each point where the "Record" button was pressed, a new "clip" is generated, although the actual recording on the hard drive is still one continuous file. This feature is also offered after importing files already on the hard drive. In the Windows Vista version, the "Make clips on completion" option has been removed " the clips are now automatically created during the capture process. The efficiency of the importing and editing process is heavily dependent on the amount of file fragmentation of the hard disk. Fragmented AVI files result in jerky playback on the editing screen, and make the final rendering process much longer. Although it is possible to import digital video from cameras through the USB interface, most older cameras only support USB version 1 and the results tend to be poor " "sub VHS " " quality. Newer cameras using USB 2. Alternatively, most DV cameras allow the final AVI file to be recorded back onto the camera tape for high quality playback. Editing and output[edit] After capture, any clip can be dragged and dropped anywhere on the timeline. Once on the timeline, clips can be duplicated, split, repositioned or edited. An AutoMovie feature offers predefined editing styles titles, effects and transitions for quickly creating movies. The original camera file on the hard drive is not modified; the project file is just a list of instructions for reproducing a final output video file from the original file. Thus, several different versions of the same video can be simultaneously made from the original camera footage. Windows Movie Maker introduced the default ability to export in H. Video can be exported back to the video camera if supported by the camera. Movie Maker also allows users to publish a finished video on video hosting websites. Windows Movie Maker can also be used to edit and publish audio tracks. If no video or image is present, Movie Maker allows exporting the sound clips in Windows Media Audio format. Effects and transitions[edit] Windows Movie Maker supports a large variety of titles, effects and transitions. Titles are animated text screens, normally placed at the beginning or end of the movie, but can

also be placed over video clips. Titles and credits can be added as stand alone titles or overlaying them on the clip by adding them onto the selected clip. Titles range from static non-animated titles to fly in, fading, news banner, or spinning newspaper animations. They can also be placed on video clips to create sub-titles. Transitions affect how one video clips flows into another. Examples include fade and dissolve, but many more spectacular transitions are available. Effects alter how a video clip appears. There are in all 49 effects and 63 transitions. They are applied by using a drag and drop interface from the effects or transitions folders. Early versions V2 onwards of Windows Movie Maker had a flexible interface so programming custom effects and other content were possible via XML. The Windows Vista version supports Direct3D -based effects. Microsoft also provides SDK documentation for custom effects and transitions. Many custom transitions were commercially available and created additional features such as picture-in-picture. Windows Movie Maker V6 did not support customisations to effects and transitions in the same way as V2. Versions after V6 do not support custom transitions and effects at all. Reception and criticism[edit] Movie Maker 1. Some of those features such as visualisation of the audio levels have subsequently been re-added. In June , a memo purportedly by Bill Gates from January was circulated on the Internet in which he heavily criticized the downloading process for Movie Maker at the time.

Chapter 2 : FileMaker - Wikipedia

Fortune Global Companies use the FileMaker Platform. Businesses of all types use the FileMaker Platform because it's the easiest and most affordable way to create a custom app that solves your everyday challenges.

Some PDFMaker features are not available in certain versions of the authoring applications. Using PDFMaker within an authoring application is a simple, one-click procedure. It is not necessary to open Acrobat. Although many of the conversion options are common to all authoring applications, a few are application-specific. For Office , follow these steps: Office applications Click the File tab, and then click Option. Click Add-Ins on the left side of the dialog box. Do one of the following: Restart the Office application. Convert a file to PDF Open the file in the application used to create it. Enter a filename and location for the PDF, and click Save. Create a PDF as an email attachment Open the file in the application used to create it. When the conversion has finished, a blank message with the new PDF included as an attachment automatically opens in your default email application. You can then address and complete the message and either send it or save it as a draft. Select a file to attach, and click Open. Click Browse, select a file to convert, and click Open. To specify only users that are specified by a security policy, select Restrict Access By Applying The Following Security Policy, and then select a security policy in the list. In this case, the PDF is secured before it is attached to the email message. Create a PDF and send it for review Open the file in the application used to create it. When the Identity Setup dialog box appears, enter the appropriate information about yourself, and click Complete. Follow the directions in the wizard that appears, as described in Start an email-based review. Create a PDF and run an action Open the file in the application used to create it. Click an action to from the button menu, and follow the onscreen prompts to save the files. The PDF opens in Acrobat. Click Start in the right-hand pane to process the file. Optional To revert to the original default settings, click Restore Defaults on the Settings tab. When you choose an item in the menu, a description of that preset appears immediately below it. Deselect this option to save the file in the same folder as the source file, using the same name but with a. Convert Document Information Adds document information from the Properties dialog box of the source file. This setting overrides the printer preferences and settings in the Advanced panel of the Adobe PDF Settings dialog box. Change Permissions Password Specifies a password you set that users must use in order to do any allowable printing or editing. Printing Allowed Specifies whether users who use the Permissions Password can print the document and at what resolution. Changes Allowed Specifies what changes users who use the Permissions Password can make. Enable Plaintext Metadata Specifies whether the search engine can read the document metadata. Available only when the PDF-compatibility is set to Acrobat 6. You can also select a range of content in the file to convert. The conversion options that you can set in the following steps are some of the most commonly used settings from the Acrobat PDFMaker dialog box. Any changes you make to the conversion options apply to the current conversion only. The files are converted to FLV format files. Optionally, select the cells to convert. Office From the Acrobat ribbon, select one of the Create options. Optionally, click the Options button to change the conversion settings. Click Save to create the PDF. Optionally, select objects and text Word or slides PowerPoint , as needed. The Selection option is available only if you have selected content in the file. In the Insert Flash dialog box, choose a multimedia file from the menu, or click Browse to locate and select the file. Choose a media player skin from the menu. Acrobat converts the file to FLV format and inserts it into the document. The controls that activate an email conversion to PDF appear in two places within the email application: The PDFMaker conversion settings do not affect this process. Clicking this button opens a series of dialog boxes for selecting and saving the new PDF and also starts Acrobat, if it is not already running. The resulting PDF is attached to the open email message. Do not type a new name for the PDF. If you do, a warning message appears telling you that the PDF was not found. Click No to cancel the process. For PDF Portfolios of email converted or migrated in Acrobat 8 or later, only new messagesâ€”that is, messages that are not already part of the PDF Portfolioâ€”are appended. It is not necessary to select the folders at the beginning of the process because you can select them in a dialog box that appears automatically. When the conversion is complete, the new PDF opens in Acrobat. Set up automatic

