

## Chapter 1 : Dozens arrested with Operation Pandora's Box | News | Hillsborough County News

*May 14, 2015 - The widening scandal at the Los Angeles County Sheriff's Department has at its center a top-secret operation that federal prosecutors said amounted to an.*

Despite a grand jury convened to investigate the matter, and a lengthy and ongoing probe by the FBI, Baca and his spokespeople still maintain that the informant was hidden for his own safety. This is the inside story of that operation. As it turned out, however, in addition to being a jail inmate, Brown was something else: Phones are, of course, strictly forbidden inside the jail. Concerned that Brown was using the phone for illegal activities, the jail investigators examined his call and text log, and found that, indeed, there were a few phone numbers that Brown dialed repeatedly. When investigators ran those numbers, the information they got back was not what they expected. They busied themselves looking anywhere but at each other. Tanaka, a highly intelligent, but physically small man, was infamous for these outsized eruptions of fury, which were reportedly frequent enough that the 4th floor workers who could not help but overhear them had developed intricate coping mechanisms, which mostly consisted of careful disinterest, lest the anger be suddenly turned their direction. His fury was formidable. It was only later, that they were able to piece together the fact that this was the moment when the then assistant sheriff first learned about Brown, the cell phone, and the FBI connection. According to sources, Sheriff Lee Baca was not seen on the 4th floor that day. The assumption was that he was out of town. It could have been Paul Tanaka. It could have been Sheriff Baca. Most sources believe it was some version of the latter. The two ICIB guys rolled up to Engels house and attempted to question the federal agent, threatening to arrest her, saying they could play hard ball and get a warrant if they wished to, or words to that affect. In truth, of course, the ICIB sergeants had no way of arresting Engels, as she had done nothing illegal. The purpose of the visit appeared to be mostly an attempt to bully and intimidate the federal agent, and perhaps to get some information out of her. According to sources, the ICIB agents later played the recording for Sheriff Baca as part of a briefing on the matter. Both Smith and Sexton were members of Operation Safe Jails, or OSJ, a specialized investigative unit that, as its name suggests, does its intelligence gathering inside the LA County Jail system, making use of jail informants to uncover illegal activities both in the jails and on the streets. OSJ also tracks, to what degree they are able, the moods and movements of the prison gangs that have a strong and often corrosive presence in the jails. Thompson, who explained that there was an inmate that OSJ needed to hide. Manzo was another deputy whom Thompson frequently relied on for tasks, and Sexton was the computer whiz of OSJ, hence his inclusion. Another computer savvy deputy, Jason Pearson, would be added later. At the ad hoc meeting, Thompson outlined a highly unusual situation in which they must hide an inmate inside the jail system, but they must hide him so completely that no one outside of a special few would have any way of detecting his presence, either physically or digitally. Paradoxically, the inmate, who was, of course, federal informant Anthony Brown, must not merely be rendered invisible, he must, at the same time, be accessible to special few. To accomplish this dual purpose, meant some unorthodox actions. The operation also required a trustworthy team. Normally if an OSJ operation required a meeting, it would have been held inside the jail. But Thompson and some of the other jail administrators had been jittery for a while about the possibility of bugs or listening devices planted inside the jail itself by federal agents. OSJ deputies generally consider themselves to be an elite squad. While they waited for their boss to show up, they talked about what they knew. Greg Thompson, who was typically a casually attired guy, arrived in a suit and tie, having just come from a meeting with the brass at the SHB department headquarters. Since this was a Need to Know operation, Thompson told the deputies only the basics, much of which they already knew via the deputy grapevine. An inmate had been caught with a contraband cell phone, that he was being worked as an informant by the feds, and that he needed to be hidden at the orders of Assistant Sheriff Paul Tanaka. In order to accomplish this task, a two-deputy detail would be on Brown at all times, stationed outside his cell. The idea was to make certain that no one without clearance could talk to the inmate, or even know he was anywhere in the LASD system. This is coming directly from Paul Tanaka, Thompson reportedly repeated in case anybody missed the point. It was also coming from Baca, according to Mickey Manzo who confided to

