

Chapter 1 : Easy to use Online PDF editor

Objective. The objective of this tutorial is to learn how to edit an audio file. To achieve this objective, we are going to import an existing sound file, remove all but 10 seconds of this file, apply a 1-second fade-out at the end, export the results, and play it in your favorite audio player.

Add a new application to an existing virtual application package Before you update a package: The Managing Authority section is erroneously removed from the deployment configuration file when you update a package. Before starting the update, copy the Managing Authority section from the existing deployment configuration file, and then paste the copied section into the new configuration file after the conversion is complete. If you click Modify an Existing Virtual Application Package in the Sequencer in order to edit a package, but then make no changes and close the package, the streaming behavior of the package is changed. The primary feature block is removed from the StreamMap. Users who receive the edited package experience that package as if it were stream-faulted, regardless of how the original package was configured. Update an application in an existing virtual application package On the computer that runs the sequencer, click All Programs, point to Microsoft Application Virtualization, and then click Microsoft Application Virtualization Sequencer. On the Select Package page, click Browse to locate the virtual application package that contains the application to update, and then click Next. On the Prepare Computer page, review the issues that could cause the application update to fail or cause the updated application to contain unnecessary data. Resolve all potential issues before you continue. Important If you are required to disable virus scanning software, first scan the computer that runs the sequencer to ensure that no unwanted or malicious files are added to the package. On the Select Installer page, click Browse and specify the update installation file for the application. If the update does not have an associated installer file, and if you plan to run all installation steps manually, select the Select this option to perform a custom installation check box, and then click Next. On the Installation page, when the sequencer and application installer are ready you can proceed to install the application update so the sequencer can monitor the installation process. If additional installation files must be run as part of the installation, click Run, and then locate and run the additional installation files. When you are finished with the installation, select I am finished installing. Note The sequencer monitors all changes and installations that occur on the computer that runs the sequencer. This includes any changes and installations that are performed outside of the sequencing wizard. On the Installation Report page, you can review information about the updated virtual application. In Additional Information, double-click the event to obtain more detailed information. To proceed, click Next. On the Streaming page, run each program so that it can be optimized and run more efficiently on target computers. It can take several minutes for all of the applications to run. After all applications have run, close each of the applications, and then click Next. Note You can stop an application from loading during this step. In the Application Launch dialog box, click Stop, and then select either Stop all applications or Stop this application only. On the Create Package page, to modify the package without saving it, select the check box for Continue to modify package without saving using the package editor. When you select this option, the package opens in the App-V Sequencer console, where you can modify the package before it is saved. To save the package immediately, select the default Save the package now. Add optional Comments to associate with the package. Comments are useful to identify the application version and provide other information about the package. The default Save Location is also displayed. To change the default location, click Browse and specify the new location. On the Completion page, click Close to close the wizard. The package is now available in the sequencer. Modify the properties associated with an existing virtual application package On the computer that runs the sequencer, click All Programs, point to Microsoft Application Virtualization, and then click Microsoft Application Virtualization Sequencer. On the Select Package page, click Browse to locate the virtual application package that contains the application properties to modify, and then click Edit. In the App-V Sequencer console, perform any of the following tasks as needed:

Help for Manage Licenses The Manage Licenses page provides access to the first two of the three steps to redeem your VMware product licenses: Register your License Activation Code Activate software licenses by generating license files Install the license files to enable your products This page includes the following sections: My Product Licenses – Lists information on all the standard and additive VMware products that you have purchased. Click the name of the product in the Description column to view licensing details for a specific product. Depending on whether you logged in as a registered user, license administrator, or support administrator, different sets of licenses might be visible to you. My License Files – Lists information on all previously generated license files. Click the link in the Created On column to view details for or to retrieve a specific license file. If you have not created any license files, the My License Files section does not appear on the page. Use the links and buttons that appear on this page to perform the following actions: Register License Activation Code: Create and retrieve new license files: Click Generate New License File to activate available product licenses by generating and retrieving new license files. After you generate a new license file, it appears in the My License Files table of the Manage Licenses page. The numbers of activated and available licenses in the My Product Licenses table change accordingly. If you have activated all of your available product licenses, Generate New License File does not appear on the Manage Licenses page. Edit existing license files: Select a check box next to an existing license file you want to edit in the My License Files table, then click Edit. Use the Edit License File page to make any necessary changes to your license file. You can only edit one license file at a time. Combine multiple license files into a single license file: Select the check boxes next to the license files you want to combine into a single license file, then click Combine. Use the Combine License Files page to review and retrieve your combined license file. You cannot combine license files that use different licensing models, or contain product licenses from different product families. Delete existing license files: Select the check boxes next to one or more license files you want to delete, then click Delete. Use the Delete License Files page to review and confirm your selection for deletion. You cannot delete more than five license files at a time. After you delete the license file, the previously allocated licenses are released to the pool of available licenses and can be used again. The numbers of activated and available licenses in the My Product Licenses table adjust accordingly. Review and retrieve evaluation license files: Click the View Evaluation Licenses link to review and retrieve your evaluation license files.
