No game should ever use them. Nothing else though, and that includes episodic games on a wider time-frame, should be allowed to use them. Never though is it a good idea. On the surface, sure, that makes some sense. However, it comes with some major downsides in the case of gaming. To simply stop a story in mid-flight is a betrayal of the covenant made between developer and customer, that the story bought into will be the story told. In the celebrated words of the philosopher Aristotle: The same also applies to last minute screw-yous, like the character ending up in an asylum or wondering if it was all a dream Realms of the Haunting. That being said, even in those cases, there can be exceptions to the rule. If you walk away from a game feeling content and satisfied, the sequel can pick up on that point far better than some last minute betrayal or new impossible odds. Only occasionally does a game manage to pull it off, and in those cases only usually when the impossible odds are a known quantity up to that point. Mass Effect 2 for instance was always going to end with the Reaper invasion, which was fine because that was firmly presented as an inevitability and our goal throughout was something else. Conversely, Command and Conquer 4 had no choice but to pretend the ending of Command and Conquer 3 never even happened, in much the same way that players subsequently tried to forget there was ever a Command and Conquer 4. To Be Continued endings are bad for developers too though. Remember when it seemed a key decision? A character disappears on a quest, its resolution perhaps to be important later. The political system of a town cracking under the weight of rebellion, albeit holding for the time being, which it might be interesting to revisit after the inevitable happens. There are so many potential things to play with. At this point though, we get to the tricky problem of what makes a TBC ending versus what makes a satisfying ending where there is work yet to be done. To pick a non-gaming example everyone will know, look at Star Wars. By the time the credits roll, everything that was set up has been resolved. The Death Star, destroyed. This is the making of a satisfying story that still allows for proper sequalisation, with nothing that detracts from that victory, but endless threads we can get excited about seeing pulled in future. In general though, the rules need to be the same. Should that nature change though, it still needs to feel like an appropriate shift. In Halo for instance, the goal moves from surviving on Halo to exploring Halo to destroying Halo, but all of them still remain a in the same basic narrative space and b an escalation of the central exploration goal. But step forwards to Halo 2, and things go wrong. Here, your far more nebulous goal is "Finish the fight. It pulls an Empire Strikes Back, with nothing whatsoever properly resolved and millions left bitterly disappointed. Someone for instance thought that this was an ending. For the developers, it rounds off a coherent experience to hopefully be proud of, as well as offering the cleanest possible slate for the next game. For players, it underlines the value of the experience. There is no more guaranteed way to ensure a series dies on its arse and is forgotten. Really, about the only thing worse than one of those endings is getting no proper ending at all - the absolute worst thing you can.
