A proud history of service T he first running water to be piped into Oxford Borough arrived on Thursday, Jan. The fire hydrants were opened to alleviate the pressure, and in just 20 minutes, water gushed forth. John Miller Dickey journeyed to Philadelphia to purchase an engine and hose cart from fire companies in the city, which had just turned career from volunteer, thus making a lot of equipment available. The Oxford Fire Company was organized on February 6, , when 21 young men met in the stock room of Showalter and Mathews in the Dickey building, now known as the Peoples Bank of Oxford. At the second meeting, the name was changed to Union Fire Company No. At this meeting, George E. Jones was elected Chief Engineer. Shortly after this, the Burgess and the Town Council purchased a quantity of hose for use of the borough. Shortly after this, the fire engine, hose cart, and feet of hose purchased by Rev. Dickey arrived and were turned over to the fledgling fire company. Early in July, a hook and ladder truck was added to the equipment of the company. This would be a two-story frame building. The second floor was used for the meetings of the company. Stables were built for the horses in the rear. This gave better protection than before. In , the company moved into a new station on the south side of Market Street where the Oxford Terrace Apartments now stand. This is now their present location. This truck shortly afterward, answered an alarm for the first time out of the borough, in Lower Oxford Township. In , the Oxford Ambulance Division was formed by civic minded residents. The fire company housed their ambulance and supplied personnel to man the equipment. Finances were always a problem and in the entire operation was turned over to the fire company. To assure this service would continue, an ambulance club was formed in This has been the major funding for the Ambulance Division of the fire company. A Ladies Auxiliary to the fire company was formed in becoming an integral part in the day-to-day operation of the organization. In the middle of , the fire company went modern when they installed two-way radio communications with a base station and all of the equipment. In , the fire company celebrated their th anniversary with a week-long gala event, topped by the largest parade ever held in Oxford. Approximately companies from four states helped the local firemen on this grand occasion. Women were admitted to the company as members in , and have taken their place beside the men ever since. Not available in all areas. For news, events, and information log onto OxfordPA. Have you visited lately? D o you want to be the first to know what is happening in Downtown Oxford and surrounding areas? Bookmark the community calendar DowntownOxfordPA. Business ownership requires your full commitment of time, money and heart. If you have a great business plan, visit our webpage www.VisittheMarket.com. Visit the market at the corner of Third and Locust streets every Tuesday from noon to 5 p. The market will get a few updates this year under the management of Jen Champion of Pickled Pickles. Jen has extensive experience in business and market management, and we are thrilled she is willing to volunteer her expertise to enhance our weekly market! Our merchants are waiting to provide you incredible customer service, a friendly smile and a great deal. The mural is complete at 14 S. Public and Pop up art create a sense of place, pride and joy in a community. The other three-quarters of our budget is derived from events, fundraising, sponsorships and grants. Our purpose is to work with other organizations to provide an attractive, walkable and destination-worthy Downtown. We are responsible for beautification efforts such as flowers lining the street, This mural was completed last summer, opening the door to more public art downtown. This is a big job for one small non-profit, and that is why we rely on volunteers. Volunteers come in the form of committee and board members, office assistance, event staff and streetscape maintenance. Without the support and continuous contributions of Oxford advocates, there would be no OMI. So this is a shout-out to all who give freely of their time, resources and encouragement, helping to make Oxford a great place to live, work, play and create! If all goes according to plan, a new playground could be installed at the Oxford Memorial Park this year. Many residents and business

