

## Chapter 1 : The Party of Humanity: Essays in the French Enlightenment by Peter Gay

*The Humanity Party® is a legally registered U.S. political party. Until we have candidates from our party, THumP® calls for a civil uprising demanding real change of the political status quo. This can be done peacefully and according to law at voting booths throughout the world.*

BLOG Introducing a new political party that offers hope for our future with realistic alternatives to the existing government systems. In a world full of uncertainty and turmoil, we can create peace. Our platform is simple, straightforward, and easy to understand. We base it on three main principles: Learn more on our platform overview. We believe that all people should have the Five Basic Necessities of Life , provided free of charge. We already have the technology and the resources to make this a reality today. How will we pay for these social programs? The change we need can be implemented through the proper constitution. Our proposed Constitution is a general outline of desired changes that can be incorporated into the current U. This can be done peacefully and according to law at voting booths throughout the world. See our Frequently Asked Questions. No one else does. Imagine for a moment, that in the future we eventually figure out how to live with each other in peace and harmony. As science and technology advances, we learn to use these advancements for the mutual benefit of the human race, and at that same time, we learn to live in harmony with the natural environment of the earth. We learn to correct both our social and environmental mistakes of the past, and the earth becomes a wonderful place for humans to live. Poverty would be eliminated and people would have greater equitable opportunity to engage in and boost capitalism. In doing so, it will abolish currently accepted inhumane, tyrannical, and unjust policies and practicesâ€”reforming government to serve the people. An Anti-inflation law would be legislated and controlled through an algorithm equation to be charged based on the consumption of all goods and services outside of those required non-essentials to support the FBNL. No fundraising or personal gain is permitted. Our party line revolves around three basic inalienable human rights: Life, Liberty, and the Pursuit of Happiness. Click to read the platform. Click to read the proposed Constitution.

## Chapter 2 : The Humanity Party®

*The "party of humanity" are those who, like Voltaire, had "a passion for humanity and decency, a hatred of fanaticism and stupidity." The philosophes were brave: it was dangerous to attack their stratified, hierarchical, theocratic society.*

History[ edit ] Precursors of transhumanism[ edit ] According to Nick Bostrom , transcendentalist impulses have been expressed at least as far back as the quest for immortality in the Epic of Gilgamesh , as well as in historical quests for the Fountain of Youth , the Elixir of Life , and other efforts to stave off aging and death. The late 19th to early 20th century movement known as Russian cosmism also incorporated some ideas which later developed into the core of the transhumanist movement. Fundamental ideas of transhumanism were first advanced in by the British geneticist J. Haldane in his essay Daedalus: Science and the Future , which predicted that great benefits would come from the application of advanced sciences to human biology and that every such advance would first appear to someone as blasphemy or perversion, "indecent and unnatural". In particular, he was interested in the development of the science of eugenics , ectogenesis creating and sustaining life in an artificial environment , and the application of genetics to improve human characteristics, such as health and intelligence. His article inspired academic and popular interest. Bernal , a crystallographer at Cambridge , wrote *The World, the Flesh and the Devil* in , in which he speculated on the prospects of space colonization and radical changes to human bodies and intelligence through bionic implants and cognitive enhancement. The term itself, however, derives from an earlier paper by the Canadian philosopher W. The ideas raised by these thinkers were explored in the science fiction of the s, notably in Arthur C. A Space Odyssey , in which an alien artifact grants transcendent power to its wielder. In the Material and Man section of the manifesto, Noboru Kawazoe suggests that: What I think will be known by all the people. There is no more individual consciousness, only the will of mankind as a whole. Let an ultraintelligent machine be defined as a machine that can far surpass all the intellectual activities of any man however clever. Thus the first ultraintelligent machine is the last invention that man need ever make. In , FM formerly F. Esfandiary , a futurist who taught "new concepts of the human" at The New School , in New York City , began to identify people who adopt technologies, lifestyles and world views transitional to posthumanity as " transhuman ". Here, FM lectured on his " Third Way " futurist ideology. In , Vita-More authored the Transhumanist Arts Statement [29] and, six years later, produced the cable TV show TransCentury Update on transhumanity, a program which reached over , viewers. In , Eric Drexler published *Engines of Creation: The Coming Era of Nanotechnology*, [30] which discussed the prospects for nanotechnology and molecular assemblers , and founded the Foresight Institute. As the first non-profit organization to research, advocate for, and perform cryonics , the Southern California offices of the Alcor Life Extension Foundation became a center for futurists. In , More, a strategic philosopher, created his own particular transhumanist doctrine, which took the form of the Principles of Extropy, and laid the foundation of modern transhumanism by giving it a new definition: Transhumanism shares many elements of humanism, including a respect for reason and science, a commitment to progress, and a valuing of human or transhuman existence in this life. In , More and Morrow founded the Extropy Institute , a catalyst for networking futurists and brainstorming new memplexes by organizing a series of conferences and, more importantly, providing a mailing list, which exposed many to transhumanist views for the first time during the rise of cyberculture and the cyberdelic counterculture. In , philosophers Nick Bostrom and David Pearce founded the World Transhumanist Association WTA , an international non-governmental organization working toward the recognition of transhumanism as a legitimate subject of scientific inquiry and public policy. The study of the ramifications, promises, and potential dangers of technologies that will enable us to overcome fundamental human limitations, and the related study of the ethical matters involved in developing and using such technologies. In possible contrast with other transhumanist organizations, WTA officials considered that social forces could undermine their futurist visions and needed to be addressed. Outline of transhumanism It is a matter of debate whether transhumanism is a branch of posthumanism and how this philosophical movement should be conceptualised with regard to transhumanism. The latter is often referred to as a variant or activist form of posthumanism by its conservative