several of his fellow deputies that he had been present at SHB when Thompson briefed the sheriff on the whole matter. Manzo even described how at several points Baca unhappily put his head in his large hands at what he was hearing. The implication was that, once it became known that Brown was an informant, he was fearful that he would be retaliated against, or even killed, by jail deputies who saw him as a dangerous snitch. We were told explicitly that we were hiding him from the FBI. We were also told that the direction had come straight from the top. I mean, he killed one of our own, and we manage to keep him safe. So to say we went through this huge routine to keep Anthony Brown safe from department deputies? That is seriously laughable! We did it to keep him away from the feds. Thus if one needed to hide someone, that meant one needed to hide him or her from AJIS in such a way that would leave no embarrassing breadcrumbs or digital oddities that might prove troublesome in the event of a future investigation. Tricking AJIS, however, required a bit of doing. For one thing, when the team began the operation, according to AJIS, Anthony Brown was ready to be shipped out to state prison—which obviously the department had no intention of doing, since the whole point of this operation was to buy time so that LASD investigators could find out what exactly Brown knew. Then 48 hours later, the team did it all over again. This was not exactly a slam-dunk. Some of the non-team members balked when asked to perform the highly unusual computer work-arounds. This is being directed by the Assistant Sheriff, Mr. If you have any questions, call Mr. So why did they do it? What if one day I want to buy a house? He can handle the gray area and get things done. I need to know who is going to be out of town Vegas conference include dates and or hours you are unavailable. Email from Gerard Smith, August 24, , to Pandora team In addition to being complicated, hiding Anthony Brown was reportedly expensive. Operation OSJ, Summer There was also a second team that operated in far more secrecy than the OSJ guys. This team was headed by Lt. Steve Leavins, and was made up of various homicide detectives, and undercover types, pulled from multiple places in the department. Yet, it was reportedly Leavins, far more than Thompson, who regularly briefed Tanaka. Once Leavins team was up and running, they used a variety of methods to try to get information out of Brown. The two undercovers were both African American, like Brown, and both dressed like inmates with medical conditions, supposedly needing a place to be stashed until a permanent cell could be found for them. Mainly this meant getting Brown treats and special privileges, like lots of smoking breaks, and special deliveries of Kentucky Fried Chicken, all with the purpose of gaining his cooperation. Then on certain nights, whatever deputy was guarding Brown would be told to bring him to a particular room in another area of the station where three to five Leavins team members would question him for hours. When the investigators were finished for the night, the OSJ guard would be texted to retrieve Brown from what was often an otherwise empty room, littered with snack wrappers and coffee cups. Not surprisingly, the OSJ deputies were not informed as to what the Leavins team investigators ever got out of Brown. The team member reportedly saw three or four names of jail deputies whom Brown listed as having gotten him cocaine. There were also names of deputies who Brown indicated owed him money in return for some kind of favor. According to a source, Brown wrote about most of these transactions in pages and pages of highly detailed prose, in which he itemized every nuance of the various alleged exchanges. But, the impression he came away with, he said, was that, if what Brown wrote was true, the informant had information that could implicate a number of MCJ deputies in criminal acts. WLA was not able to determine the truth of the latter statement, but we do have some information about the former. Another OSJ source confirmed the report that marshals had come knocking and added that, on two separate occasions when he was on guard detail for Brown, once at MCJ, a second time at San Dimas, he got a call from Gerard Smith who said that he and his partner should be prepared for the arrival of some US Marshals who had a removal order for Brown. The OSJ deputy on duty was a bit taken aback. It turned out to be a moot point as, in both cases, the marshals never arrived. By the evening of September 11, the Leavins team was finished with Brown. In order to make the transfer possible, the Pandora team had to perform one more act of digital sorcery. Then the real Brown was live scanned, and voila! Anthony Brown was digitally rematerialized. Minutes later, a deputy informed AJIS that inmate Brown was being transferred out of county jail to the custody of the state. And that was that. The next morning, Deputy Smith sent out the following email to the Pandora team. Sept 13, Over the past few weeks you have helped out tremendously, with the safeguarding of inmate Anthony Brown. You have done so without asking