email archiving Do one of the following: Then select options for Frequency and the time of day at which automatic archiving occurs. Select other options, according to your needs: Maintain Log Of Archival Creates a record of each archiving session. Choose File Specifies the name and location of the archiving log. Embed Index For Faster Search Creates an index that you can search to find specific words or characters instead of having to search each individual document. Click Add, and select the email folders and subfolders. Review the settings and the archive folder names listed in the Acrobat PDFMaker dialog box, and do any of the following: To add other email folders to the list, click Add and select the folder. To remove folders from the list, select the folders and click Delete. To change an archive file, select any folder name from the list, click Change Archive File, and specify the name and location. To start archiving email immediately, click Run Archival Now.

Create PDFs from Word mail merges Mail merges from Word generate documents like form lettersâ€”for one common exampleâ€”that are personalized with information like the names and addresses of the recipients. In Microsoft Word, open the template that you have created as the basis of your mail merge, or create the file using the Word Mail Merge toolbar and Mail Merge wizard, as needed. Do not complete the mail merge in Word. Instead, set up and preview the mail merge as usual, so that you can verify that the merge will work correctly. To specify which records in the data file will be imported into the merged files, select All or Current, or enter a range of pages by typing in the From and To boxes. The PDF will be named using this text plus a series of numbers. To create and save merged PDFs for printing or sending later in email, leave the option deselected, and click OK. To create merged PDFs and attach each one to an email message to the appropriate recipient, select this check box, and fill in the other Email options. When the Browse For Folder dialog box appears, navigate to the location you want to use and click OK. Enter the appropriate information and click OK. When the job has finished, a message appears, telling you that the process was successful.

Subject Line Type the text that you want to appear in the subject line of each message. Message Type to add or edit text that you want to appear in the body of the email messages. You can create PDFs of only the current selected view. Views designated as non-printable in Project cannot be converted to PDF. Convert Visio files to PDF Acrobat Pro PDFs created from Visio files preserve page sizes and support layers, searchable text, custom properties, links, bookmarks, and comments, depending on the conversion settings. Shapes are converted regardless of their protection or behavior. Shape custom properties can be converted to PDF object data. When you convert the Visio file to a PDF, you can preserve all or just some layers, or you can flatten all layers. When flattened, the contents of only visible and printable layers will appear in the converted PDF. For information about a setting, place the pointer over the setting to display a tool tip below. If this option is deselected, only the current page is converted. The PDF file attaches to a new email message in your default email application. The file converts to an Adobe PDF file, and an email-based review process begins. If you want to include the custom properties of shapes, select that option. Select a layers option to retain or flatten layers in the resulting PDF, and click Continue. Select Visio layers to convert Acrobat Pro.

Chapter 3 : editing a movie maker file - Microsoft Community

Once you have finished editing a movie file in Windows Movie Maker and are satisfied with the results, you will want to convert the file to a format viewable on any media playback device. In the case of Windows Movie Maker, this means converting the Movie Maker data to the WMV format, or Windows.