, [43] Christian [44] and progressive [45] [46] critics. A common feature of transhumanism and philosophical posthumanism is the future vision of a new intelligent species, into which humanity will evolve and eventually will supplement or supersede it. Transhumanism stresses the evolutionary perspective, including sometimes the creation of a highly intelligent animal species by way of cognitive enhancement i. Some secular humanists conceive transhumanism as an offspring of the humanist freethought movement and argue that transhumanists differ from the humanist mainstream by having a specific focus on technological approaches to resolving human concerns i. In his view, native molecular DNA "continuity" is required for retaining the "self" and no amount of computing power or memory aggregation can replace the essential "stink" of our true genetic identity, which he terms "genity". The philosophy of transhumanism is closely related to technoself studies, an interdisciplinary domain of scholarly research dealing with all aspects of human identity in a technological society and focusing on the changing nature of relationships between humans and technology. While many transhumanist theorists and advocates seek to apply reason, science and technology for the purposes of reducing poverty, disease, disability and malnutrition around the globe, [33] transhumanism is distinctive in its particular focus on the applications of technologies to the improvement of human bodies at the individual level. Many transhumanists actively assess the potential for future technologies and innovative social systems to improve the quality of all life, while seeking to make the material reality of the human condition fulfill the promise of legal and political equality by eliminating congenital mental and physical barriers. Transhumanist philosophers argue that there not only exists a perfectionist ethical imperative for humans to strive for progress and improvement of the human condition, but that it is possible and desirable for humanity to enter a transhuman phase of existence in which humans enhance themselves beyond what is naturally human. In such a phase, natural evolution would be replaced with deliberate participatory or directed evolution. Some theorists such as Ray Kurzweil think that the pace of technological innovation is accelerating and that the next 50 years may yield not only radical technological advances, but possibly a technological singularity, which may fundamentally change the nature of human beings. However, some are also concerned with the possible dangers of extremely rapid technological change and propose options for ensuring that advanced technology is used responsibly. Hank Pellissier, managing director of the Institute for Ethics and Emerging Technologies "â€", surveyed transhumanists. He found that, of the respondents, Uplift science fiction Certain transhumanist philosophers hold that since all assumptions about what others experience are fallible, and that therefore all attempts to help or protect beings that are not capable of correcting what others assume about them no matter how well-intentioned are in danger of actually hurting them, all sentient beings deserve to be sapient. These thinkers argue that the ability to discuss in a falsification-based way constitutes a threshold that is not arbitrary at which it becomes possible for an individual to speak for themselves in a way that is not dependent on exterior assumptions. This includes increasing the neuron count and connectivity in animals as well as accelerating the development of connectivity in order to shorten or ideally skip non-sapient childhood incapable of independently deciding for oneself. Transhumanists of this description stress that the genetic engineering that they advocate is general insertion into both the somatic cells of living beings and in germ cells, and not purging of individuals without the modifications, deeming the latter not only unethical but also unnecessary due to the possibilities of efficient genetic engineering.

