Bunny Attack tried to hit The Piecemaker with its hammer but it had no effect. Basenji drove straight over the back of Techno Trousers who appeared to have mobility problems. Basenji drove under The Piecemaker and slammed it into the Disc of Doom trigger before attacking the sluggish Hannibal. Basenji then got under Techno Trousers and pushed it aside. Refbot counted Techno Trousers out and Sir Killalot picked the beaten machine up and spun it around before letting it go. Hannibal had also broken down and started smoking. Bash pushed Techno Trousers onto the floor flipper. At the same time, Bunny Attack was pushing The Piecemaker towards the flipper as well. Techno Trousers Edit Basenji dives into the pit For this match, Hannibal replaced its lifting forks with ramming spikes. Bunny Attack once again attacked the much smaller Piecemaker, hitting it with its hammer while Basenji pressed the pit release button. Basenji rammed into Hannibal and pushed it into the wall near the pit. Hannibal drove away but Basenji drove right behind Refbot straight into the pit. Dead Metal buried its saw into The Piecemaker, spraying showers of sparks. Bunny Attack got behind Hannibal and hit it several times with its hammer. Hannibal drove away and Bunny Attack gave chase. Hannibal pressed the disc of doom trigger and Bunny Attack rammed Hannibal again, only to get caught on the steam pit. The judges chose to eliminate The Piecemaker. Bunny Attack drove onto the Disc of Doom which then spun up. Bunny Attack was spun around and thrown off of the disc. Hannibal rammed into Bunny Attack, bending its own spikes in the process. Hannibal and the house robots continued to attack Bunny Attack, ripping up its fur. Bunny Attack escaped and hammered Hannibal one more time as Shunt pressed the pit release button. Both robots appeared to be running out of power as time ran out. The judges decided that Hannibal had won the battle and the Annihilator. Tell us what you took. You put the carrot there and they took it back.

As the Annihilator of Time he is also capable of powers rivalling even the most skilled Chronomancers, and is capable of quickly healing attacks outside of his weak point. His weak point is obviously his core Power Crystal, but attacking it is difficult due to the mech's high ambulance.

This original version of "Annihilator" was released on the special edition of the album Schizo Deluxe. This lineup lasted a year, producing a demo titled "Welcome To Your Death" during their time together. The demo received worldwide recognition and became highly sought after. After John Bates and Dave Scott left the band before its release, citing "artistic differences" and "personality conflicts", Jeff Waters and drummer Paul Malek recorded another successful demo titled Phantasmagoria in . A third demo was recorded by Waters and Malek in and was sent only to labels. It included more songs that would end up on the first two Annihilator studio albums. Waters relocated to Vancouver in , where he assembled an entire line-up, including drummer Ray Hartmann and former D. Once the album was finished, he hired bassist Wayne Darley and guitarist Anthony Greenham. Rise to fame [edit] Annihilator gained more recognition in the metal community with the release of their debut album, Alice in Hell , in . After opening up for Judas Priest , and then little-known Pantera and headlining tours around the world, Hartmann and Pharr left the band and were replaced by Mike Mangini though the band would find a more permanent replacement in Randy Black and Aaron Randall, respectively. The band was signed to Sony USA by this point. Bassist Wayne Darley had to leave the band in August as he was unable to enter Japan, where the band was touring in support of the album. Annihilator was among the many metal bands dropped by Roadrunner Records and most other labels that year. Brief hiatus and later years [edit] Annihilator temporarily dissolved, but Jeff Waters kept the band name going when he, along with drummer Randy Black, recorded and released King of the Kill in . Jeff Waters continued performing lead vocals until . By the time Remains was being recorded, Waters was the sole remaining band member. The album featured an electric drum machine programmed by Jeff Waters, of course and there was no tour in support of it. Reunion with Randy Rampage and Joe Comeau era [edit] Inspired after seeing Slayer perform in Vancouver in the summer of , Waters decided to reunite the Alice in Hell line-up to record another