

Chapter 1 : Great Books Forgotten or Unknown

Philco Baby. Irvin E. Faust Issue 31, Winter-Spring "It is steel and plastic and the Philco people make a million of them. And a million dollars besides.

Straightening up for the first time since *Rambling With Gambling*, he looked around and again carefully checked. Almost satisfied, he nodded and looked down and with his thumb and forefinger delicately circled held out his pocket so the little voice inside could get some well-deserved air. And typically the shrewd little bugger had reached down and was producing, Morty realized with growing certainty, the Chairman of the Board. Chair breezed, they gottan awfullotta coffee in Brazil, and standing respectfully beside his last box, head down, Morty memorized the new fact that coffee beans grow by the zillions way down among brazilians wherever brazilians was. He stood stiffly, mouthing the words until the Chairman had finished, then as though the command had been snapped by Mr. Grossman himself, he bent down to finish the line-up to the wall by the first afternoon Robert Hall jingle. The voice next to his ear purring away, the big, filled room, neat and cosy, like his own cosy room. Slowly but precisely, he lifted boxes, fitted and closed, feeling the assurance of each familiar position. Pleased that all the while Bob was confidingâ€”anxiously â€”in him. Not, of course, that Bob had right to worry, for Morty was plenty safe all right, and not just half safe and a little sniff under the arm for Bob and the little geezer was proof positive. Plus, for insurance against offending, the Arrid with Perstop in his own drawer, marked with his own name, Morty J. He worked in his quiet, soothing swing, alone in stock but not really alone , handling all the work Billy and he used to do together, until Mr. Grossman patted him on the shoulder and rewarded him with the entire room while Billy worked the truck with Sam. Which was a fine reward since Billy never talked to him anyway, except to say knock down that stinkin noise jocko, and it gave him the final, necessary area to complete his circle of command. Whether around him as he worked, or in an invisible case as he walked the street with the world his world reporting from his pocket, or in the darkness of his West 88th Street room, these manageable areas formed the compartments of his life. Aware of the continuity in this final link, he moved now along his chalkmark, hearing Bob Manders talk of familiar thingsâ€”the Chairman, his boys, Sammy, Pete and Deano, Lavoris and Chockfullanuts donuts. Listening with the reassuring knowledge that they would check into each life space, he assessed soft little Patti, happy Julius and weisenheimer Bobby Darin, who would try for chairmanship, hut fail miserably. And reinforced, he pulled hard for the wall, knowing in a dark, dim way that he was repeating the terrible swim for the dock in the great lake of that special camp mama had sent him to many years ago. Next to the wall he sat down on his stool and pulled out his first Kent with the micronite filter of the day. He lit up, inhaled and felt so much better naturally about smoking with the taste of Kent. After the news, he repeated station identification and then with a happy pull of surprise welcomed the razor-fine voice of William B. He permitted himself another Kent, pulling deeply on the filtered flavor and stared happily at the floor, which like his pocket and private compartments, was always there. She shivered him with a draught in his stomach. Since the time in that class with all the strange, jerking, drooling kids, ugliness had chilled him, then reminded him of his superiority. What in the world are you listening to? And a million dollars besides. You know, Morty, I like William B. And I like the Make Believe Ballroom too. Who would say things he had locked up in his head? Could all that ugly? But wait, that kind said things just to agree, to get you someplace But she knew the Ballroom Yeah, well it was his Ballroom The heavy body followed the voice and she filled the doorway, thick, tight, spiny and blonde; a cow, a soft cow. Beside her, Billy boy, red and sweating from the morning deliveries. Besides he gotta be free to do his union bustin. He roused up and hurried to the back to wash up with Dial for people who like people who like Dial. The morning was boxed in, so lunch was the next hurdle. He gathered himself and walked downstairs on the right, walked to Ninth Avenue and crossed at his corner and proceeding still on the right, with the image of M. He entered through the waiting side entrance and occupied his private space while his stool at the counter served another customer. When it was released, he straddled it, felt the smooth old leather under his behind and knew he was safely at lunch. Good old Roger winked, came over and gravely shook hands; the good old guy always shook hands. He did it and Morty

wiggled on the stool. Another wriggle; he looked at Roger and brimming all over with excitement, circled his forefinger and thumb and propped the other three straight up like an Indian headdress. Morty drank the golden brew, savoring the extra two weeks of mellowing in the cool autumn sun. Roger was beckoning; he swallowed hard and leaned far over. Their smiles were full on him and he dropped his eyes. Roger looked thoughtful; he pointed to a smiling, black haired girl. Dial-clean, the whiteness behind her neat red Ups proclaiming careful brushing after every meal. He looked straight at Pru and caught her need. His hand snaked to his pocket and found the dial and brushed it. Want to keep reading?