## Chapter 3 : Scott Wallace, Democrat, leads anti-human party - Washington Times

*The Party of Humanity frames its discussion about emotions, social conflict, and aesthetics within two broad theories: the emerging field of evolutionary psychology and Kantian moral philosophy.*

Game nights are typically the best nights. What Do You Meme? This is the perfect game for anyone who has spent any time on the internet. Match funny captions with well-known internet memes a rotating judge picks the best one to create an afternoon or evening of hilarity. This techy card game prompts you and your friends to compete in smartphone-based tasks. Just like with Cards Against Humanity, each round has a judge that picks the winner, so get your phone stacked with game changers now. If you love name-dropping, this is the card game for you. Players race to identify people or characters that match the descriptions of two cards as fast as they can example: The player with the most cards once the pile runs out wins this rapid-fire name game. This part wine club part bracket tournament will turn your gang into a bunch of sommeliers over a night filled with four mystery bottles. This card game requires slapping and swearing and laughing at your friends. This dirty word game is marked adults only; sorry, kiddos. Then you will enjoy this game where you basically insult each and every one of your guests. Let the roasting begin! This provocative game will leave your jaw on the floor from the hilarious, creative, and outrageous things your friends say. After everyone writes down a response, and the best part starts "you all guess who said what. Let the hilarious finger pointing begin. Get a slang word and provide a definition for it. Your friends say the darndest things. This game is an offshoot of Cards Against Humanity, but we still love it. A social media-based cardgame from Buzzfeed, this game requires your smartphone and vast knowledge bank of social media celebs, and memes. Charge your phones and get ready to share your secret online obsessions. Grab your most twisted friends for a card-based battle to see who has the weirdest mind. The classic word game is finally digital. Everyone will surely be wanting a piece of this wordsmith electronic, which gets harder as you play. Are you basically Michael Scott from The Office? Any sucker for jokes and innuendos would love this saucy game. This one is fun to do with the kids or you can get vulgar and make it an adults-only game. Like speed scrabble, the game comes in a convenient banana-shaped pouch making it great to play on the go. You and your friends can put your trust to the test by sharing your deepest, most embarrassing secrets in this revealing game. In this game, instead of voting for the funniest answer, you vote for the player each card seems to describe. Talk about finding out who your real friends are. A strategy based game, this one is good for the whole family. Full of connecting train routes to get to your final destination, use this opportunity to teach your little ones about transportation before airplanes. This game is so much more than just being funny. The Mona Lisa or the Big Mac? Players use their best storytelling skills to improvise the best, most ridiculous tale for the party. Like a medieval monopoly, full of knights, peasants, robbers and everything prehistoric. This game is focused around building settlements and protecting your land. Created by comedian Jeff Foxworthy this game is based around familial interactions gone wrong, with a cards against humanity style of playing. Even after endless nights of playing, the pairings that come up still surprise us years later. Additional reporting by Andrea Romano. What are your go-to game night games? Share them with us BritandCo.