to [sic] many questions and prying into the investigation at hand. Inmate Brown was transferred to Lancaster State Prison last night, so that part of the investigation is over, however this investigation is and will continue to be a time consuming affair. I am both proud and thankful to have each and every one of you to rely on, in a time of need. Your dedication and professionalism is and will continue to be needed. There will continue to be times during this investigation when I will need your help. I am confident that I will be able to call on any of you in a time of need. Once again thank you. Always remember we are a UNIT. We were picked by people, who want to see us succeed and grow. I believe we all have similar goals for our unit, so if someone is lacking in a particular area, we must all work together to help them succeed. If we work together, we will always succeed. If you need anything, give me a call.

**Chapter 2 : Feds to interview Baca about jail abuse, Operation Pandora's Box - latimes**

*Four of the Operation Pandora's Box team members, Mickey Manzo, Gerard Smith, James Sexton, and Noah Kirk, piled into a two-car convoy, and personally drove Brown to the California State Prison at Lancaster on Monday night.*

Nick Begich and Jeane Manning This article was prepared to provide a summary of the contents of a book written in which describes an entirely new class of weapons. The weapons and their effects are described in the following pages. The United States Navy and Air Force have joined with the University of Alaska, Fairbanks, to build a prototype for a ground based "Star Wars" weapon system located in the remote bush country of Alaska. As well as bush dwellers in Alaska, they include: Unlike the protests of the s the objections to HAARP have been registered using the tools of the s. From the Internet, fax machines, syndicated talk radio and a number of alternative print mediums the word is getting out and people are waking up to this new intrusion by an over zealous United States government. The research team put together to gather the materials which eventually found their way into the book never held a formal meeting, never formed a formal organization. Each person acted like a node on a planetary info-spirit-net with one goal held by all -- to keep this controversial new science in the public eye. Advances in Tesla Technology , has pages. This article will only give the highlights. Despite the amount of research footnoted sources , at its heart it is a story about ordinary people who took on an extraordinary challenge in bringing their research forward. It is an advanced model of an "ionospheric heater. It ranges between 40 to 60 miles above the surface of the Earth. Put simply, the apparatus for HAARP is a reversal of a radio telescope; antenna send out signals instead of receiving. HAARP is the test run for a super-powerful radiowave-beaming technology that lifts areas of the ionosphere by focusing a beam and heating those areas. Electromagnetic waves then bounce back onto earth and penetrate everything -- living and dead. HAARP publicity gives the impression that the High-frequency Active Auroral Research Program is mainly an academic project with the goal of changing the ionosphere to improve communications for our own good. Press releases and other information from the military on HAARP continually downplay what it could do. Publicity documents insist that the HAARP project is no different than other ionospheric heaters operating safely throughout the world in places such as Arecibo, Puerto Rico, Tromso, Norway, and the former Soviet Union. However, a government document indicates that the radio-frequency RF power zap will drive the ionosphere to unnatural activities. The military has a relatively-inexpensive defense shield and the University can brag about the most dramatic geophysical manipulation since atmospheric explosions of nuclear bombs. It also makes governmental denials less believable. The military knows how it intends to use this technology, and has made it clear in their documents. The military has deliberately misled the public, through sophisticated word games, deceit and outright disinformation. Moreover, effects from the reckless use of these power levels in our natural shield -- the ionosphere -- could be cataclysmic according to some scientists. Two Alaskans put it bluntly. Independent scientists told Begich and Manning that a HAARP-type "skybuster" with its unforeseen effects could be an act of global vandalism. E-Systems is one of the biggest intelligence contractors in the world -- doing work for the CIA, defense intelligence organizations and others. E-Systems was bought out by Raytheon, which is one of the largest defense contractors in the world. In Raytheon was listed as number forty-two on the Fortune list of companies. The twelve patents below are the backbone of the HAARP project, and are now buried among the thousands of others held in the name of Raytheon. The Eastlund ionospheric heater was different; the radio frequency RF radiation was concentrated and focused to a point in the ionosphere. This difference throws an unprecedented amount of energy into the ionosphere. The Eastlund device would allow a concentration of one watt per cubic centimeter, compared to others only able to deliver about one millionth of one watt. This huge difference could lift and change the ionosphere in the ways necessary to create futuristic effects described in the patent. What would this technology be worth to ARCO, the owner of the patents? They could make enormous profits by beaming electrical power from a powerhouse in the gas fields to the consumer without wires. Some of these new APTI patents were indeed a wireless system for sending electrical power. Further, this ability to spray large areas of Earth with electromagnetic waves of varying frequencies, and to control