owners in the Oxford area have dared to imagine just such a scenario, and they have supported the years-long effort to install an inclusive playground at the Oxford Memorial Park. If all goes according to plan, children will be enjoying the new playground equipment this year. It was Matthews who first raised the idea of installing playground equipment specifically for children with special needs at the Oxford Memorial Park. The idea that a child with special needs would have to sit on the sidelines and watch while a brother, sister, or a friend glided down the sliding board or played on the swing set troubled Matthews. Then, a conversation between Betsy Brantner, who was then the borough manager of Oxford, and Dr. Marilyn Knaub, who was then the president of the Oxford Rotary club, led the Rotary to make the inclusive playground its special project for the community. The Rotary operates the Oxford Rotary Foundation, which is a charitable organization, and the Foundation took the lead in raising money for a playground that would be welcoming to all children. Raymond Fischer, the president of the Oxford Rotary Foundation. The design of inclusive environments is a critical first step to providing the foundation for inclusive play to occur. There are seven principles of inclusive play design: Fischer said that once the equipment is delivered to the park, it will be a very efficient process to get the new playground built. The area where the new playground equipment will be set up will need to be excavated—the mulch and borders will be removed, the area Photo by Steven Hoffman will be leveled off and shaped. Marilyn Knaub left brought the idea of taking on the inclusive playground as a project of the main structure, including platforms to the Oxford Rotary Club. She met with Dr. Raymond Fischer center and Paul Matthews and roofs will be part of the preparation right to discuss the project at the Oxford Memorial Park when the Oxford Rotary Club work. When the equipment is delivered, the Foundation first got involved with the effort. There will then be a window of one week or two der for the inclusive playground to become a reality. Matthews weeks that will be necessary for the delivery of stone, and to schedule the crew to apply a rubber safety surface. This soft surface material will allow children in wheelchairs or with mobility Continued on Page 20 18 For news, events, and information log onto OxfordPA. Matthews said that once the playground is installed, there will be a ribbon-cutting ceremony to celebrate the opening of the playground. It will be the only inclusive playground in the area. Fischer said that the true value of the playground will become apparent when children of all abilities are enjoying the new equipment together. People from other communities will be coming here once we have this equipment. Raymond Fischer, president of Oxford Rotary Foundation including how to contribute to the effort. Contributions can be made through Paypal on the website, and checks can be sent to the Oxford Rotary Foundation, Inc. Box 27 Oxford, PA, Need a machine for testing the strength of marine rope, a machine for herbal extraction, or a unit that can process at , psi? Custom Machine and Design, Inc. The company he and a partner started in his garage in has grown into a full-service machine and fabrication shop capable of designing and producing whatever their customer needs. Customers come from across the country and all over the world, including China, Brazil and Slovakia. The pharmaceuticals and food processing industries are a major part of their business as they design and build custom sanitary processing equipment. Price said demand is increasing for equipment for medical marijuana extraction. Custom Machine and Design fabricates in metal, plastics and ceramics, and is known for the high-pressure and analytical process equipment it produces. Price said he started part time with a vision to build parts and 22 By Carla Lucas equipment for the pharmacy and food service industries. By April , both partners had quit their day jobs and were working full time in the fabrication company. Custom Machine and Design has about 20 employees. He is currently on the board of Oxford Mainstreet, Inc. Custom Machine and Design is located at 21 Commerce Blvd. They can be reached at More information is available online at www. For Brian Carter, his wife Kristen and their son Scott, their Oxford business is also the family business. Born and raised in Oxford, Brian and Kristen began their company in , and since then, have earned a solid reputation for their work in Oxford and surrounding communities. With Scott on board, the company is a complete landscape service provider -from mowing, fertilization, aeration and sod installation, to lawn and garden maintenance, such as mulching, pruning, edging and spring and fall clean-up. They also do custom hay bailing, excavation, and snow removal. Continued on Page 24 Photo by Richard L. Is there a better way to