### Chapter 4 : Human Rights Party (United States) - Wikipedia

*The Humanity Party. K likes. Introducing a new American political party platform that offers a viable strategic alternative to the American and the.*

Our bodies suffer from toxins in our food, our air, and our water. Our society suffers from lack of universal health care, from unemployment due to downsizing and outsourcing of jobs to cheaper labor markets, from price gouging of consumers and fraudulent and predatory practices across a range of industries, and from homelessness caused by all of the above and more. These wrongs exist, because corporations profit from them. They are allowed to continue, because our elected officials govern for the welfare of their contributors. To learn more click on our examples. Starting July 1, our monthly blog Disposable Consumer Units will expose additional wrongs. If you want to help, click What Can I Do? Our founding documents assure us that we have rights that cannot be taken away. The very reason for having a government is to protect our rights. That to secure these rights, Governments are instituted among Men, deriving their just powers from the consent of the governed. That whenever any Form of Government becomes destructive of these ends, it is the Right of the People to alter or abolish it, and to institute new Government, laying its foundation on such principles and organizing its powers in such form, as to them shall seem most likely to effect their Safety and Happiness. Prudence, indeed, will dictate that Governments long established should not be changed for light and transient causes; and accordingly all experience hath shown, that mankind are more disposed to suffer, while evils are sufferable, than to right themselves by abolishing the forms to which they are accustomed. But when a long train of abuses and usurpations, pursuing invariably the same Object evinces a design to reduce them under absolute Despotism, it is their right, it is their duty, to throw off such Government, and to provide new Guards for their future security. Our economic system is based on the lowest level of human interaction. It rewards exploitation and oppression of the many for the benefit of the few. It is a primitive system that opposes society a partnership and civilization. Wise and virtuous men have been replaced by petty self interested people who crave power, money, and celebrity. With a few exceptions, those who govern have shown that they are willing to sell their integrity and their vote and betray their oath of office in return for corporate favor, campaign contributions, future employment, etc. Government is now run, and laws enacted, to benefit the few, not the many. What started as a Democracy has been subverted into a Plutocracy rule by the rich. Following are a sampling of the shameful results of more than a century of corporate rule. The United States is the only industrialized country in the world that does not provide universal health care for its citizens. Inequality of wealth in the United States is higher than in any other developed country. For the first time in history average Americans are less prosperous and have less education than their parents. Student loan debt is now more than credit card debt. Standard of living is 11th in the world. Literacy is 27th of countries rated. Infant mortality is 43rd. If Congress and State Legislatures wanted to make things better, things would already be better. After all, they make the laws. Corporations are not bound by morals or laws or patriotism; their only allegiance is to profit. The economy should serve the people, not the other way around. All examples are documented and provable or already proven in court. Website by Sheera Bleckman.

### Chapter 5 : Anonymous say The Humanity Party is fake and using their name for votes Â» TechWorm

*Party of Humanity. 10 likes. We are all ONE. "If you have come to help me, you are wasting your time. But if you have come because your liberation is bound up with mine, then let us work together."*