Denotes the content block. Only ContentFile elements are allowed inside. A file in the content block is treated exactly the same as if it were added through the Add Items dialog box. Video files are added to the main list, still images are added to a slide show folder, and audio is added to the slide show. Title The title of the disc. Drive The drive letter of the DVD burner to use. Style The name of the style to use. If blank, the default style is used. Font The name and color of the font, and whether it is bold or italic. For the color value, the first two characters must be "FF", and the values for the red, green, and blue components are defined by two character hexadecimal values. Button The names of the buttons used on the main DVD menu. Notes The text that shows up on the notes page. The maximum number of characters supported is InsetVideo The setting of the Foreground video combo box on the Customize page. BackgroundVideo The setting of the Background video combo box on the Customize page. MenuAudio The setting of the Menu audio combo box on the Customize page. SceneButtonName The name of the scene button style set on the Customize page. SlideShow Attributes for slide show settings. Transition sets the name of the transition to use, Length is the amount of time each slide will be on the screen, and PanZoom and MatchMusic are used to set the following settings: Use pan and zoom effects for pictures Change slide show length to match music length See Also.

Chapter 4 : Windows Movie Maker Supported File Formats

Official file download for Windows Movie Maker , compatible with Windows Our site hosts the official genuine version of Windows Movie Maker that was originally published by Microsoft, available for download via an archived copy.

In the Registry Editor, go to the following location: OfficeAddin" Right-click Loadbehavior and choose Modify. Close the Registry Editor and restart the Office application. OfficeAddin" and set its value to "1". Manually register the COM add-in file Caution: This procedure involves editing the Windows registry. Make sure to back up the registry before editing it. For more information about the registry, see the Windows documentation or contact Microsoft. Click here to see the steps for manually registering the COM add-in file Close all Office applications. Its default path is: Search for Command Prompt using the search button next to the Start button. In the Command Prompt window, type regsvr32 followed by a space and the path that you noted in Step 1. Enclose the path in quotation marks. A dialog box confirms that the registration was successful. Click OK to close this dialog box. Close the Command Prompt window. Open the Office application. Click the blue File menu in the upper-left corner. Click the [Application Name] Options button. Choose Add-ins in the list on the left side of the Options window. Then close and reopen the Office application. Click Remove, and proceed to the next paragraph. If you installed Acrobat to a location other than the default of C: Run Repair Acrobat Installation while no other applications are running Click here to see the steps for repairing Acrobat installation Close all open applications.

Chapter 5 : How to Burn a DVD From Windows Movie Maker | www.nxgvision.com

Step. Open the project you wish to burn to DVD in Windows Movie Maker by clicking "File," selecting "Open Project" and then using the Open Project dialog box to navigate to your files and folders.

This compiles the two. Unfortunately, this approach to compilation has two downfalls. First, if you lose the compile command or switch computers you have to retype it from scratch, which is inefficient at best. Second, if you are only making changes to one. The simplest makefile you could create would look something like: If you put this rule into a file called Makefile or makefile and then type make on the command line it will execute the compile command as you have written it in the makefile. Note that make with no arguments executes the first rule in the file. Furthermore, by putting the list of files on which the command depends on the first line after the: Immediately, you have solved problem 1 and can avoid using the up arrow repeatedly, looking for your last compile command. However, the system is still not being efficient in terms of compiling only the latest changes. One very important thing to note is that there is a tab before the gcc command in the makefile. It turns out these are special constants that communicate to make how we want to compile the files hellomake. By putting the object files--hellomake. Using this form of makefile is sufficient for most small scale projects. However, there is one thing missing: If you were to make a change to hellomake. In order to fix this, we need to tell make that all. We can do this by writing a simple rule and adding it to the makefile. Then we define a rule that applies to all files ending in the. The rule says that the. The rule then says that to generate the. In the example below, all of the include files should be listed as part of the macro DEPS, and all of the object files should be listed as part of the macro OBJ. Also, can we somehow hide those annoying. The answer, of course, is yes. The following makefile defines paths to the include and lib directories, and places the object files in an obj subdirectory within the src directory. It also has a macro defined for any libraries you want to include, such as the math library -lm. This makefile should be located in the src directory. Note that it also includes a rule for cleaning up your source and object directories if you type make clean. PHONY rule keeps make from doing something with a file named clean. You can add multiple rules to a makefile; you can even create rules that call other rules. For more information on makefiles and the make function, check out the GNU Make Manual , which will tell you more than you ever wanted to know really.

Chapter 6 : A Simple Makefile Tutorial

Windows Live Movie Maker is designed for the budding videographer. Your very own movie studio at the tip of your fingers. Quickly import your footage from your computer or camera directly into Movie Maker and then easily edit, fine tune and personalize your movie just the way you want with.

Chapter 7 : RPG Maker File Extensions - www.nxgvision.com

To exclude a file from the conversion, deselect the file box. As needed, select or deselect all of the files in the list, change the order of the files, remove files, or clear the list. To show the complete file paths, select Expand File Name(s).

Chapter 8 : Free SVG Cut Files: Where to Find the Best Designs - Jennifer Maker

Windows Movie Maker, part of Windows Essentials , is no longer available for download. Websites that offer free downloads of Movie Maker are not offering the real thing, and those downloads may contain malware, viruses, or hidden costs.

Chapter 9 : How to Open MAKER Files - File Extension MAKER

FileMaker Pro is a cross-platform relational database application from FileMaker Inc., a subsidiary of Apple Inc. It
