Here is where we are today. A walk of faith. Resourcefulness with our Resources. One thing we have lived by during this homeschool journey, is faith. Faith that God will provide the resources when there is a need. Sometimes the product comes the day after a thought is born, but a prayer has not been offered. Sometimes the day before. Our experience, after nine years of trusting "is that my God, is heavily invested into this journey with me. That said, It is not always easy. I ask for advice and people give solutions that cost hundreds of dollars. I do have a wonderful source for scholarship money for necessities, and am not shy in asking. However, I want to make sure that when I ask " it is a proven block that is needed for the wall. Not a potted plant, or an ornate addition to the wall, but a building block. So " I realize that if I were to purchase Teaching Textbooks 6 and 7 my struggle would mostly be over. Same with Math U See. I think it would help, but again, mid year. We may have the opportunity to receive a MUS product in the spring " but my eyes will be on Algebra 2. Asking myself, What works? Videos for the instructor. Clear exercises to practice the new skill today. A few follow up problems for memory but not every day. Order of Operations is two lessons. Factors moves from 19 to 30, to 56 to Spiral Lessons, followed up by Spiral Practice. No wonder we hit a wall! In Teaching Textbooks, the lesson topics are presented as Mastery, but the practice problems are given as spiral. At least every day, one builds on yesterday. Horizons was harder to follow. It seemed to mimic more of the Public School Scope and Sequence " more words than explanations. More ideas than solid skills. Very strange combinations of skills presented. But this helped me as well. Each publication had different ideas of how much time to spend on topics. Some heavy on Geometry. Khan seemed to be the most eager to set up the 6th grader to perform Algebra 1 the next year. Still there with me?

For example, during quarterly exam week, students are provided with two full-length practice exams. The guidelines are based on years of teaching experience, as well as observing university professors. And the best professors, the ones who really wanted you to learn the material, did two things: But are the practice exams helpful? Well, see for yourself. The graph is a display of the obvious fact that good study habits build fluency, resulting in good scores on the actual exam. Being fluent in math means you know how to use the rules to solve new problems. And the purpose of the Practice Exams in Shormann Math is to provide new problems so the student can prove to themselves whether they are fluent, and if not, what they need to review. At some point in your life, you will be tested on a large amount of information. And if you really want that license, or that job, etc. Scores are from Quarterly Exam 1 taken by students in Dr. The three categories are based on student performance on the 2 practice exams take prior to the actual exam. Students who put the effort into retaking each practice exam were rewarded for their effort with a higher grade. Students are also encouraged to show work on their paper, solving each problem by hand. The practice exams were counted as one of their homework grades, providing further encouragement to complete them. The three categories were broken down as follows: Of special note is the fact that the trend was consistent, regardless of which course students were doing Algebra 1 or 2. Also, because the students had the opportunity to retake each practice exam until they received a , study effort, and not skill level, was the main factor influencing performance on the actual exam. Not all students are equally gifted in math or any subject , but students who are less-skilled at math can do better by studying harder. These results provide good evidence that, with Shormann Math, students who want to learn math, can, regardless of skill level!