We now have the technology and industry available to us to provide the basic necessities of life to all human beings equally. Some might suggest that this utopian, idealistic proposal is impossible in our current world. Not only can we do it, but we can do it in a matter of a few years! We can do it without disrupting the free market, or rather, the free will of those who want to make a profit and enrich themselves. In fact, we can help those who have a right to their free will and want to be wealthy, become even wealthier, simply by supporting the proposal! We can do it without introducing major changes into the way our world currently operates. We can do it! The following descriptive explanations are only outlines of specific programs, given appropriate names [using acronyms] for each purpose, as might be consistent with the current codes of the United States, a nation where the plan could be immediately established and implemented. There is much more to each program than what is presented herein. By using common sense and the powers given to Congress by this Constitution, government will be able to ascertain other important details and needed aspects of each of the following programs. The examples and suggestions offered below are only for clarity of how this crucial part of the Constitution can be fulfilled. These credits can be stored on cards and will be accepted at any grocery store or food outlet anywhere in the world. However, they will not allow an individual to purchase anything but good, nutritious food. The commission can authorize which foods can be acquired with the FACE card. Nothing that causes the human body any harm will be acceptable; this means no soft drinks, no processed foods, no candy, and no deserts—nothing that negatively affects a healthy body. If a person wants other foods that are not purchasable with the FACE card, that person must go to work and earn the money to buy what he or she desires. The FACE commission will be responsible for the quality and safety of the food it authorizes. It will oversee quality inspectors, whose primary job will be to inspect the production of all of the food that is authorized. A commissioned inspector will visit the farm and inspect the means of production and the quality of the product. The inspectors will ensure safety and quality from the farm to the grocery outlet, to the mouth of the consumer. Any packaged product manufactured processed food by any company will be required to go through the same strict approval process. Both FACE commissioners and inspectors will be compensated sufficiently to make their job a suitable career choice for which the most educated people will compete. FACE can also be approved to be accepted at any authorized buffet restaurant, to support those who do not have the desire or ability to prepare food for themselves. The card will authorize a daily purchase amount. These authorized restaurants will be inspected and approved based on the quality of the food that they offer, which must also be nutritious and meet established FACE standards. After meeting this threshold standard, competition among restaurant entrepreneurs will lead to contests, in effect, to see which will have the best tasting food and most inviting atmosphere in which to entice those with FACE cards to eat. These restaurants are obviously making a profit in offering a meal for that price, and competing among the several restaurant chains to gain customers. Because their customer base will expand significantly once the FACE program is in place, there will be greater competition to offer the most nutritious foods and to win a government supported FACE contract. The same scenario of competition will exist among the other food producers who ship their products to grocery outlets. The rules that govern FACE will not allow monopolization by any one company. The producer that offers the best food at the best price will get the authorization. Authorizing any particular food or restaurant will be as simple as a few key strokes on the FACE central computer, similar to how credit card companies typically monitor the use of credit cards and adjust usage depending on the credit worthiness of the cardholder. With the increased competition to create a business that produces food products and services that meet FACE approval, the quality and presentation of nutritious food will increase significantly through free-market competition. The food producers will continue to be paid by the food retailers just as they are in our current free markets. Because we are accustomed to eating what we want, when we want, and because we can only purchase good, nutritious foods on this plan, the incentive to work will increase, NOT decrease.

Those who choose not to work will only be eating the foods that will ultimately increase their overall physical and mental health. Additionally, no one can abuse the FACE program by purchasing too much food and trying to sell it for money. If you meet the criteria set by this Constitution, you get a card! If you are rich or poor, you get a card! The money that a person would usually spend on food will be redirected into purchases that support a free-market economy. A person who utilizes FACE will have more money to buy other things that support their individuality. Because our current economy is already a worldwide conglomerate, where the economic structure of one nation directly affects that of all other countries, it would not be hard for other countries to implement the FACE program throughout the world. If food retailers knew that 5 million starving Africans were going to be carrying their own FACE card, they would scramble to set up their businesses for profit in Africa; thereby hastening the process for these people to start using their cards. Food production and retail grocery stores and restaurants would replace weapons manufacturing as the number one profitable business in the world. This voucher will be used to rent a HAVE-approved residence. The voucher can also be used for long-term payments of motel or hotel accommodations in the case of an emergency housing need. The government will reimburse the landlord, corporate property management company, or hotel or motel chain according to the average rent of any particular area, or the established market price of the room. Authorized HAVE inspectors will ensure that the property is safe for residency. This program could be very similar to the current U. The size of the rental unit will also help determine the rental amount. Heads of household with children will need only one voucher HAVE per household. The amount approved will depend on the number of dependents under the age of 18 years, or those so dependent by a physical or mental disability, and will also depend upon the number of bedrooms required. Once a person reaches the age of 18, he or she will be eligible for his or her own HAVE. A property owner will only receive one HAVE reimbursement per rental unit, regardless of how many adults and children live there. Because owners must pre-approve their renters, they can make restrictions on the occupancy according to their maintenance needs. HAVE commissioners can also determine the appropriate needs of the people relevant to the ability of property owners to provide rental units. HAVE inspectors will be the main employees of this program. They will be trained to inspect residences and ensure safety. Each residence will be inspected annually. The people who utilize the HAVE program will also be able to contact an inspector if any violation by property owners arises. Property owners are guaranteed payment for each HAVE voucher they receive for the rental of their property. Strict criminal penalties will be enforced to discourage fraud. If convicted of any HAVE rule violation, the property owner will be banned from the program for a set time period, or continually, according to the severity of the violation. The HAVE assistance program will help people find homes in the area in which they wish to reside, and will also assist property owners with any of their problems. The renters will be responsible for the proper upkeep and care of the residence, unless otherwise provided by the landlord or Home Owners Association. Those who continually violate general rules of reasonable care of the property will be penalized. These MFF will be set up for instruction and support rather than punishment. However, those who cannot be trusted to take care of HAVE-subsidized homes, and have repeatedly proven their unwillingness to do so, will be forced to live in these secure, structured, and government managed facilities. The property owners will be responsible for garbage disposal, sewer, and water, unless otherwise approved by the HAVE program. Compensation for these basic utilities will be included in the acceptable market value of the rental property, set by the owner and approved by the HAVE commission. The HAVE program can be used to acquire ownership of any property. If a person wishes to own their own home, they must participate in the free market system. However, by utilizing HAVE, a young couple, for example, will be able to save for a substantial down payment on their own home. If the couple chooses to utilize the HAVE program until they have saved enough money to buy their own home outright, that will be their choice. The free market will flourish because people will be spending the money they would normally have to spend for housing on other things. Construction companies and land developers will rush to build HAVE- approved housing, because they will know that the rent is guaranteed. Competition between companies will lead to better quality housing for everyone because the people get to choose where they live. If a person is living in an approved HAVE residence and a better one is built elsewhere, nothing will prohibit the person from moving to the better unit.