Comecelebrate celebrate of Chevy Trucks with us! Come yearsyears of Chevy Trucks with us next week! Sign up today by calling The Dunes Pro Shop 28, at It was a Mountie handdelivering a pair of traffic tickets for violations alleged to have occurred more than two months earlier in a city nearly kilometres away. Worden said the officer told him there were no Mounties involved in the tickets. Worden was mystified how that could be the case and wondered why the tickets came so long after the day in question. When Worden complained that he had just received the tickets, 65 days after the violation date, the clerk told him he would first need to get the notice that was given to him dated by the Barriere RCMP, the detachment that delivered the tickets. Worden then received a call in November from someone at the courthouse asking what his dispute was about. There was further confusion when Worden said he was initially told there was no record of the tickets in their system, but the dispute filing went ahead. With the dispute filed and a court date set for Aug. He decided to make his case in court and, after a seven-hour drive on Aug. Worden said he was told. Worden said he told the clerk. Worden said the judge sympathized and said Worden should have received a letter. The judge asked the bailiff to produce a copy of the letter, which Worden said he saw for the first time in court that day. Worden said he has since made a half-dozen phone calls trying to find who was responsible for never sending the letter, but heard nothing helpful in reply. Worden asked before his court date. KALS multi week or single session daytime classes start soon. Fall and Winter terms offer over 30 courses as varied as your interests. Check out the full program at [www. Thriving and Surviving Workshop Making Sense of it All Learn how to manage a holistic approach in our 6 week workshop. We can help you in dealing with frustration, pain, sleep, healthy eating and communicating effectively. Six week program starting September 26th, 2: For more information, visit \[http:\]\(http://www.thrivingandsurviving.com\) No cost to participants. Register now while space is still available! The remainder will be paid for privately via ticket sales, corporate sponsorship and a contribution from the International Olympic Committee in cash and services. A new fieldhouse, which has long been a priority for Calgary, and a mid-size arena seating up to 6, were the only new venues proposed in the plan, although a curling venue has yet to be identified. Edmonton is under consideration as a possible site for curling. City council has reserved the right to pull the plug on the process at any time. A plebiscite asking Calgarians if they want to host the Winter Games is scheduled for Nov. IOC members will vote on a host city in September The plan does not include a new NHL-sized arena. Parkview Activity 12 week free seminar: He was posed a question from a listener, who wanted to know what he would say to a U. The recreational use of marijuana in Canada officially becomes legal on Oct. Customs and Border Protection office said in a statement earlier this year that medical and recreational marijuana may be legal in some U. The federal government has pushed to have homegrown pot allowed, but Manitoba and Quebec have fought the move and insisted the provinces have the right to restrict it. Man in Winnipeg wins second Rivertown players!](http://www.thrivingandsurviving.com)

Timeline of Bakersfield, California Archaeological evidence indicates the presence of Native American settlements dating back thousands of years. Owing to the remoteness and inaccessibility of the region, however, the Yokuts remained largely isolated until after the Mexican War of Independence , when Mexican settlers began to migrate to the area. Following the discovery of gold in California in , settlers flooded into the San Joaquin Valley. In , gold was discovered along the Kern River in the southern Sierra Nevada , and in , oil was discovered in the valley. The area was subject to periodic flooding from the Kern River, which occupied what is now the downtown area, and experienced outbreaks of malaria. But he was a Kentuckian, a handy man with a gun, and not lacking in initiative and resource when the mood moved him. Wanting to fire him but fearing reprisals, they came up with a scheme to disincorporate, effectively leaving him without an employer. According to local historian Gilbert Gia [26] the city was also failing to collect the taxes it needed for services. Migration from Texas , Louisiana , Oklahoma , and Southern California brought new residents, who were mostly employed by the oil industry. On July 21, , an earthquake struck at 4: A large aftershock occurred on July 29, and did minor architectural damage, but raised fears that the flow of the Friant-Kern Canal could be dangerously altered, potentially flooding the city and surrounding areas. Aftershocks, for the next month, had become normal to Bakersfield residents until, on August 22 at 3: Bakersfield lies near the southern "horseshoe" end of the San Joaquin Valley , with the southern tip of the Sierra Nevada just to the east. At the census, the city had a total area of The Panorama Bluffs aka "The Bluffs" are located in northeast Bakersfield and are ideal for early morning or evening walks, jogs, or hikes. Communities and neighborhoods[edit] See also: List of neighborhoods in Bakersfield Bakersfield has historically referred to its regions by directional names. East Bakersfield generally refers to the former town of Sumner later renamed East Bakersfield. As a result, the Northeast wraps around East Bakersfield. In fact, Bakersfield enjoys more clear days than the majority of the U. Rainfall is low in the city, however, averaging only 6. The official time frame for tule fog to form is from November 1 to March

