Steps to merge partitions under Windows 7 with EaseUS Partition Master Windows 7 built-in Disk Managemen tool requires you to delete the partition when you merge partitions with it. So, this method is not recommended because it will lead to data loss disaster.

Another reason why some people want to merge partitions in Windows 7 is because C drive getting full. By merging drive D to C, there will be more free space in C drive again. If you want to combine two data volumes, either Windows 7 native Disk Management or 3rd-party partitioning software can help you. But if you want to combine C and D drive , it is not a good idea. For example if you want to merge drive D and E, follow the steps: Back up or transfer all files in drive E to other place. Press on keyboard to open Run, type diskmgmt. Right click drive E and select Delete Volume. Right click drive D and select Extend Volume, simply click Next to finish. However, there is a restriction that cause you cannot merge partitions with Extend Volume. Free space deleted from Logical partition cannot be merged into Primary partition, Unallocated space deleted from Primary partition cannot be combined to Logical partition. In addition, you can combine partitions on Windows 7 by only several clicks. In the pop-up window, click the check-box of both drive D and E, and then click the drop-down box to select destination drive. If you select drive D in the drop-down box, drive E will be merged into D. All files in original drive E are moved to this folder automatically. Merge partition C and D If you want to combine drive C and D, the steps are the same with above except one selection. When merging 2 drives, all files of a drive will be moved to the other one, but this drive will be deleted. C drive is where Operating System located, of course it cannot be deleted, so when merging drive C and D, D is disabled as destination. Resize partition instead of merging Different with other data volumes, programs are installed in drive D, so it is not a good idea to extend C drive by merging D. Though all files will be transferred to C, all shortcuts of these program become invalid. Watch the video how to do this: How to merge partitions in windows 7 without data loss?

Using Windows 7 computer. Windows Live Mail is being used as a program to send the emails out. Microsoft Excell is used to supply the email addresses. It is not an address book problem. How do I fix my problem? I am using Microsoft Word to open a short document. I am using a Microsoft Excell spreadsheet. I can see the document. I can see where the merged names will be inserted. I can preview individual letters to see the names inserted correctly. I can also manage the contacts - and select which emails the Mail Merge should be sent to. As a test, I select only my name. I send out the Mail Merge to the emails as all 3 format options with the subject of "test". You must log onto Microsoft Exchange to access your address book. Microsoft Exchange is not installed on this computer, nor was it used in any way. Similarly the address book should be the Excell Document. HTTP is the preferred way of sending out this message. Install email program or create an association in default programs in the Control Panel. WLM is installed, and has been associated with. I have looked up as much as I could on the error messages. The fixes all relate to 1 Installing Outlook last ditch option - I would much prefer to get this functioning through Windows Live Mail. Not relevant here, as the addresses are already saved in the spreadsheet. I merely want to be able to send them out. Thanks in advance for any help!

User Comments Kindly Remind: With more and more data stored to C drive of Windows 7, now this partition is nearly out of space. However, there are lots of free space on D drive, so I want to know whether it is possible to merge C with D so as to enlarge system partition of Windows 7. One is to use Windows built-in disk management tool, and the other is to ask third-party partition manager for help. Next, we will introduce these 2 methods in detail, and users can choose the most appropriate one in accordance with actual demands. Naturally, all data saved in this drive will be lost. Do you want to backup data in a fast way? View the help tutorial Copy Partition to get instructions. Right-click "Computer" icon on the desktop, choose "Manage" and click "Disk Management" to get its main interface as follows. Right-click partition D and then choose "Delete Volume" button to release unallocated space. Right-click partition C and then choose "Extend Volume" button. Then, extend volume C by following Extend Volume Wizard. Possible reasons for Extend Volume Grayed out are shown here, and users will be given corresponding solutions at the same time. From the demonstration above we know though Windows disk management tool can help us merge partitions, it will lead to data loss. So well, is it possible to merge partitions without losing any data? Of course there is, and it is to make use of third party partition manager. Users need to launch MiniTool Partition Wizard to get its main interface as follows. Select C drive and then choose "Merge Partition" from the left action panel to enter its operating interface. Actually, apart from merging C and D, users have another choice: Just select drive C, choose Extend Partition feature, take free space from D to enlarge C, and apply changes. The method is much simpler. Of course, you are able to change the folder name here. Click "Apply" to perform all changes. After all operations are done, users have finished merging C and D drive in Windows 7 by using MiniTool Partition Wizard, and no data loss is generated. Tweet Your New Skill Summary Comparing these 2 methods, we can find resorting to third party partition manager is much better since it can help combine partitions without data loss. But for successful merge, please pay attention to the following 2 issues: Drive C and Drive D should be adjacent. Both partitions should be formatted with NTFS.