Normally you will see freestanding stoves in The Old Road Home. That goes without saying. However, a lot of our pals across the miles have built-in units. Classic built-ins are coming back and big! In this issue, you will see the newest and coolest features stoves had to show off nearly 50 years ago. Quite a few people have fond memories of these units. They were such a radical departure from the freestanding units. Colors offered in enamel were rainbow-like. Again, many of these units are still around today with the demand definitely increasing. If you think you are in the market for a older built-in, make sure all the parts are there and check for damage. Some models could have very low original parts availability. For almost a decade The Old Road Home has displayed just about every type of antique appliance one can imagine. This year we have had more people than ever before joining The Old Appliance Club; everyone wants to see, learn about or share their old appliance experience. Like the rest of us, Bruce likes to save money! If you have ever had water heater problems, you will not want to miss this article. This should keep your heater going for decades. Way back in , a New York doctor utilized an experimental water chiller designed by Frank Faust of General Electric. Bernard Nagengast, TOAC member and expert refrigeration historian shares this one of a kind photo with our tribe. Bern never ceases to amaze us when it comes to the history of refrigeration. He shares so many rare pictures and stories with TOAC, and this picture is a blockbuster! Carrene was the refrigerant used in the Grunow refrigerator and it was thought to be absolutely SAFE! That was until the EPA found what it could really do to humans! Grunow Mausoleum nestled just above the Des Plaines River. So much of the background on old companies and inventors disappears over the years. Thanks to people like Mike and Bern we are able to show you what it was like when the products were new! Here you will see s products like genuine General Electric Mazda light bulbs, the G. Washing machine, and the fabulous General Electric cooking range for Louie where it was born. Refrigeratin Jim Apthorpe conducts a long, hot safari in Florida. Just when it looks like all is lost, he rescues an early GE DR Monitor Top and lives to tell about it and the amphibian he discovered living inside. The technique is a winner and the dollar outlay is very modest. Glad you asked dear friends. This issue The Old Road Home will carry more ads than ever before. See 2 rare and fantastic looking Reliable ranges American Stove Co. To restore old appliances, parts or sometime entire units are desperately needed. Quite a few people pour over the classifieds in TORH for goods that are needed by others. If you are seeking to reduce the tonnage on your plot, check out the wanted column. Everything and anything is needed and hopefully you can supply it, make a few bucks and maybe even make a new friend! Mike shares history, pictures, a chart full of technical information and his point of view on why this elder cooler should not be scrapped. The good news is that it can be revamped for modern use. If the name Grunow sounds familiar, it may be because the company was well known for the finely engineered radios manufactured within quality furniture cabinets. The fridge was found sinking in mud inside a dilapidated shed. Their restoration pictures and tale are amazing. Monitor Top that are in need of a new home. Maybe it could be sitting in your kitchen soon? This model is an all cast aluminum 4-slice model with mica windows. It slurps down a whopping 2, watts of power too! Original advertising on this model and other Toastmaster Toasters including the 3, 4 and 8 slice models are featured. Pay special attention to how the cords used to look way back when. If you wish to see a spectacular eight burner, three oven gas range built by Reliable range company see page 17 of this issue. It is an astounding piece of kitchen machinery! The delivery plane looks like the old DC series. Also pictured in this series is an early appliance parade float on the back of a s flatbed truck. Hotpoint stoves and Frigidaire refrigerators are the featured appliances. Check these features out: Watch for an especially interesting letter concerning vintage range thermostats. Talk to one, talk to all for expert services. These are custom-built to look just like the wood and glass styles of past decades comes with interior lighting, too! These brand-new versions are a pleasure to use!

Chapter 3 : Orson Welles radio credits - Wikipedia

Faust's best characters, the Puerto Rican janitor in Roar Lion Roar, the questing professor in The Steagle, the transistor-radio addict in Philco Baby, are consumed by a world of mass-produced trivia and popular mythology.

