**Subjects Description** This second edition of the Handbook of Victims and Victimology presents a comprehensively revised and updated set of essays, bringing together internationally recognised scholars and practitioners to offer substantial research informed overviews within their specialist fields of investigation. This handbook is divided into five parts, with each part addressing a different theme within victimology: Part I offers a scene-setting exploration of new developments in the field, enduring issues that remain relatively unchanged and the gaps and traps within the contemporary victimological agenda Part II examines of the complex dimensions to victim experiences as structured by gender, age, ethnicity, sexuality and intersectionality Part III reflects on the problems and possibilities of formulating policy responses in the light of the changing appreciation of the nature and extent of victimhood Part IV focused on the value of a comparative lens and the problems and possibilities of victim policies when seen through this lens, explored along three geographical axes: Europe, Australia and Asia Part V considers other ways of thinking about who counts as a victim and what counts as victimhood and extends the boundaries of the victimological imagination outward Building on the success of the previous edition, this book provides an international focus on cutting-edge issues in the field of victimology. Including brand new chapters on intersectionality, child victims, sexuality, hate crime and crimes of the powerful, this handbook is essential reading for students and academics studying victims and victimology and an essential reference tool for those working within the victim support environment. Reviews "This anthology is essential reading for anyone seeking a contemporary critical understanding of victimology. DeKeseredy, Anna Deane Carlson Endowed Chair of Social Sciences, Director of the Research Center on Violence, and Professor of Sociology, Department of Sociology and Anthropology, West Virginia University, USA "This broad-ranging volume is a significant contribution to victimological scholarship, building on the success of the first edition to extend its reach and scope and raising fundamental questions about how we view and treat victims of crime, and other social harms as an international community. Looking back into history, together with reflecting on contemporary victimisation and victim policy developments, the new edition offers a fresh and inspiring look at both old and new victimological issues and challenges. Moreover, it offers a valuable and much needed vision of the future of victimological theory and practice, which is well-structured and shaped in the form of an agenda for a critical victimology. Contrary, this second edition of the widely respected Handbook confirms that Victimology is now a unifying social science. Sandra Walklate and an array of authors stimulate thinking about victims of conventional and non-conventional crime, criminal victimisation, consequences of victimisation and responses individual and collective to crime and victimisation. It focuses on the plight of vulnerable and disenfranchised victims of domestic and transnational crimes. Further, it draws attention to current developments in law, policy and procedure. The Handbook is ideal to challenge undergraduate and post-graduate students with fresh research and new concepts. In fact, it is an engaging read for anyone with an interest in criminal victimisation. The numerous contributors share their insights about the suffering as well as the steps toward recovery of a wide variety of crime victims in a great many different societies. Taken collectively, the broad scope of these readings provides useful coverage of emerging concerns, enduring issues, theoretical matters, opposing views, policy alternatives, and proposed solutions to practical problems. **Chapter 2 : Victimology | RedShelf**

*This text provides an overview of the field of Victimology. The author examines emerging areas in the field, such as the consequences of victimization and empowering victims. The text includes both traditional and modern approaches to victims' issues and concentrates on issues affecting both victims.*

This book provides an introduction to the key debates within the area of victims and victimology. Victims and Victimology is suitable for courses at both undergraduate and postgraduate level. Victimology and crime prevention are growing, interrelated areas cutting across several disciplines. Victimology examines victims of all sorts of criminal activity, from domestic abuse, to street violence, to victims in the workplace who lose jobs and pensions due to malfeasance by corporate executives. Crime prevention is an important companion to victimology because it offers insight and techniques to prevent situations that lead to crime and attempts to offer ideas and means for mitigating or minimizing the potential for victimization. In many ways, the two fields have developed along parallel yet separate paths, and the literature on both has been scattered across disciplines as varied as sociology, law and criminology, public health and medicine, political science and public policy, economics, psychology and human services, and more. Two volumes containing approximately signed entries provide users with the most authoritative and comprehensive reference resource available on victimology and crime prevention, both in terms of breadth and depth of coverage. In addition to standard entries, leading scholars in the field have contributed Anchor Essays that, in broad strokes, provide starting points for investigating the more salient victimology and crime prevention topics. A representative sampling of general topic areas covered includes: Published in , the first edition of Forensic Victimology introduced criminologists and criminal investigators to the idea of systematically gathering and examining victim information for the purposes of addressing investigative and forensic issues. The concepts presented within immediately proved vital to social scientists researching victims-offender relationships; investigators and forensic scientists seeking to reconstruct events and establish the elements of a crime; and criminal profilers seeking to link pattern crimes. This is because the principles and guidelines in Forensic Victimology were written to serve criminal investigation and anticipate courtroom testimony. As with the first, this second edition of Forensic Victimology is an applied presentation of a traditionally theoretical subject written by criminal justice practitioners with years of experience-both in the field and in the classroom. It distinguishes the investigative and forensic aspects of applied victim study as necessary adjuncts to what has often been considered a theoretical field. It then identifies the benefits of forensic victimology to casework, providing clearly defined methods and those standards of practice necessary for effectively serving the criminal justice system. Lisa Growette Bostaph Language: This multidisciplinary approach to crime victimization, crime victims, and victim services includes chapters written by authors from a variety of disciplines: Within each chapter, chapter highlights provide more in-depth information on a central concept, spotlights on pioneers in the field, and real world applications that demonstrate how the topic is currently being addressed in communities across the country. They lay out the sources of evidence available to victimology researchers. In later chapters, theory is woven together with the description of each topic and illustrated with specific examples. The second part of the book addresses the full impact of victimization. Part III, Types of Victimization, details specific problems ranging from violent crimes, child and elder abuse, and property crime to crime in the workplace. The authors emphasize their concern with the extent of criminal victimization, explain how obstacles hinder the pursuit of justice, and introduce the idea that reforms have rendered the system much more victim-friendly.
