

Chapter 1 : Nissan Diesel Engine SD22 SD23 SD25 SD33 SD33T Service Manual

Nissan TD Diesel Engine Factory Workshop Service Repair Manual TD23 TD25 TD27 TD27T This PDF service manual will show you every nut and bolt on your vehicle. With hundreds of pages, it will show you how to distinguish any problem (from an oil change to a transmission swap) and how to fix it on your own.

In addition, from to a covered utility body style like that of the first generation 4Runner was available as an aftermarket conversion by a company called Matrix3 called the Bushmaster. The Datsun was available in both 2WD and 4WD configurations, the latter having a divorced transfer case. The long wheelbase 2WD trucks King Cab, short bed, and regular cab, long bed had a two-piece driveshaft with a center support bearing. The was assembled in the newly built Smyrna, Tennessee plant from the However, Nissan of Mexico continued to build the pickup until , being its last official model year. They were exported to the whole of Latin America. It was a bare bone truck that featured a shorter bed when compared to the regular cab. Unlike the others it had only a driver side mirror, single walled bed, vinyl bench seat, and other bare bone accommodations. What really set this model apart was its drive train. It featured the 2. Its compression ratio was at a high 9. It was able to do this because it featured a knock sensor that would advance the timing by about 10 degrees to prevent the engine from knocking. This resulted in excellent fuel economy but at the cost of emissions. For that reason this truck was not sold in the California market. GL[edit] The standard GL single cab Datsun came with a front bench seat made of single color non-patterned cloth and leather in blue, black, or tan to match the interior trim color of the vehicle. It had optional factory air-conditioning and contained a simple gauge cluster with speedometer, fuel, and water temperature gauges with blank faces in place of the tachometer and clock , as well as sliding glass rear window. A radio and cruise control were options installed by the dealership. These vehicles came in long bed, short bed, or cab-and-chassis styles with the later having a "heavy duty" option of dual rear wheels. DX[edit] The 2WD deluxe model came with front bench seats of varying patterns to match the door trim and interior in blue, black or tan. Both drivetrain options had single and King-Cab variants. Beds both long and short were available. In addition, there were roll-bar and bumper-brush guard options for the 4WD variant that were installed by the dealership with mounting points for off-road and fog lights. Switches for these were placed in the center console below to pre XE[edit] The 2WD Luxury model came only in king cab variants and featured several standard and unique features. For the exterior, it came with a two tone paint job, chrome bumpers, mirrors and grille. It also had Nissan brand hexagonal hubcaps, whitewall tires, and sun roof. For the interior, this top of the line model came with full carpeting, bucket seats, tachometer, quartz clock, intermittent wipers, center console, and woodgrain accents on the dash and door. Like the other trucks, it was powered by the Z24 and offered both a 5-speed manual or 3-speed automatic. ST[edit] The 2WD and 4WD sport truck package came with factory air-conditioning as well as the clock and tachometer in the cluster as standard with exclusive gradient-patterned bucket seats for both drivetrains with the 4WD versions offering the center console and gauges of the DX model, and the 2WD having center console storage in place of the transfer case lever , as well as King-Cab variants. The sport truck package also was the only package with standard power windows and locks all other packages only received manual locks and windows , as well as a tilting sunroof. ST stickers were placed on the end of the rear quarter panels. Ironically, the ST package had no performance modifications, however in the model year it had an optional Z24i single-port fuel injected engine. Bushmaster[edit] From to a covered utility body style was available in the US called the Bushmaster. It was created from a King-Cab 4WD , welding the cab and bed of the truck together along with a custom bed topper which increased the height of the whole vehicle. The interior was completely carpeted, and incorporated a rear folding bench seat similar to the first generation Toyota 4Runner. This option is exceedingly rare, and is considered a predecessor to the Pathfinder. They had single wall beds with outside rolled lips and rope ties, two faux hood vents some had real vents , and tail lights on the lower rear valance similar to the Late Models[edit] In , the front end underwent transformation with a larger grille, bumper, and corner lights. There was also a revised dashboard with round instead of square gauges. At the same time, the regular cab was lengthened slightly and the air extractor vents behind the cab

doors changed from the high "flag" look to long, narrow ones that matched the height of the window opening. The cabs of the King Cab versions were unchanged. These "in-between" models were a combination of Datsun and Nissan badging, with Nissan replacing Datsun in similar fashion to the earlier models, but incorporated a "Datsun by Nissan" plastic trim piece on the front fenders, and "Datsun by Nissan" stickers on the tailgate. The late model trucks produced from Outside North America[edit] A four-door crew cab version of the was sold outside North America with the same trim options. In addition, some overseas models continued with the early style beds in the later model years as well as round headlamps, and included various combinations of Datsun and Nissan badging while retaining the Datsun name throughout all model years. Front view of four-door Datsun Side view of four-door Datsun The " " models used the Z22 carbureted 2. In mid, Nissan introduced the Z24 2. In the American market, the diesel engine was only available in the 2WD from to , while overseas markets had a 4WD diesel option. The Z24 was upgraded to Z24i single-point fuel-injection for some ST models. The rest of the world had versions with the smaller 1. The United Kingdom only received the longer wheelbase, as a standard bed 1-tonner with the L18 engine or as the four-wheel drive 2.
