

Contrasting versions are shown to not simply clash or contradict each other but to provide elaborations and alternative ways of describing events. Cuff shows that versions are not rigidly held, and that parties show an awareness of how their versions contribute to an intersubjective conversation.

The demonstrations used in class are but two of countless examples that can be offered. You must attend this lecture to obtain the information. Despite the ubiquity of illustrations of the scientific method in everyday life, society is filled with examples that fall short of science in one or more steps. Most religions are based on specific doctrines and codes of conduct that followers agree to accept. There is no attempt to "improve" religion by changing the mores every few years and assessing the impact. They are also provided with a set of rules a model of how that goal should be pursued. But there is rarely a formal procedure for evaluating whether the goal is achieved, and there is almost never a procedure for implementing a new model when the old one is deemed inadequate. Elected officials can and so sometimes bring about change, and the political climate now is more demanding of government accountability than in the past, but agencies generally are not established with the kind of built-in self-improvement system that underlies the scientific method. The federal and state constitutions DO specify how to implement a new model - via amendments. The jury has the goal of discovering whether the defendant is guilty or not guilty. This is the goal of deciding between the model advocated by the defense, and the model advocated by the prosecution. Data are presented by the defense and prosecution during the trial, and the jury evaluates the two models based on that evidence. Appeal of a verdict would appear to be an example of revision, and it is. However, the types of model revision permitted on appeal are somewhat restricted. Conversely, the prohibition against double jeopardy prevents the prosecution from reopening a case after a "not guilty" verdict has been returned, even in light of new and compelling data suggesting that the defendant was actually guilty. Living in the U. Technology and science are interrelated, and technology enables us to do better science, but technology is not science. Science is the process used to develop better technology, whereas technology is simply the application of what has been learned with science. However, their predictions are virtually never evaluated by their clients, at least in a rigorous fashion. So the example of astrology predictions contains goals and models, but the other elements are absent. Use of the slot machine is presumably just chance by pulling a lever or pushing a button, a fully automated process, so it does not allow any revision in how the game is played. Playing cards, however, can use the scientific method because there is a lot of strategy that can be adopted and altered by the player.

Chapter 2 : Problems of versions in everyday situations / E.C. Cuff. - Version details - Trove

This work offers a combination of theoretical critique and empirical study. It criticizes Alfred Schutz's discussion of multiple realities, Melvin Pollner's account of reality disjunctions, and.