album. All members apart from Wayne Darley, who had health problems, agreed to reunite. This lineup released Criteria for a Black Widow and toured successfully. However, Rampage was fired following the tour for his erratic and often drunken behaviour. Then- Overkill guitarist and former Liege Lord frontman Joe Comeau requested to replace him during the tour, while Curran Murphy replaced Davis on guitar and Randy Black rejoined on drums. During the early s, Annihilator released the albums Carnival Diablos and Waking the Fury , both triumphant thrash metal masterpieces. In , Annihilator released their twelfth album Metal. Annihilator returned to Canada for two live shows, making it the first time since that the band had played live in North America. Annihilator released their fourteenth studio album entitled Feast on 23 August . Dave Padden left the band sometime in December via a phone call to Jeff Waters, informing him of his desire to step away from the constant touring in order to spend more time with his family. Waters unsuccessfully attempted to persuade Padden to remain in the band, offering him a pay rise. He later admitted in a German radio interview to being emotionally shaken by the departure. After a number of weeks searching for a replacement vocalist, Waters decided that he would handle vocals himself once again, in addition to doing everything but play drums in the studio. Never, Neverland singer, Coburn Pharr surprised audiences when he returned for a short time on Tons of Metal concert in January . By April , Annihilator had begun work on their fifteenth studio album. Fabio Alessandrini joined Annihilator shortly thereafter. That kind of is the opposite of what I used to do in the earlier days. And they remained heavy back then; the choruses would end up being heavy. So you really heard a song that had a lot of the Master of Puppets era of music from Metallica , and you really heard a Megadeth -y song on there, and you really heard in my vocals some Hetfield and Mustaine -isms. And I think that was great, as a fan, to get it out, but I think I need to do more of my own thing on the next record.

All five robots quickly converged into the centre of the arena with Razer turning to attack Spawn of Scutter. As plucky as ever, to take on Razer! Behemoth abandoned Attila the Drum to lift up Spawn of Scutter and both scoop-wielding robots forced Razer and Spawn of Scutter over the flame pit, nearly turning them over. Razer takes Spawn of Scutter in a grizzly grip, and Attila the Druuuuuuum Onslaught then flipped Razer as its wings reached their highest degree, turning it onto its other side. Behemoth then intercepted, but the inverted Razer clung onto its scoop, even when Onslaught lifted it up. Spawn of Scutter eventually separated Razer from Behemoth and pushed it back towards the flame pit, where it eventually righted itself. It then grabbed hold of Onslaught just underneath its scoop, but Behemoth broke the two apart. Razer turned its attention to Behemoth, but just missed crushing through its side armour. If in trouble, run away, run away, live to fight another day. Onslaught overturned Razer whilst it was distracted, only for Behemoth to turn it over too. It barged underneath Attila the Drum regardless as Spawn of Scutter pushed Razer back onto its wheels. Razer dodged away from the other robots as Spawn of Scutter pushed underneath Attila the Drum, before turning on Behemoth, who seemed to be lacking full mobility. It managed to grab Behemoth right behind its scoop, but only managed to crumple it a bit. Razer let Behemoth go, only to attack from the side and cut straight through its side panel. As the other three robots engaged in a minor shoving match, Razer let Behemoth go again, but its mobility problems meant it could do nothing to prevent Razer crushing through the side panel again. Behemoth was now showing no signs of mobility and Razer pushed it across the arena as the other three robots stayed out of the way. This was until Spawn of Scutter, still stuck in reverse, rammed into Razer, followed by Onslaught and Attila the Drum. As Razer released it, Behemoth gained a minimal amount of mobility, but Spawn of Scutter suddenly stopped moving after Razer let go of it. Onslaught rammed into Attila the Drum, narrowly missing a mace blow, whilst Sgt Bash grappled hold of Behemoth just before Cease was called. Spawn of Scutter, have they survived? We just seem to have lost either reception or power from the receiver to the rest of the robot.