Engineers, architects, and developers will bid on the major contracts needed to house the people of the world just as they did to develop the vast city of Las Vegas, Nevada, USA , in the middle of the desert! Technology will support the development of quality housing anywhere in the world. Wherever there are people who need a home, they will have one through the HAVE program. And when the people have the means to pay for their own privately-owned home, Capitalists will willingly take their money for a profit by providing them with one. Used clothing receptacles can be placed in the communities of the world where people can deposit their unwanted clothing. The CARE commission will establish a way to collect this clothing, wash it, and place it in CARE distribution facilities where the clothing will be free of charge to anyone needing it. If any clothing is not obtained within a period of one year, it will be sent to a CARE-supported recycling center that will recycle the clothing into other fashion products that are in demand in the free market system. The recycled clothing will eventually make enough money to pay for the rest of CARE needs. Through the HUMANE program, people will choose their own doctor, hospital, dentist, pharmacist, psychologist, therapist, etc. The best doctors and the best hospitals will see the most patients; therefore, they will make the most money. A congressionally established HUMANE commission will determine the proper amount to compensate health care providers for their services, compensating healthcare professionals appropriately and fairly. Nothing is more valuable to a well-fed, well-housed, well-clothed person than their health. Therefore, health care providers will be compensated sufficiently to affect the most efficient and advanced health care for all people. Again, people get to choose who their doctor is or which hospital they wish to go to for treatment, without restrictions. Health care providers will be drawn into the forefront of free market competition. No other government-backed career will earn more than health care professionals, thus enticing those who want to become wealthy with an incentive and the means to do so in helping provide health services for others. Each person will have a HUMANE card that will identify the person and have his or her medical records encrypted upon a microchip in their personal card. No matter where one chooses to go, that person will have their medical records with them. If someone loses their card, their medical information will be readily available. Of course, all of this will be strictly confidential. With a centralized database and the elimination of cash as a means of payment, the ability for health care providers to cheat the system will be eliminated.

### Chapter 6 : Cards Against Humanity

*The nine related essays in The Party of Humanity fall into three divisions: three are on Voltaire, presenting the great philosophe as a tough-minded, realistic man of letters who tried to reshape his world, rather than as a merely brittle and shallow wit.*