changes in those waves, makes it possible to knock out communications on land or sea as well as in the air. Besides actually changing the molecular composition of an atmospheric region, a particular molecule or molecules can be chosen for increased presence. For example, ozone, nitrogen, etc. They told how to make "Nuclear-sized Explosions without Radiation," Power-beaming systems, over-the-horizon radar, detection systems for missiles carrying nuclear warheads, electromagnetic pulses previously produced by thermonuclear weapons and other Star-Wars tricks. Related research by Begich and Manning uncovered bizarre schemes. For example, Air Force documents revealed that a system had been developed for manipulating and disturbing human mental processes through pulsed radio-frequency radiation the stuff of HAARP over large geographical areas. The most telling material about this technology came from writings of Zbigniew Brzezinski former National Security Advisory to U. President Carter and J. MacDonald science advisor to U. President Johnson and a professor of Geophysics at UCLA , as they wrote about use of power-beaming transmitters for geophysical and environmental warfare. The documents showed how these effects might be caused, and the negative effects on human health and thinking. More than 40 pages of the book, with dozens of footnotes, chronicle the work of Harvard professors, military planners and scientists as they plan and test this use of the electromagnetic technology. For example, one of the papers describing this use was from the International Red Cross in Geneva. It even gave the frequency ranges where these effects could occur -- the same ranges which HAARP is capable of broadcasting. The following statement was made more than twenty-five years ago in a book by Brzezinski which he wrote while a professor at Columbia University: MacDonald, a specialist in problems of warfare, says accurately-timed, artificially-excited electronic strokes could lead to a pattern of oscillations that produce relatively high power levels over certain regions of the earth He published papers on the use of environmental control technologies for military purposes. The most profound comment he made as a geophysicist was, "the key to geophysical warfare is the identification of environmental instabilities to which the addition of a small amount of energy would release vastly greater amounts of energy. The geophysicists recognized that adding energy to the environmental soup could have large effects. However, humankind has already added substantial amounts of electromagnetic energy into our environment without understanding what might constitute critical mass. The book by Begich and Manning raises questions: Have these additions been without effect, or is there a cumulative amount beyond which irreparable damage can be done? As early as , Zbigniew Brzezinski predicted a "more controlled and directed society" would gradually appear, linked to technology. This society would be dominated by an elite group which impresses voters by allegedly superior scientific know-how. Technical and scientific momentum would then feed on the situation it exploits," Brzezinski predicted. His forecasts proved accurate. Today, a number of new tools for the "elite" are emerging, and the temptation to use them increases steadily. The policies to permit the tools to be used are already in place. How could the United States be changed, bit by bit, into the predicted highly-controlled technosociety? In another document prepared by the government, the U. Some of these potential uses include dealing with terrorist groups, crowd control, controlling breaches of security at military installations, and antipersonnel techniques in tactical warfare. In all of these cases the EM electromagnetic systems would be used to produce mild to severe physiological disruption or perceptual distortion or disorientation. In addition, the ability of individuals to function could be degraded to such a point that they would be combat ineffective. Another advantage of electromagnetic systems is that they can provide coverage over large areas with a single system. They are silent and countermeasures to them may be difficult to develop One last area where electromagnetic radiation may prove of some value is in enhancing abilities of individuals for anomalous phenomena. The author of the government report refers to an earlier Air Force document about the uses of radio frequency radiation in combat situations. These signals are used to look inside the planet to a depth of many kilometers in order to locate underground munitions, minerals and tunnels. The problem is that the frequency needed for earth-penetrating radiation is within the frequency range most cited for disruption of human mental functions. It may also have profound effects on migration patterns of fish and wild animals which rely on an undisturbed energy field to find their routes. As if electromagnetic pulses in the sky and mental disruption were not enough, T. Eastlund bragged that the super-powerful ionospheric heater could control weather. Begich and Manning brought to light government documents indicating that the military has