June 22, - 2 years 4 months ago The Annihilator is one of the final bosses in the game. He is a hulking fellow, with a very large mace that he likes to charge with electricity. Edit Phase One The boss has several phases, each with him getting a bit tougher. The first is fairly easy. He will swing his mace at you in a few different styles. Although these can be blocked, the amount block will depend greatly on your shield and the lightning damage it blocks. This phase should just have you dodging around and taking quick stabs at him between his swings. Avoid the end of his mace at all costs, as it hurts, even in heavy armor. Edit Phase Two During the second phase of the battle, the boss will be able to throw his mace in a straight line towards you. The wind up animation is very clear when he is doing this. It takes seconds to wind up, and then the boss stands still for seconds as he waits for his mace to return. This new attack, is actually his greatest weakness, as the cooldown is so long that you can get in close and strike him several times with no worries of retaliation. Edit Phase Three During the third phase, he gains a very annoying attack. He will call down lightning to strike himself, then sends it out to hit you. The reason this attack sucks is due to the stun. When the screen flashes you get stunned, and are virtually guaranteed to be hit by the attack. Other than this, his pattern remains the same, so hit him during his down time after throwing the mace, or a quick hit in between his melee combos. Edit Phase Four The final phase will see no new attacks added, but you will notice that lightning now surrounds the boss. This is just to indicate that he is going to hit harder now. His melee attacks pack an extra punch, so be cautious and choose your shots wisely.

Development[edit] General John T. Thompson , who originally envisioned an " auto rifle " semi-automatic rifle to replace the bolt action service rifles then in use. While searching for a way to allow such a weapon to operate safely without the complexity of a recoil or gas operated mechanism, Thompson came across a patent issued to John Bell Blish in based on adhesion of inclined metal surfaces under pressure. Ryan , and started the Auto-Ordnance Company in for the purpose of developing his "auto rifle". It was primarily developed in Cleveland, Ohio. Payne, and George E. By late , the limits of the Blish Principle were discovered: It was found that the only cartridge currently in U. Thompson then envisioned a "one-man, hand-held machine gun" in. Payne designed the gun itself and its stick and drum magazines. The project was then titled "Annihilator I" and by , most of the design issues had been resolved. However, the war ended two days before prototypes could be shipped to Europe. While other weapons had been developed shortly prior with similar objectives in mind, the Thompson was the first weapon to be labeled and marketed as a "submachine gun". It was available to civilians, although poor sales resulted from the expense of the weapon: M Thompsons were sold in small quantities to the United States Postal Inspection Service [24] to protect the mail from a spate of robberies [25] and to the United States Marine Corps. Federal sales were followed by sales to several police departments in the US and minor international sales to various armies and constabulary forces, chiefly in Central and South America. It was popular with the Marines as a point-defense weapon for countering ambush by Nicaraguan guerrillas , and led to the organization of four-man fire teams with as much firepower as a nine-man rifle squad. The remainder made their way to the Irish Republican Army by way of Liverpool and were used in the last month of the Irish War of Independence " There were two military types of Thompson SMG. The MA1 had provisions for box and drum magazines. It had a Cutts compensator , cooling fins on the barrel , employed a delayed blowback action and its charging handle was on the top of the receiver. The M1 and M1A1 had a barrel without cooling fins, a simplified rear sight, provisions only for box magazines, employed a straight blowback action and the charging handle was on the side of the receiver. The Thompson had to be cocked, bolt retracted ready to fire, to attach the drum. It attached and detached by sliding sideways, which made magazine changes slow and also created difficulty in clearing a cartridge malfunction "jam". Reloading an empty drum with cartridges was an involved process. In contrast, the "XX" twenty-round box magazine was light and compact, it tended not to rattle, and could be inserted with the bolt safely closed. It was quickly attached and detached and was removed downward, making clearing jams easier. The box tripped the bolt open lock when empty, facilitating magazine changes. An empty box was easily reloaded with loose rounds. However, users complained it was limited in capacity. In the field, some soldiers taped two "XX" magazines together in what would be known as "jungle style" to speed magazine changes. Testers considered