Early history[edit] Philco was founded in as Helios Electric Company. As this line of business slowly foundered over the last decade of the 19th century, the firm experienced increasingly difficult times. As the Philadelphia Storage Battery Company, in it began making batteries for electric vehicles. They later supplied home charging batteries to the infant radio industry. The Philco brand name appeared in From to , all radios were powered by storage batteries which were fairly expensive and often messy in the home. By over a million of these units had been sold, but the invention of the vacuum tube rectifier incorporated into the coming line of radio sets made this technology obsolete. In , Philco decided to begin making radios. Up to that time most radios were handmade and priced for relatively wealthy consumers. Atwater-Kent, the leading radio seller, coincidentally was also located in Philadelphia. The Philadelphia Storage Battery Company decided that prices of radios could be scaled for a mass market by incorporating assembly line techniques then only used by the automobile industry. Like other makers of the era, they offered a wide line of radios beginning with five-tube sets all the way up to high-fidelity consoles with 20 tubes in Philco also made battery-powered radios which were by then called "farm radios", most of which had cabinets identical to their AC powered versions. The Philco "Baby Grand" today called "cathedral" radios by collectors was a shape that featured an arched top that wrapped from the sides over the top. This was for economic reason partly, as one piece of wood formed both the top and sides. Philco sold far more of this style than any other maker, a total of over two million in over twenty models, with from four to eleven tubes from to ; [7] many of them exist today in collections. A few of their innovations were very futuristic. From to , they sold radios that were remotely operated by wireless controls, the one-tube "Mystery Control", used on their tube model RX-SU or A beam of light was focused on the mirror which caused a vibrating light to hit a solar cell and produce the audio signal. While this system had some advantages over the standard crystal phono cartridge of the time, it was unreliable and is today a very difficult unit to restore. By , Philco had led the radio industry in volume sales for 24 straight years, selling over 30 million radios. The Philco Predicta TV set was introduced in for the model year. It was a black and white television with the picture tube mounted in a unique steerable pod on a pedestal. There were many versions: Its specially designed, high-deflection-angle to achieve a shallow front-to-back depth picture tube turned out to be a very unreliable design, and cost the company dearly in repairs and reputation. Many of them were sold to motels and bars due to the convenience of the swivel tube arrangement. It was discontinued in ; a great failure for Philco. Philco Surface Barrier transistor announcement All-Transistor car radio developed and produced by Chrysler and Philco in Transistor research and product development[edit] See also: Philco computers In late , engineers at Philco Corporation invented the surface barrier transistor , [12] the first high frequency transistor suitable for use in high speed computers. The project was called SOLO, since the idea was to have powerful personal workstations, and the computer was later commercially named the Philco Transac S [14]. This was originally announced in the June 28, , edition of the Wall Street Journal. Its circuitry used three Philco germanium PNP alloy-fused junction audio frequency transistors. After the season ended, Philco decided to discontinue the all-transistor portable 45rpm phonograph models, for transistors were too expensive compared to vacuum tubes. Wong of the Institute for Advanced Study. It incorporated a speed up technique for asynchronous adders reducing the time for additive carry-overs to propagate. Three of the machines were installed that year[citation needed] and ran until The machines were also used by research labs at Westinghouse Electric and General Electric. Space systems[edit] In , NASA contracted with Philco to build the worldwide tracking station network for Project Mercury , and all subsequent man-in-space projects until the ground station network was replaced by the TDRS communication satellites in the s. In later years, the company produced automotive electronic controls, aerospace tracking systems, and artificial satellites. In , Philco was also responsible for the design, manufacturing, installation, and service of all the consoles used in both MOCRs Mission Operations Control Rooms, a. Water purification

systems[edit] In , Philco-Ford began to sell reverse osmosis -based water purification systems that used tube-shaped membranes developed by the company to filter and desalinate raw polluted water for municipal utilities and manufacturing. Philco Corporation by had applied for bankruptcy protection. The company continued to provide Ford with car and truck radio receivers and consumer product investments were made to color television production. Along with color and black and white television Philco continued to produce refrigerators, washers, dryers, air conditioners, stoves, radios, portable transistor radios, portable phonographs, audio console systems with high quality "Mastercraft" furniture cabinets, and component stereo systems. The company branded Philco products as "Philco-Ford" in , and console stereo systems reached their zenith during and , with high quality cabinet construction and powerful stereo chassis systems of and watt consoles. Philco at one time was one of the largest furniture producers in the world and the end was near for building "high quality" furniture cabinets along with stereo equipment. High quality cabinets were replaced with cheaper wood composites covered in vinyl paper with plastic wood pieces, and the quality electronic systems were replaced with cheaper versions imported from Philco in Taiwan. Eventually, all consumer electronic goods would be made by Philco-Taiwan, to lower costs of production and be more competitive in the market. This trend was prevailing in the American electronics industry but Philco-Ford was one of the first to implement. In , a complete line of refrigerators was introduced, consisting of eight side-by-side "Cold Guard" models, which used about one-third less electricity than comparable competitive makes. The company as well as the Sylvania brand name was acquired from GTE by Philips in in order to gain the rights to use the Philips trademark in the United States Philco had been able to keep Philips from using its trademark legally because of the similar-sounding names ; as a consequence, Philips sold its products under the name " Norelco " in the United States. Philips continues to use the Philco name for promotional consumer electronics and has licensed the name for private brands and retro style consumer electronics. Bendix automatic washing machine As of , the company is mainly recognised in Australia. The presence of Philco in Argentina dates since and remains a traditional mark of appliances in this country. It currently manufactures refrigerators by Helametal Catamarca S.

Chapter 4 : Philco - Wikipedia

This is seen in abundance in the first story "Philco Baby" which is rich in arcane pop culture references that quickly bury a reader trying to find meaning in them. "The Duke Imlach Story" suffers from the same flu, revolving around songs no one knows any longer, and pop references that must be googled to make sense.

Chapter 5 : Paris Review - Philco Baby

This Philco "Baby Grand" met demand of the Depression with a more compact radio with style. This example is a rare find with the best original finish I've seen on this model. The grille cloth is the correct replacement.