An uncle urged him to study chemistry. Marvel attended Illinois Wesleyan University from to He graduated with an A. He obtained the nickname "Speed" early on in his career as a chemist from his habit of rushing to breakfast after studying all night. While at Illinois, Marvel became a friend of fellow student Wallace Carothers. As the war cut off previous sources of supply, it became difficult to obtain many of the chemicals used in synthetic organic chemistry and related industrial processes. Clarence Derick set up the Organic Chemical Manufactures unit at Illinois to make and sell chemicals that had previously been imported from Germany. From to Marvel worked at the production unit under Roger Adams. His work in the Organic Chemical Manufactures unit gave him extensive experience in chemical preparation. Marvel was known for his ability to modify poor procedures to make them more effective, and to describe procedures so that others could follow them. Many of these laboratory procedures were later published, first as pamphlets on Organic Chemical Reagents, by Roger Adams, O. Marvel, and later in the journal Organic Syntheses. He was an enthusiastic contributor to Organic Syntheses. He developed organic chemical reagents to be used in the characterization, identification, and analysis of chemical compounds. Much of this research was carried out before techniques such as Infrared spectroscopy or Mass spectrometry were developed: Using techniques such as determinations of elemental analysis, average molecular weight, end-group analysis, and examination of products, Marvel demonstrated a chemical methodology for establishing the principal structural features of polymers. Nichols Medal from the American Chemical Society in Matthews that polysulfones could be formed by the reaction of sulfur dioxide and ethylene, Marvel confirmed the finding, using cyclohexene rather than ethylene. Houtz, when Houtz was developing a synthetic fiber made from polyacrylonitrile , Orlon. The availability of rubber was essential to the war effort. Marvel and his group developed this idea further, creating a cold rubber process for American industry. Fuson , with making the organic chemistry program at Illinois "preeminent in the United States". Sparks , [2] Samuel M. In , he was awarded an Honorary D. High temperature polymers[edit] Marvel made important advances in the development of high temperature polymers, including polybenzimidazoles and ladder polymers, using techniques of polyaddition and cyclopolymerization. Air Force needed a material suitable for drogue parachutes. They needed a material that would retain its strength when subjected to extremely high temperatures. Researching high-temperature stable polymers, Marvel was the first to synthesize Polybenzimidazole PBI , a condensation polymer with aromatic and heteroaromatic repeating units. He then worked with Herward Vogel, first at the University of Illinois and later at the University of Arizona, to improve the quality of the polymer and develop Polybenzimidazole fiber. His work is therefore considered "an important milestone in the history of PPP synthesis. Air Force program on high temperature polymer synthesis, including the synthesis of thermally stable ladder or partial ladder polypyrrones.

By train[edit] Atlanta is served by Amtrak [33] The Atlanta Amtrak station is located at Peachtree St. The stop on the same side of the street goes south to the Arts Center, or cross the street to connect with a northbound bus to the Buckhead Station. There is no on-site parking at the Amtrak station, but Elite Parking [34] has a surface lot nearby and offers longterm parking at reasonable rates. By bus[edit] Greyhound Bus Lines [35] , , provides bus service to Atlanta from many locations throughout the United States. The principal interstates serving the city are I serving traffic from Detroit to Florida , I connecting the Mid-Atlantic to Montgomery and I connecting Texas to South Carolina , all of which cross through Downtown. I commonly called the Perimeter by Atlantans, and the Atlanta Bypass on overhead signs circles the city at a distance of about 10 miles out, crossing and connecting with all the above freeways as well as the airport. Free real-time traffic information is available by dialing anywhere in the state of Georgia. North Springs is useful if staying north of Atlanta. It took 30 mins of driving around before I found a space. Get around[edit] Although most locals rely on their cars for day-to-day transportation, walking, biking, and public transit are well suited for visitors. The major intown neighborhoods are quite walkable, and many attractions are easily accessible from public transit. It also opens up destinations that are difficult or impossible to access by public transit. However, having a car in Downtown or Midtown is often a hindrance where parking is scarce, and the lengthy rush hour is an exercise in frustration. Most of the intown neighborhoods are individually easy to walk around, with dense collections of bars, restaurants, and shops. In particular, getting around within Midtown, Downtown, Decatur, Buckhead, or the areas around the North Highland Avenue corridor in Eastern Atlanta including Virginia-Highland, Poncey Highland, Inman Park, and Little Five Points is usually quite easy; walking times rarely exceed 10â€™20 minutes, and buses or trains provide some relief for longer trips. Getting between those neighborhoods solely by foot is more difficult; for example, expect a 30â€™45 minute walk between Midtown and Virginia-Highland. The Atlanta BeltLine, a former mile railroad loop around the city, is in the process of being converted to pedestrian-friendly trails, parks, and public transit. The loop of Atlanta Beltline trails provides a quick and convenient walking or biking connection between many neighborhoods. Beltline trails currently exist on the east, west, and north side of the city, stretching a total of 2. Bicycling inside the City of Atlanta can be easy or difficult, depending on the neighborhood and route. Bike rentals exist in the core of the city through Relay Bike Share. The eastern side of Atlanta is the most bike-friendly part of the city, with many bike lanes, parks, and trails. When starting the journey by bus, tap the card at the fare post next to the driver. When starting the journey by train, tap the card at the fare gate; a free transfer to bus or rail is added to the card automatically. When transferring to a bus or train, simply tap your card again. The card uses RFID technology, so you can leave it in your wallet and just tap your whole wallet on the sensor. Buses accept fares in cash, but cannot issue transfers on fares paid in cash â€™ you must have a Breeze Card to obtain the transfer. These will easily save you money if you plan on making more than one or two trips per day. The system is quite safe regardless of the time of day, although there have been a handful of incidents of violent crime in the last decade, mostly in the areas outside the stations and not in them. Like in any other city or transit system, use common sense, stay aware of your surroundings during low ridership periods, and avoid train cars with no other riders or with only a couple of other riders. The rail network is comprised of four lines: Red, Gold, Blue, and Green. The Red and Gold lines run north-south, while the Blue and Green lines run east-west, forming a cross with Five Points Station in the center. The Red and Gold lines run on the same rails from a southern terminus at Hartsfield-Jackson airport through Downtown and Midtown Atlanta, before splitting into two branches: The Blue line runs from a western terminal at Hamilton E. Holmes to an eastern