both superior to either the "XX" box or "L" drum. The round box was approved as standard in December to replace the "XX" and "L" magazines. Australian soldiers equipped with Thompson submachine guns at Tobruk , September 8, M1 development[edit] The staff of Savage Arms looked for ways to simplify the MA1, producing a prototype in February which was tested at Aberdeen Proving Ground in March ; Army Ordnance approved adoption as the M1 in April M1s were made by Savage Arms and by Auto-Ordnance. M1s were issued with the round box magazine and would accept the earlier round box, but would not accept the drum magazine. John Wisbur Bartlett Sr. The Thompson was used in World War II in the hands of Allied troops as a weapon for scouts, non-commissioned officers corporal , sergeant , and higher , and patrol leaders, as well as commissioned officers, tank crewmen, and soldiers performing raids on German positions. In the European theater, the gun was widely utilized in British and Canadian commando units, as well as in the U. Army paratrooper and Ranger battalions , where it was issued more frequently than in line infantry units because of its high rate of fire and its stopping power, which made it very effective in the kinds of close combat these special operations troops were expected to undertake. Military Police were fond of it, as were paratroopers,

who "borrowed" Thompsons from members of mortar squads for use on patrols behind enemy lines. Through Lend-Lease, the Soviet Union also received the Thompson, but due to a shortage of appropriate ammunition, its use was not widespread. They used the Thompson extensively in jungle patrols and ambushes, where it was prized for its firepower, though it was criticized for its hefty weight and poor reliability. Difficulties in supply eventually led to its replacement in Australian Army units by other submachine guns such as the Owen and Austen. New Zealand commando forces initially used Thompsons but switched them for the more reliable, lighter, and more accurate Owen during the Solomon Islands and Guadalcanal campaigns. Marines also used the Thompson as a limited-issue weapon, especially during their later island assaults. The Thompson was soon found to have limited effect in heavy jungle cover, where the low-velocity. In , the Army had rejected the. Army, many Pacific War jungle patrols were originally equipped with Thompsons in the early phases of the New Guinea and Guadalcanal campaigns, but soon began employing the Browning Automatic Rifle in its place as a point defense weapon. The opposing Communist fighters of the Democratic Army of Greece were also using Thompson submachine guns, either captured from government forces or inherited from ELAS. ELAS was the strongest of the resistance forces during the period of Greek Resistance against the Germans and Italians and were supplied with arms from both the British and the United States. After the demobilization of ELAS, an unspecified number of arms were not surrendered to the government but kept hidden, and were later used by the Democratic Army of Greece. Captured examples were later used by Indonesian forces against Dutch forces. During the Korean War, American troops were surprised to encounter Chinese Communist troops heavily armed with Thompsons, especially during surprise night assaults. Many of these weapons were captured and placed into service with American soldiers and Marines for the balance of the war. During the Vietnam War, some South Vietnamese army units and defense militia were armed with Thompson submachine guns, and a few of these weapons were used by reconnaissance units, advisors, and other American troops. It was later replaced by the M16 assault rifle. Not only did some U. The Viet Cong liked the weapon and used both captured models as well as manufacturing their own copies in small jungle workshops. They were then captured and used by the Khmer Rouge. In the conflict in Northern Ireland, known as the Troubles, the Thompson was again used by the Irish Republican paramilitaries. The FBI used Thompsons until they were declared obsolete and ordered destroyed in the early s. There were fewer than 40 pre-production prototypes. In, the U. Navy ordered Thompsons but requested a lower rate of fire. Thompson requested Payne develop a method of reducing the cyclic rate of fire. This was one of the major complaints about the weapon by U. Army personnel to whom it was issued. In addition, the gun performed better than most after exposure to rain, dirt, and mud. When the trigger is depressed, the bolt is released, traveling forward to chamber and simultaneously fire the first and subsequent rounds until either the trigger is released or the ammunition is exhausted. This eliminates the risk of "cook-off", which can sometimes occur in closed-bolt automatic weapons. Disassembly[edit] The Thompson submachine gun varies in field strip procedure, depending on the variant. When opened up, the Thompson features a small number of parts that need to be removed including the spring, bolt, Blish Lock, and actuator bolt.