weather-control technology. When HAARP is eventually built to its full power level, it could create weather effects over entire hemispheres. She has a Ph. If a big enough hole is punched through it, she predicts, it could pop. David Yarrow of Albany, New York, is a researcher with a background in electronics. This produces not a hole but a long tear -- an incision. As Earth rotates, HAARP will slice across the geomagnetic flux, a donut-shaped spool of magnetic strings -- like longitude meridians on maps. These noisy impulses will vibrate geomagnetic flux lines, sending vibrations all through the geomagnetic web. HAARP will be a man-made microwave finger poking at the web, sending out confusing signals, if not tearing holes in the threads. Even if thought of, the intent of HAARP is to learn to exploit any effects, not to play in tune to global symphonies. His degree is in electrical engineering and he spent four years building nuclear weapons. He talks about imbalances already caused by the industrial and atomic age, especially by radiation of large numbers of tiny, high-velocity particles "like very small spinning tops" into our environment. The unnatural level of motion of highly-energetic particles in the atmosphere and in radiation belts surrounding Earth is the villain in the weather disruptions, according to this model, which describes an Earth discharging its buildup of heat, relieving stress and regaining a balanced condition through earthquakes and volcanic action. Feverish Earth "One might compare the abnormal energetic state of the Earth and its atmosphere to a car battery which has become overcharged with the normal flow of energy jammed up, resulting in hot spots, electrical arcing, physical cracks and general turbulence as the pent-up energy tries to find some place to go. By turning the signal on or off, they could stop the flow of energetic particles. Weather Control Avalanches of energy dislodged by such radio waves could hit us hard. The military has had about twenty years to work on weather warfare methods, which it euphemistically calls weather modification. For example, rainmaking technology was taken for a few test rides in Vietnam. Department of Defense sampled lightning and hurricane manipulation studies in Project Skyfire and Project Stormfury.

## Chapter 3 : Install Pandoras Box Kodi Addon repo | Kodi Tricks

*Feb 11, 2017. At the center of the FBI's investigation into allegations of obstruction of justice by Los Angeles County sheriff's officials was a top-secret program known to a select few deputies as Operation.*