DOWNLOAD PDF SPECIALITY PRODUCTS AND SERVICE ACTIVITIES
VOLUME EDITORS, C.W. ROBINSON AND JOHN A. HOWELL.

terminal at Indian Creek. The Five Points station in downtown Atlanta is the only station where passengers can transfer between all rail lines. Trains run on all lines every 12 minutes during peak periods, and every 20 minutes at night and on weekends. Note that the wait is often shorter than this for trips in the center of the city, as you will not have to wait for any specific train; you could take either the Red line or the Gold line to get from Downtown to Midtown, for example. The bus network comprises over one hundred different bus routes, with many routes operating approximately every 20 minutes. Bus service on some lines generally including the most popular tourist areas runs from 5AM until 1: Bus Routes[edit] In addition to the train network, there are a few buses which are particularly useful for getting around some of the in-town neighborhoods: Although most trips along this corridor will be easier and faster using the train, this bus is still especially useful for getting to a destination between Arts Center Station and Buckhead, including the Buckhead Village, which is minute walk from Buckhead Station. Beyond Virginia-Highland, this bus continues north and then east, stopping at Emory University, then traversing many residential neighborhoods before ending at Avondale Station east of Decatur. Before turning onto North Highland Avenue, this bus runs roughly parallel to Highland Avenue in close proximity, and it follows North Highland Avenue through its most active areas, so this is a good route to get between destinations along that corridor. Once an hour, however, the bus will continue along Ponce instead of turning down North Highland Avenue and eventually reach Decatur Station. This route is useful for getting to parts of North Highland Avenue and to Little Five Points both of which will be short walks regardless of which route the bus takes , and the hourly detour can be useful as well for reaching parts of Decatur which are further removed from the MARTA station. Turns north along Howell Mill Road and continues into far northwestern parts of the city. This can be useful for getting to the west end of Georgia Tech campus or for getting to the fairly recently developed West Midtown district near Howell Mill and Marietta Street and continuing for some time along Howell Mill , where many restaurants, boutique shops, bars, coffee shops, and art galleries are located. It first travels along Moreland Avenue which becomes Briarcliff Road, on which it continues with stops in Little Five Points providing a shortcut there if the 10â€”15 minute walk is too much offering short walks to much of Poncey Highlands. Note for weekend travel: MARTA runs slower on the weekends. Typical wait times are 20 minutes for trains and up to an hour for buses. Be sure to plan ahead and look at schedules. By taxi[edit] It is usually possible to flag taxicabs down near tourist attractions and bars in Midtown and Downtown. However, calling ahead is recommended. Be sure to insist on the flat rate, even if the driver claims no knowledge of it. By car[edit] Cars are the most popular form of transport to get around the sprawling city, and usually the fastest during non-peak hours. Many destinations outside the urban centers are only accessible by car. Rush hour peaks around 6: In most of the city, though, parking is free and plentiful. Free road maps are available at [42]. Real-time traffic information is available from the Georgia DOT at [43] or by dialing from any phone. Street names in Atlanta are very confusing. There are more than 70 streets that have "Peachtree" in their name, and they are often difficult to distinguish Peachtree Street, Peachtree Lane, Peachtree Circle, etc. When someone says "Peachtree" without clarifying, they mean Peachtree Street, a major north-south thoroughfare through Downtown, Midtown, and Buckhead. Making matters worse, Atlanta puts cardinal suffixes on every road, defining in which "quadrant" used loosely of the city the address is located. They are necessary; the same number is sometimes a valid address on two streets that differ only by their suffix. Civil War buffs will enjoy the year old Atlanta Cyclorama in Buckhead, which tells the story of the Battle of Atlanta through a massive, continuous, circular painting. The largest collection of Civil War memorabilia in the nation can be found at the Atlanta History Center in Buckhead , along side a large exhibit memorializing the Centennial Olympic Games. Carlos Museum [47] , located on the campus of Emory University is an excellent attraction for those interested in the Greek and Egyptian cultures. The museum houses the largest collection of Greek, Egyptian and Near East artifacts in the southeast. Those with more refined tastes can enjoy the High Museum of Art in Midtown , which displays fine art from the last two centuries, as well as modern and contemporary pieces. Williams Paper Museum [53] on the Georgia Tech campus, are both rather intriguing free exhibits on their respective

