Uncovering the hidden harvest: Permanent link to cite or share this item: The purpose is to provide an overview of methods that may be used to assess the economic importance of forests to household livelihoods. The methods are presented with a number of examples of their use, most of them drawn from developing countries. The importance of an interdisciplinary approach is now well recognized, and non-economists are increasingly working in teams that include economists. Moreover, many non-economists are being asked to plan and execute projects that include an economic element. This book will provide the reader with the tools to understand the different approaches and methods and make more informed decisions as to which methods may be applicable. The book comprises of eight chapters: Bruce Campbell and Martin K. Towards understanding the role of forests in rural livelihoods. Quantitative methods for estimating the economic value of resource use to rural households. Understanding local and regional markets for forest products. Boxal and Tom Beckley. An introduction to approach and issues for measuring non-market values in developing economies. Veenan and Martin K. Economic decision-making framework for considering resource values: Nontokozo Nemarundwe and Michael Richards. Participatory methods for exploring livelihood values derived from forests: Luckert and Bruce M. Expanding our conceptual and methodological understanding of the role of trees and forests in rural livelihoods.