Investigations conducted by Congressional and Senate committees are entering the second year and what has been pieced together by investigators "batting for documents every step of the way" challenges the information the FBI and former senior Obama administration have revealed about the investigation. These discrepancies make it all the more important that the DOJ and FBI turn over documents to the Congressional oversight committees who are investigating what looks like an abuse and weaponization of the tools used by U. In a December article, I interviewed numerous intelligence officials and whistleblowers, who say what happened in the Trump campaign is a microcosm of ongoing abuse of the intelligence apparatus and explain why the American public has a right to know what happened. What was the evidence that allowed the Obama administration to open a counterintelligence investigation into the Trump campaign? Here is what the timeline, based on leaks in the press and information obtained by lawmakers, reveals and why it is so important that the President and Congress do everything in their power to find out what happened and wrap up this investigation. According to several former and current western intelligence sources who spoke to this reporter, the investigations into President Donald Trump and his campaign began much earlier than has been reported and for that matter, it did not begin in the United States but rather across the Atlantic Ocean, in Great Britain. But whether that information was requested by the U. The Guardian reported that British Intelligence sources shared its signals intelligence on people connected to Trump campaign with the United States. However, The Guardian also reports that Germany, Poland, and Estonia also shared communications related to members of the Trump campaign with the United States. John Brennan If what we are being told is true, who inside the U. Was it the U. And how often had American political communications, unknown to the public, been intercepted by foreign governments for political purposes? Moreover, if members of an administration collect information from allies based on overseas communications between opposition, what happens to that intelligence? How is it safeguarded from abuse and who or what agency has the oversight authority to ensure it is a legitimate counterintelligence investigation? Congressional oversight is always after-the-fact and lawmakers have been hampered by roadblocks set up by the DOJ, FBI and former senior officials of the Obama administration, who either have withheld documentation, evaded answering questions or lied. What we do know is that National Security Advisor Lt. Michael Flynn; Carter Page, a short time foreign policy volunteer for the campaign; Paul Manafort, a short-term campaign chair and George Papadopoulos, a young short-term foreign policy advisor were all caught up in the spying dragnet. Michael Flynn, who was the former head of the Defense Intelligence Agency, goes to Moscow to give a speech at an event held by Russia Television, a Russian government-funded news agency known as RT. It was during this time in early March that he learns that he will serve as a volunteer foreign policy advisor on the Trump campaign, according to court records. He had only been with this organization for a short period of time: Fusion GPS presents the firm with a proposal to continue its opposition research on then-candidate Donald Trump, which they had begun in under contract with the Paul Singer-connected Washington Free Beacon. An onslaught of malicious phishing email messages targeting people from the Hillary Clinton campaign were sent around. John Podesta "who responded to the phishing bait" allowed the hackers to gain entry into the campaigns most confidential emails, per reports. Questions still loom as to whether or not Page assisted the FBI in bringing charges against the Russian spies and the extent of his role, according to analysts. Mifsud shows the direct interest in Papadopoulos and arranges a meeting. Mifsud, originally from Malta, was connected to both the British foreign secretary along with Western intelligence agencies, including the CIA, according to various reports and work history. Papadopoulos had gone to Rome as part of a visiting delegation from the London Center. From The Washington Post: Trump began the hour-long meeting by pulling out a list of some of his foreign policy advisers. PhD, adviser to the House of Representatives. The honorable Joe Schmitz, [was] inspector general at the Department of Defense. And I have quite a few more. We have many other people in different