DOWNLOAD PDF SPECIALITY PRODUCTS AND SERVICE ACTIVITIES VOLUME EDITORS, C.W. ROBINSON AND JOHN A. HOWELL.

themes. Travelers planning to visit multiple attractions may benefit from Atlanta CityPASS [54] , which grants admission to 5 Atlanta attractions within 9 days of first use for a much reduced rate and includes expedited entry in some cases. The included attractions are: Performing arts[edit] All types of performing arts can be found in Atlanta, such as the Atlanta Ballet [55]. Founded in , it is the oldest professional dance company in America, the largest self-supported arts organization in Georgia and the official Ballet of Georgia. Its annual season is presented at the historic Fox Theatre [56] , including the holiday season favorite "The Nutcracker. Opera fans can enjoy the Atlanta Opera [57]. Founded in , the Atlanta Opera has won numerous awards both nationally and locally. The Atlanta Symphony Orchestra [58] is recognized for its creativity and innovation internationally. It is also known as a wonderful training ground for musicians who go on to stellar careers with other orchestras. Regular orchestral performances can also be caught at the new Verizon Wireless Amphitheatre. Atlanta has one of the most impressive theater communities in the United States with more than 65 active performance groups. Metro theaters present a variety of new and old works. Other highlights include Broadway musicals through Broadway in Atlanta [61] and Theater of the Stars [62] , improvisation, southern themes, political and human issues, contemporary, classic and, of course, Shakespeare. Architecture[edit] Explore the cityscape and enjoy the many pieces of architecture built all around Atlanta, from the skyscrapers of Midtown , to the Downtown skyline, to the houses on Highland Avenue, to the mansions of Buckhead. Atlanta has a rich assortment of skyscrapers, notable for their modern aesthetic and the abundance of spires. The Bank of America building in midtown rises to a height of feet making it the tallest office building in the country outside of New York or Chicago. A recent building boom has left Atlanta glittering with dazzling glass skyscrapers, many of which contain some of the most expensive condominiums in the country. That said, the city owes a sizeable portion of its modern cityscape to home-grown architect John Portman. The construction of the icon Westin Peachtree Plaza Hotel helped steer Atlanta in a more urban direction. Portman, famous for the development of the hotel atrium also designed numerous other buildings in Atlanta, including the Hyatt Regency, the Marriot Marquis, and AmericasMart. Atlanta also has a few view points where you can enjoy a degree view of the city in Downtown. One of them is the Sundial atop the Westin Peachtree. Replacing the Georgia Dome, the newly built stadium has a retractable roof, and capacity for 80,000 spectators. The Atlanta Braves play their home games at a brand-new stadium, shared with Kennesaw State University, in the northern suburb of Kennesaw.

Chapter 7 : Atlanta - Wikitravel

Comprehensive Biotechnology: The Practice of Biotechnology: Speciality Products and Service Activities (1st Edition) by Dr. Murray Moo-Young (Editor), Campbell W. Robinson, John A. Howell, C.W. Robinson (Editor), J.A. Howell (Editor).