aspects of what we do. Page previously worked with the FBI in the prosecution of redacted and other Russian intelligence officials. Those interviewed by the House Intelligence Committee, however, did not specify the date of the meeting to lawmakers, only recalling it was in late spring. Ambassador Samantha Power Remember her? What did Obama know, what did Valerie Jarrett know? Those are questions that are still left unanswered: Paul Manafort and his partner, Richard Gates, join the Trump campaign. Manafort and Gates worked as political consultants for Ukrainian politicians backed by the Kremlin. Steele was no stranger to Washington D. He had a long time relationship with the FBI and was connected to officials in the State Department, many of whom were closely connected to Hillary and Bill Clinton. These dates are confusing but important. If Steele turned in his first part of the dossier in June, there is a reason to believe he was working much earlier for Fusion GPS. Papadopoulos has a meeting with Professor Joseph Mifsud in London. It was then that Papadopoulos referred to the information Mifsud had relayed to him about Moscow having information on Clinton. It was just that this guy, [Papadopoulos], clearly knew that the Russians did have material on Hillary Clinton “ but whether Trump knew or not? No, he said it would be damaging. At that point, Steele gave Gaeta a copy of the dossier he has put together. Page told this reporter that this is when he first met Stephan Halper, an emeritus professor of the university. Interestingly, Page was not invited to speak at the event but event organizers paid for his trip to attend. It is now widely circulated in reports that Stephan Halper was the informant used by the FBI to keep tabs on the Trump campaign. July 19 “ December 13, John McCain through a representative, as reported by The Guardian. This, however, is clearly not the case as Carter Page began speaking with Halper in mid-July during his trip at the London conference. From an email I sent to a senior member of the Trump campaign on July 16, “ regarding a Professor who: July date not specified: Sources close to the current investigations being conducted in Congress and the Senate have told this reporter that based on all the evidence it appears the counterintelligence investigation began much earlier, possibly as early as March. Two FBI agents that had been dispatched to London, send a summary of their report and interview with Downer to headquarters. Stephan Halper sends an email to Sam Clovis, who was the former national co-chairman of the Trump campaign. It was Clovis who brought Page and Papadopoulos onto the Trump campaign as foreign policy advisors. Clovis, who is not suspected of any wrongdoing, recounts to York that Halper did not divulge that he knew Page and seemed very interested in Papadopoulos. He used Carter Page to get to me and he used me to get to George. George was the target. I think George was the target all along. Intelligence officials are investigating Carter Page and his connections to Russia. The story, which was used as part of the evidence to gain a warrant to spy on Page, also relied on the same information Christopher Steele provided the FBI in his unverified dossier. At this meeting, the FBI official asked Steele if he had ever heard of Papadopoulos, according to an official familiar with the meeting. It did so based on Mr. Steele materially misled the FBI about a key aspect of his dossier efforts, one of which bears on his credibility“ October 31, Or did they try to get a warrant but failed to have enough proof for the Foreign Intelligence Surveillance Court? Despite multiple offers to help the Trump campaign, Halper suggests that Clinton would be the better candidate, as reported by Sputnik Russian news. President Trump becomes the 45th president of the United States after the vote is tallied. Flynn has a phone conversation with the Russian Ambassador Sergey Kislyak. Executive order is signed by Obama announcing sanctions against Russia for interfering in the election. Flynn calls a senior member of the Presidential Transition Team to discuss what if anything he should discuss with Kislyak. Flynn is on vacation with his family. He then calls the Russian Ambassador and has multiple short phone conversations with Kislyak. Flynn calls back the senior Presidential Transition Team official, in Mar-a-Lago, to let them know what he had discussed with Kislyak, according to the plea agreement. Clapper is suspected of leaking the information to CNN on the dossier Comey testified was unverified and salacious, as reported. Senior Obama government officials tell Ignatius that Flynn discussed the sanctions “ including the expulsion from the U. In it she recounts the Jan. The email was discovered by the Senate Judiciary Committee and in a letter they sent, to Rice. The Chairman Charles Grassley and Sen. Lindsey Graham questioned Rice, asking why she would send such a memo to herself. Flynn is not aware that the agents were coming to the White House to conduct an official interview as the FBI had been conducting security briefings with the new transition team that week. The agents did not believe

Flynn lied about his phone conversations with Kislyak. Comey also told lawmakers the agents did not believe Flynn lied, as reported and according to the House Intelligence Committee Russia report. Acting Attorney General Sally Yates goes to the White House to notify the administration that Flynn is not telling the truth and could be blackmailed by the Russians which on its face is extreme since there was no evidence that Flynn had been lying.

### Chapter 4 : Pandora's Box: Unleashing Evil - Season 2 - IMDb

*It came after an month investigation, called Operation Pandora's Box. According to authorities, they wanted to crack down on crime in a specific area. Deputies started by targeting two men with an extensive arrest history but no convictions, year-old Zavien Brand and year-old Joseph Nurse.*
